Re: PUBLIC NOTICE No. 20-03 - New Shaft at the Waste Isolation Pilot Plant

Dear Mr. Maestas:

I object to the proposed permit modification for the construction of a new shaft and associated drifts (tunnels) into the Waste Isolation Pilot Plant (WIPP) underground. I also object that the New Mexico Environment Department (NMED) has authorized the construction of the shaft seven weeks before the draft permit was issued and long before the public hearing will be held.

To make matters worse, NMED has provided little vital information in Spanish, the fact sheet for the draft permit doesn't tell the public that the shaft is already being built, and continues to claim that the shaft is needed for air flow in the current underground repository. Allowing the Department of Energy (DOE) to start digging the shaft before required public participation is complete and before the permit has been issued, makes it clear that public process on WIPP, is neither supported by nor respected by NMED.

It is clear there is no emergency requiring NMED to issue a temporary authorization for shaft construction. In fact, nearly two years before the new shaft and drifts are finished, the New Filter Building will provide over 100% of the air that workers need in the partially contaminated underground.

The new shaft is actually for new underground waste rooms that could more than double the disposal area. DOE needs this space because the existing, permitted panels will be filled in a few years.

The new shaft is all about expanding WIPP for more waste and more kinds of waste, including:

- high-level radioactive waste from Hanford, Washington and other sites;
- weapons-grade plutonium from the Savannah River Site in South Carolina;
- commercial waste from West Valley, New York; and
- 50 years or more of waste from building new nuclear weapons.

In 1999 and before, DOE promised the New Mexicans that WIPP would operate for 25 years and, as its current permit requires, close in 2024. The DOE says now it needs to keep WIPP open forever.

It's time for NMED to support the People of New Mexico and ensure DOE keeps its promise to us. NMED must withdraw the temporary authorization, stop drilling the shaft and must then deny the modification request itself.

Thank you for your careful consideration of my comments.

Re: PUBLIC NOTICE No. 20-03 - New Shaft at the Waste Isolation Pilot Plant

Dear Mr. Maestas:

The proposed permit modification for the construction of a new shaft and associated tunnels into the WIPP site is unreasonable. The New Mexico Environment Department (NMED) has authorized the construction of the shaft seven weeks before the draft permit was issued and long before the public hearing will be held. This flouting of the regulations place on WIPP is wrong.

Additionally, NMED has provided little vital information in Spanish. The "fact" sheet for the draft permit doesn't tell the public that the shaft is already being built, and continues to claim that the shaft is needed for air flow in the current underground repository. NMED does not work for the Department of Energy (DOE) but does work for the people of New Mexico. Starting the shaft before required public participation is complete and before the permit has been issued, makes it clear that public process on WIPP, has not been performed. So why is NMED allowing it to happen?

It is clear there is no emergency requiring NMED to issue a temporary authorization for shaft construction. The new shaft is actually for expansion that could more than double the disposal area. DOE wants this space because the existing, permitted panels will be filled in a few years. The new shaft is all about expanding WIPP for more waste and more kinds of waste.

In 1999 and before, DOE promised New Mexicans that WIPP would operate for 25 years and, as its current permit specifies, close in 2024. The DOE says now it needs to keep WIPP open forever.

It's time for NMED to support the citizens of New Mexico and ensure DOE keeps its promise to us. NMED must withdraw the temporary authorization, stop drilling the shaft and must deny the modification request entirely.

Sincerely,

Mary Spargo Márquez
