Dear Ms Kliphuis; Hazardous Waste Bureau

For reasons older than time as you know it, i represent the Inter-gallactic Confederation for Interplanetary Peace and the Legions of Living Light. As such, i stood as a party in the 1998 Hearings on the Draft Permit. ^{for WIPP,} In my conclusion i had to mention the vision of glowing TRU-PACs in the parking area, with a message that we may see this in our lifetimes. Also discussed other stuff about where air in the chambers would go when tons of salt and hardware come crashing down?? Can they reach critical mass?

These and many hydrological questions were ignored and the Site was forced to open without a permit, by politicians. Now the draft permit seems grossly inadequate to even get the waste out of the parking area let alone the ones in receiving areas? How many rooms have had complete roof colapses, and how many partial? This being set into motion, should also be understood, inevitable consequence of the entire unfeasible experiment.

Know when to say when. There is no way to contain the "waste" that is already in WIPP. Salt is a soft crystal and will crack and fracture easily. There was never a plan to deal with the toxic gas wastes that the other wastes were bound to create. How many of such gas pockets are already slipping through the salt? How are the "closure plans" working? Can you even vaguely consider approving the Draft Permit? The room closure plans, that is to say, have apparently failed and noone knows what will go wrong next.

The State of New Mexico was bullied into opening the facility and i fear that you really have no say about the endless expansion, or at least feel a deeper allegiance to all things with federal money attached over the people and environment. Will extortion win again? If the State tried to exercise any authority, if the Environment Department said no re-open without new-improved permit? They did not need a permit in the first place.

Sorry to share such unhappy predictions, they are messages from my sponsors. I will happily sit again as a party at your hearings and question any questionable scientific hypothesis, as they request.

Yours in Peace,

bonnie bonneau
