Subject: FW: Secondary Containment Modifications at the Bloomfield Terminal
Attachments: 20190708072826689.pdf

Hi Pam-

Please include this in our Bloomfield record.

Thanks,
Leona

Subject: [EXT] Secondary Containment Modifications at the Bloomfield Terminal

Good Morning Ma'am!

I wanted to provide this e-mail as a follow-up to the phone message I left for you earlier today. As I briefly mentioned earlier, the Bloomfield Terminal is working to enhance the secondary containment capacity for the in-service storage tanks within the Tank Farm Area. These activities include modifying the above-grade containment walls by removing some of the above-grade soils and excess blow sands in several areas within the Tank Farm area. The existing interconnecting secondary containment walls we will be modifying are marked in orange on the attached Site Map. We would like to stock-pile the excess soils from these activities in the area east of Tank 36 (see area highlighted in yellow on the attached map) until such time that they may be of use to the facility. Since we are removing soils that are above the surface grade of the storage tanks, we do not anticipate that we will observe any impacted soils during these activities. However if we do observe soils that are discolored and/or appear to be impacted with hydrocarbons, we will segregate these impacted soils from the stock-pile area and will profile the impacted soils in preparation for off-site disposal.

If you have any concerns or questions regarding these activities, please let me know at your convenience. Thank you so much for your time, and I hope you have a great week!

