RECEIVED
OFFICE OF THE GOVERNOR
SANTA FE, NEW MEXICO

ref: putting whip into operation maintaining whip

1997 DEC 16 8 421

Governor Gary Johnson,

Gary my recent stay in Santa Fe and the resolution of felony complaint helped a situation sound to cost and jeopardy reputations. Of course you're welcome. I take pen in hand to explain things, nuclear and radio active waste things, because I can bring disposal revenue to the state. Radiation is not that difficult to handle. I could put a one truck, a transport company together to begin the steady flow of high paying waste to whip. No one will provide better equipment and trained crews. I can put good men to work. I'll show you the safety controls. I can bring federal revenue for disposing this atomic stuff into state treasury. Follows is concept. I can do everything but receive state approval to operate. Herein is my business plan.

What I can't secure: Disposal is safe. Packaging to insure no leak. Transport. Storage in the caves is nothing but material handling. Forklifts. Permits to pass over Federal and State roadways available. Escort thru major metropolitan. It's all possible. The people will change their minds when I demonstrate.

1. Boots, "Atomic man" is suited up in gear, participating with the filling of the highly specialized material transport containers. Boots checks each container with Gieger counter. I take the risk for all New Mexico.

The stuff is safe and remains safe for centuries... eons. Everybody reads technical report. Boots is out there making it safe. The men I employ do the same, New Mexicans keeping New Mexico safe. Building the state treasury. But that's not enough.

2. Its a men and equipment show. I buy new: FREIGHTLINER tractor, Great Dane Flatbed (spaced rear axle). I roll with two standard Government "containers". ~~The~~ (Container technology used in maritime.) The radioactive barrels are secured in the containers with wooden block and bracing. "X" number of barrels fill one container. Its a routine job. But my small, carefully controlled company, is out there with a camcorder recording Gieger counter activity. Highway permits are endorsed by US Dept of Energy. No one in the country can do this. I can.

971205

A container that starts safe ~~REMAINS~~ safe
till JESUS Christ comes back.

There is public hearing to get approval.

Don't get too impressed. Your dental hygienist checks
her dosimeter every afternoon. DOE provides all
support in disposal work tags in the radiation
environment. Me and my crew are glorified
grunt laborers with two wheel dollies and pre-cut
wood. Building the container for shipment, for eternity.
The job is done right or "I" get the radiation
poisoning. (I don't come back as Dr. No.) One-two
punch. what is #3, the establishing measure?

You and I might have begun on level ground,
at your coming to office. Right or wrong I have
told you how I feel you should be conducting
your office. I operate on dream. Works for me.

Early September I took nuclear disposal
to the Navajo nation. A vision showed Navajo
women, like singing to make work light in a Gallup
Burgerking, secure in putting nuclear waste in
Reservation land. Clear spirit into the land.

I will double verify the Governments minimum
standard of safety by New Mexico consulting engineering
companies. I'll do every little detail to include
air in the tires of the truck.

not I can't provide: → "Boots... "A. tomic man." I think you
are are not waisting your money
to bring this together. said Gary Johnson. "

You can't guarantee my monies spent will secure
this classy refuse work. But no one has come
to you and said.

the real risk is getting a safe load
on a truck. Risking their lives. It is
truly no more than a x-ray tech at
the VA. There is no room for error.
Nails don't fall out of framed houses. Do they?
Waste packaging doesn't undo with bad
Karma.

Its doable and payable.

what about
collision
& mishap?

ok at
aritime
& rail-
ad container
hology.
wont
en.

Few people will listen to my finality of invisioned
Navajo women. My friends in consulting firms Fail
would not let me do this, were it not safe. SAFED
oh. You nixed yourself shaving? No promises,
of man will guarantee: Good training and
execution provoke more sure performance.
We are in no hurry here. Dream said "Go for it." From jail.

will prove
s 100 times
New m.
è we afraid?
