Subject: Update - July 14

Good morning.

NWP was able to get the diesel generator back in service late on Friday and completed the shaft and rope inspection for the Salt Shaft. Today the plan is to complete the shaft and rope inspection for the Air Intake shaft and then conduct an entry. The primary focus of the entry includes checking (reset if needed) and/or troubleshooting electrical breakers for several of the underground regulators (e.g., regulator 308) and they plan to check the fluid level in the waste shaft sump; they do not plan to take a sample just check the fluid level. I will send you an e-mail this afternoon on the developments/status.

Please call me if you have questions.

George T. Basabilvazo
