Wayne,

This is the schedule for sampling and the parameters I believe we agreed upon during our phone conversation last week:

Bill Kingsley of Precision Engineering will be at Ciniza the week of 12/4/00 to do the drilling.

We will sample and analyze the temporary landfarm, 3 feet below the treatment zone of the landfarm, and the lagoon sludge for 8260, 8270, total RCRA metals (8), DRO, GRO, and ORO.

In addition, the sample from 3 feet below the landfarm treatment zone will be analyzed for General Chemistry parameters.

Let me know if this matches your recollection.

THX,
Dorinda