Sincerely,

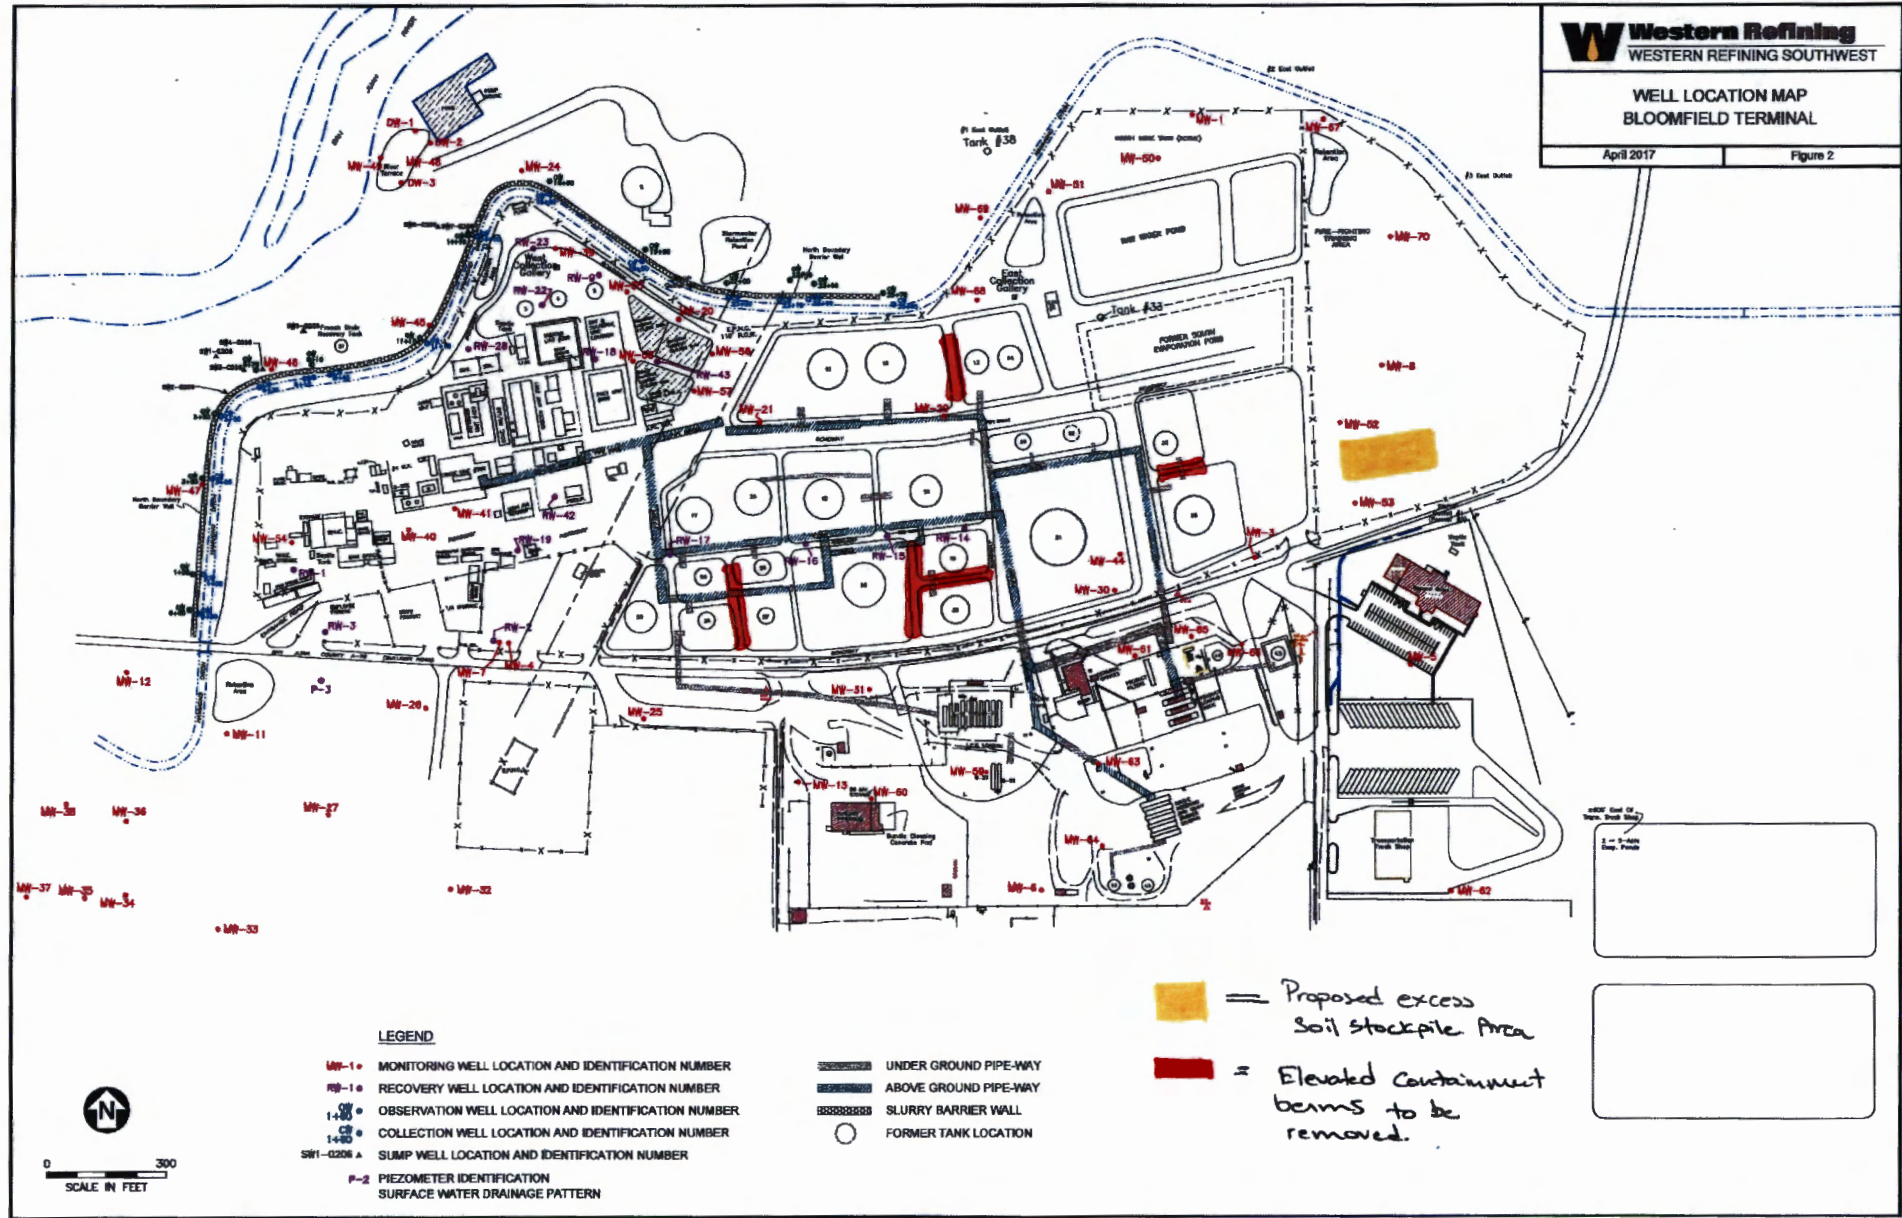

Kelly R. Robinson | Environmental Supervisor– Terminalling, Transportation and Storage
