November 6, 1995

Ms. Hoditschek:

The following is a very brief description the efforts which we are studying for possible implementation.

R. Marshall, Inc. (RMI) and Dominion Services, Inc. (DSI) are conducting research to develop the following:

- Feasibility study to determine possibility of utilizing an unreclaimed, abandoned potash mine for the management, storage, and disposal of industrial waste, plus other types of waste.
- Feasibility of development of on-site facilities for waste treatment, stabilization, solidification, and containment in an inert format.
- Possible Waste Candidates:
  - asbestos
  - lead-contaminated solids
  - hydrocarbons - solid
  - hydrocarbons - sludge
  - industrial / sludges
  - bio-remediation candidates
  - other wastes

Please note that these are being explored to determine the feasibility of storage and disposal; any or all may not be possible. We appreciate the opportunity to meet with you and look forward to further discussions on the 14th of November, 1995, at 10:00 AM.
