

Concerned **Citizen asking EPA to not Re-certify WIPP** in New Mexico
June 17, 2015

IT LEAKED; IT BREACHED; IT FAILED!

DO NOT RE-CERTIFY WIPP BECAUSE IT DIDN'T COMPLY WITH THE PROMISES.
IT WAS SUPPOSED TO LAST 10,000 YEARS AND IT FAILED IN 16 YEARS.

The EPA is not monitoring. The DOE is not monitoring. The information from an NMSU researcher showed that plutonium and americium were precipitated into the air shed. That is wrong.

A simple typo in the instruction manual led to the explosion of barrels underground at WIPP. What other mistakes have been made? This is too dangerous for the people and all species around WIPP. That is wrong.

The workers and their families and their co-workers and friends were not tested after their exposure to highly dangerous elements. That's wrong.

When someone handed me a bag of organic pecans grown in Carlsbad, I had to wonder if it was contaminated with particles from the WIPP failure last year. Over time the Carlsbad area could become a no-man's land with impacts on tourism and other businesses in the area. That's wrong.

Within 1 mile of WIPP there is oil drilling into the area that could become more unstable for the storage of such sensitive and terribly toxic materials

There must be a better way to make money in Carlsbad. Dallas decided to have lots of call centers to shore up their economy. Perhaps Google phone, Verizon, Sprint, AT&T could quickly make Carlsbad the call center capital of the US. There will be a creative solution for the people of Carlsbad to survive without having to sell their health and the genetic well-being of their future families.

Sometimes the EPA does the right thing. Here are recent examples:

Now a refinery near Borger, Texas, has been ordered to do a better job at leak detection and repair as ordered by US Attorney of North Dist. Of Texas. They have been fined \$200,000 and have an Environmental Compliance Plan.

EPA and NMED have cleaned up Willow Creek New Mexico buried by waste materials from Pecos/ Tererro Mine near the Pecos River.

**MAKE DE-CERTIFICATION OF WIPP ANOTHER SUCCESS STORY FOR THE EPA!
IT LEAKED; IT BREACHED; IT FAILED. FIX THIS NOW!**
