RE: HYDROCARBON SEEP INTERIM MEASURES 2018 1st QUARTER STATUS REPORT
WESTERN REFINING SOUTHWEST INC, GALLUP REFINERY
EPA ID# NMD000333211
HWB-WRG-15-006

Dear Mr. Keiling:

The attached first quarter report was prepared pursuant to Comment 22 in your letter dated April 26, 2016 on the Interim Measures Report Hydrocarbon Seep Area. Comment 22 requests a quarterly status report.

If you have any questions regarding the information being provided, please do not hesitate to contact Jessica O'Brien at (505) 722-0287.

Certification

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision according to a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Sincerely,

Daniel J. Statile
Vice President Refining
Western Refining Southwest, Inc. – Gallup Refinery

**QUARTERLY STATUS REPORT
HYDROCARBON SEEP INTERIM MEASURES
WESTERN REFINING SOUTHWEST, INC – GALLUP REFINERY
First Quarter 2018**

Activities conducted during first quarter 2018

- Source Control – Western continued to remove separate-phase hydrocarbon (SPH) and groundwater from the standpipe sumps (S1 - S6). Approximately 153 gallons of SPH and 92,847 gallons of groundwater were recovered during the first quarter, which represents a significant reduction in SPH from 659 gallons recovered during the last quarter (4th Qtr 2017). The percent of SPH recovered of the total volume was approximately 0.16%, which is significantly less than the previous quarter of 0.6%. Recovery also continued from the retention ditch, which was previously excavated north of the standpipes (S1-S6). Approximately 32,180 gallons of groundwater/hydrocarbon mixture were recovered during the first quarter. That represents a reduction from the previous quarter at 38,400 gallons. An estimated volume of 208 gallons of SPH was recovered from the retention ditch in comparison to 1,145 gallons in the fourth quarter. A summary table of the volumes is attached.

The reduction in the volumes of SPH recovered in the first quarter of 2018 as compared to the fourth quarter of 2017 is not attributed to any changes in the methods used to estimate the recovery volumes. It appears that the recovery volumes have returned to similar volumes observed from May 2017 through July 2017. There is no clear evidence to relate the possibly temporary increase to the March 2017 Sour Naphtha release, which occurred to the southeast, but that is the only known release in the area around the same time.

- Camera Surveys – Western is evaluating the reliance upon dye tracer tests instead of more camera surveys, as earlier camera surveys were not as useful tracer tests in locating leaks from subsurface pipelines.
- Dye Tracer Tests – Western previously conducted dye tracer tests at several locations near the Truck Loading Rack. The earlier test methods and results were reviewed to determine if it is possible to refine the earlier tests by locating additional points where a tracer may be introduced to the wastewater pipelines/sump. As the sumps are located beneath the truck loading rack that is constantly in service, any additional testing in this immediate area will require extensive internal coordination. New dye tracer tests were conducted related to an assessment of the sanitary lagoon that is located west of the hydrocarbon seep area and this information will be presented under separate cover, as it was not focused on the hydrocarbon seeps.

Activities planned for second quarter 2018

- Source Control – Western will continue current recovery operations at the standpipe sumps and the retention ditch using a vacuum truck to pump SPH and groundwater from each of the sumps and the downstream retention ditch.
