Subject: WIPP Information - For Call Today

Attached are the tables and graph for the station A and B data, and graphs showing the performance of the filtration system. I also included data from the lab on the environmental samples.

Below is some background info on actions taken after identification of the 61 dpm release on the 12th:

In response to the elevated 72 hour B Station decay data, Radcon conducted the following actions:

1. Performed geometric shielded surveys of the filter paper to determine if the contamination was evenly distributed or a spot source, which could indicate cross contamination from something such as a contaminated tweezer. The geometric analysis confirmed evenly distributed contamination across the filter paper, ruling out cross contamination.
2. We checked the A Station filter paper during the same time period and did not detect any abnormal readings compared to recent data.
3. We performed a spectrum analysis on an ISOLO for the two B Station filters, and both showed the same type of isotopes we have previously seen. (i.e. Am-241)
4. We checked the PAS sample data during the same time period from PAS sampler 1618, located adjacent to the CEMRC station approximately 40 feet from the B exhaust, and did not detect any abnormal readings compared to recent data.
5. We performed ground deposition surveys in the area surrounding the B exhaust, including south and east to the perimeter fence since that was the prevailing wind direction according to the CMR for this time period. We did not detect any contamination above background levels.

6. We are reviewing previous B Station data since 2/14/14 to see if any additional smaller increases detected correlate to a similar B Station flow transient. (Action Jim Satterfield and CMR)
7. We developed and issued Radiological Control and Dosimetry Timely Order Number 14-005, *Initial or Subsequent Count of Station B Filters*, which provides direction to RCTs on counting B Station filters and actions to take if initial count shows elevated levels compared to recent data, or with alpha to beta ratios greater than 2:1. It also provides direction for 8, 24, and 72 hour decay counts if decay patterns are not consistent with recent data. This will provide a much more timely notification of potential radiological issues with Station B. The CAM that will be installed soon on the B Station exhaust will provide additional timely notifications as well.
8. Discussed situation with Stewart Jones, Environmental, to determine if the South and East station environmental samples should be collected since the prevailing wind was predominantly blowing in their direction on 3/11-3/12/14.

As a reminder, the call-in number is (866) 723-6758, code 8040901#

Thanks

Oba

41-B-857 HEPA Bank and Waste Hoist Tower Differential Pressure

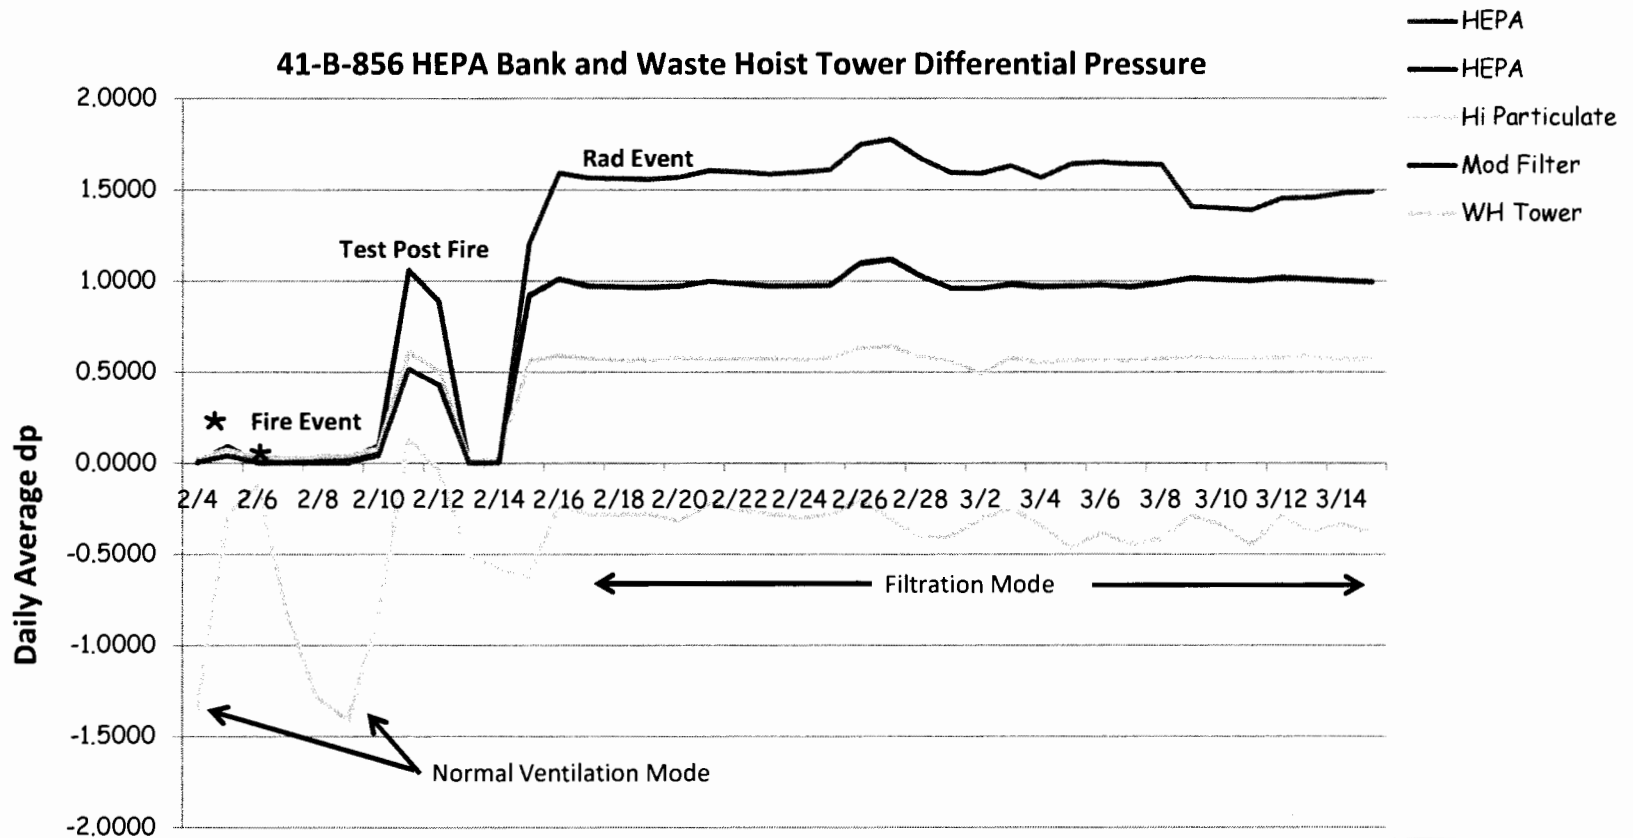

Prior to 2/5/2014 (2/3 @ 0200-0215)

857	Mod	0.45
857	High	0.75
857	HEPA	1.52
857	HEPA	1.45

*** Fire Event Waste Tower dp Details**

During the Fire Event positive dp was seen on 2/5 and 2/6. Overall the dp was negative for the daily average.
 2/5 Positive dp (Avg) + 0.308 (Duration 13 hrs)
 2/6 Positive dp (Avg) + 0.200 (Duration 14 hrs)

Prior to 2/5/2014 (2/3 @ 0200-0215)

856 Mod	0.47
856 High	0.75
856 HEPA	1.54
856 HEPA	1.45

*** Fire Event Waste Tower dp Details**
 During the Fire Event positive dp was seen on 2/5 and 2/6. Overall the dp was negative for the daily average.
 2/5 Positive dp (Avg) + 0.308 (Duration 13 hrs)
 2/6 Positive dp (AVg) + 0.200 (Duration 14 hrs)
