Cheryl

When you go out to sample the BW wells in February, Gallup must also sample monitoring wells MW-1,2,4 & 5 (Sonsela) and SMW-4(Chinle) again (this is for the post-closure monitoring). The laboratory results for this second sampling event must be submitted to NMED within ten business days of receipt of the laboratory results.

I have not received the laboratory results from the July 2009 sampling event for MW-1,2,4 & 5 (Sonsela) and SMW-4(Chinle). Gallup must submit the groundwater analytical results for these wells and the soil analytical results from the locations at the LTU at one time. This submittal must also include a figure that shows the LTU sample locations. The laboratory results and figure must be submitted to NMED on or before March 15, 2010.

Let me know if you have any questions.

Thanks  
Hope

Hope, I have already done the water sampling for MW-1,2,4 & 5 (Sonsela) and SMW-4(Chinle) during our annual sampling event in July 2009. Do you want me to re-sample these wells again during the soil sampling event scheduled for next week? Raj should have forwarded the lab analysis for these wells. Thanks, cj
