Subject: Western Gallup - Aeration Basin

Katie,
After our meeting yesterday, I believe that rather than offer Western an option between going through corrective action or closure, the only thing we can offer them is to do closure of the Aeration Basin. Please see the attached letter, this was an issue that came up prior to our meeting on Wednesday and we were in the process of drafting the letter to send to Western regarding the reasons why the unit is a hazardous waste management unit based on its history of use. We can of course hold this until after our meeting next week but it provides significant evidence of discharges through time of hazardous waste, both characteristic and listed.

Let me know if you would like to discuss further.

Thanks, John
