Describe Cause of Problem and Remedial Action Taken.\*

The Oily Water (Wastewater) in the Railroad Rack Sump was being transferred to T-28 through a diversion line via T-105 Sewer Cup. The diversion line should have been lined up to T-35 and not T-28. T-105 Sewer Cup at T-105 overflowed onto the ground at the area previously known as the Old API (SWMU # 14). SWMU #14 (Old API Pit) was approved by the Agency for removal and the concrete was removed in 2012, leaving only a depression which contained the oily water mixture. All liquids were contained within the SWMU #14 area. Western began cleanup operations immediately on 1/15/2013 @ 1345 hrs. Western removed liquids via an onsite vacuum truck.

Describe Area Affected and Cleanup Action Taken.\*

Sewer Cup at T-105 overflowed onto the ground at the area previously known as the Old API (SWMU # 14). SWMU #14 was removed in 2012 leaving only a depression which contained the oily water mixture. Western began cleanup operations on 1/15/2013 @ 1345 hrs. Western removed liquids via an onsite vacuum truck. The vacuum truck removed an estimated ~ 69 1/2 bbls (2925 gal) from the area.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
