Mr. John E. Kieling, Bureau Chief
Hazardous Waste Bureau
New Mexico Environment Department
2905 Rodeo Park Drive East, Building 1
Santa Fe, New Mexico 87505

Subject Evidence of Mailing to the Waste Isolation Pilot Plant Facility Mailing List and Publications of Notification for a Class 2 Permit Modification Request, Permit Number NM4890139088-TSDF

Dear Mr. Kieling:

The purpose of this letter is to provide the New Mexico Environment Department with the information identified in 20.4.1.900 New Mexico Administrative Code (NMAC), incorporating 40 CFR 270.42(b)(2), regarding the following permit modification request:

- Class 2 Permit Modification Request (PMR) entitled Revise the RCRA Contingency Plan and Associated Emergency Response Personnel Training and Active Room Ventilation Flow Rate, submitted to the NMED on June 3, 2016

This evidence is included in Enclosure 1 and is summarized below:

- June 8, 2016, invoice from Mail Service Center, Carlsbad, New Mexico for duplication and mailing of the PMR to the facility mailing list
- June 8, 2016, Public Notice from the Albuquerque Journal
- June 8, 2016, Public Notice from the Carlsbad Current-Argus
- June 8, 2016, Public Notice from the Santa Fe New Mexican

We certify under penalty of law that this document and all attachments were prepared under our direction or supervision according to a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on our inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of our knowledge and belief, true, accurate, and complete. We are aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

If you have questions regarding this submittal, please contact George T. Basabilvazo at (575) 234-7488.

Sincerely,

Todd Shrader, Manager
Carlsbad Field Office

Libertarian slate deserves fair coverage

The press may want to ignore the Johnson-Weld ticket, but they should be treated as serious candidates

By ROBERT CRAWFORD

The Albuquerque Journal is a registered Libertarian.

According to the dairy industry, antibiotics are used to increase milk production. How do we know which kind of milk is best?

As a registered dietitian, I observe a lot of consumers who ask whether they should drink milk from cows treated with antibiotics. The most common questions I hear are: "How do we know which kind of milk is best?" or "What is the difference between organic milk and conventional milk?"

Milk is a natural food that is produced by mammals. Cows produce milk to nourish their young. Milk is a rich source of nutrients, including lactose (a form of sugar), proteins, vitamins, and minerals. However, not all milk is the same.

Organic milk is produced in accordance with organic farming standards. These standards may vary depending on the organization that sets them, but they generally require that the milk be produced without the use of synthetic pesticides, fertilizers, or growth hormones. Organic milk may also be produced without the use of antibiotics. However, in the United States, organic milk can be produced with antibiotics, but the use of antibiotics in organic milk is prohibited.

Conventional milk is produced in accordance with the standards set by the Food and Drug Administration (FDA). These standards allow for the use of antibiotics to treat sick animals, but they do not require the use of antibiotics. Antibiotics are used to treat sick cows in order to prevent the spread of disease and to ensure the safety of the milk.

Milk from cows treated with antibiotics can contain antibiotics, which may be harmful to human health. However, the levels of antibiotics in milk from treated cows are very low and are unlikely to pose a risk to human health. Antibiotics are mostly eliminated from the body within a few days, and any antibiotics that remain in the body are not present in sufficient quantities to cause harm.

Organic milk is often considered to be of higher quality than conventional milk. Organic milk is produced without the use of synthetic pesticides and fertilizers, which may make it more nutritious. Additionally, organic milk may be produced without the use of antibiotics, which may make it safer to drink.

Overall, the choice between organic and conventional milk is a matter of personal preference. Organic milk may be considered to be of higher quality, but it is more expensive. Conventional milk is less expensive, but it may contain antibiotics. Ultimately, the decision to choose one type of milk over the other is a matter of personal preference.

The key to making an informed decision is to understand the benefits and risks of each type of milk and to choose the type that best meets your needs.

How do we know which kind of milk is best?
Report: School suspensions decline

Students disproportionately suspended from K-12 public schools in the 2013-14 academic year, according to an Education Department report.

Suspensions of K-12 students
First-timers among Santa Feans who voted in primary
By Robert Nett
The New Mexican
A decade ago, the first time Santa Fe County registered voters aged 18 and younger were allowed to vote in state elections, not one 18-year-old cast a ballot, according to the earliest tally available from the New Mexico Secretary of State’s Office.

But a decade later, the 2019 tally from the Board of Elections and Risk Management shows 6,592 registered voters in Santa Fe County who are 18 to 21 years old, with 1,807 of those votes cast in the Nov. 5 general election.

And according to the New Mexico Secretary of State’s Office website, 2,138 of those 18-year-old or older voters were first-time voters, roughly 45 percent of the total vote for candidates who sought office in Santa Fe County.

Anita Monroy, 18, of Santa Fe, who voted at the Santa Fe County Courthouse with other 18-year-old voters last week, was one of those first-time voters.

"Being an 18-year-old and having the opportunity to vote was the most exciting thing to me," Monroy said.

"It was a little nerve-wracking knowing there were a lot of people my age voting for the first time," she said.

"We were kind of nervous out there in the car," Monroy said, "but I think we’re just as excited as we were when we were in high school and we thought that we were old enough to vote."
