October 2012

SANDIA NATIONAL LABORATORIES, NEW MEXICO

ENVIRONMENTAL RESTORATION OPERATIONS

U.S. DEPARTMENT OF ENERGY:
CONTRACTOR:
PROJECT MANAGER:

SANDIA SITE OFFICE
SANDIA CORPORATION
John Cochran

NUMBER OF POTENTIAL RELEASE SITES SUBJECT TO THIS PERMIT: 36

SUSPECT WASTE: Radionuclides, metals, organic compounds, and explosives

REPORTING PERIOD: April 2012 – June 2012

OVERVIEW

This Sandia National Laboratories, New Mexico Environmental Restoration Operations (ER) Consolidated Quarterly Report (ER Quarterly Report) addresses all quarterly reporting requirements pertaining to the Hazardous and Solid Waste Amendments (HSWA) Module of the Resource Conservation and Recovery Act Permit, the Compliance Order on Consent, and the Chemical Waste Landfill Post-Closure Care Permit. The 36 sites in the Corrective Action Complete regulatory process are listed in Table I-1. The 36 sites consist of 27 Solid Waste Management Units and 9 Areas of Concern (AOCs), including 8 Drain and Septic System sites and the Tijeras Arroyo Groundwater AOC. The Burn Site Groundwater and Technical Area V Groundwater AOCs are not included on the current HSWA Permit but have been added as AOCs to the revised HSWA Permit that is pending approval by the New Mexico Environment Department at this time. This ER Quarterly Report presents activities and data in sections as follows:

- SECTION I: Environmental Restoration Operations Consolidated Quarterly Report, April – June 2012
- SECTION II: Perchlorate Screening Quarterly Groundwater Monitoring Report, April – June 2012
- SECTION III: Solid Waste Management Units 149 and 154 Quarterly Groundwater Monitoring Report, April – June 2012
- SECTION IV: Solid Waste Management Units 8/58 and 68 Quarterly Groundwater Monitoring Report, April – June 2012

ABBREVIATIONS AND ACRONYMS

| | |
|----------|---|
| µg/L | microgram(s) per liter |

SECTION I

ENVIRONMENTAL RESTORATION OPERATIONS CONSOLIDATED

QUARTERLY REPORT, APRIL – JUNE 2012

1.0 Introduction

This Environmental Restoration Operations (ER) Consolidated Quarterly Report (ER Quarterly Report) provides the status of ongoing corrective actions being implemented by Sandia National Laboratories, New Mexico (SNL/NM) ER for the April, May, and June 2012 quarterly reporting period. The following sections outline the status of regulatory closure activities for the Mixed Waste Landfill (MWL), project management and site closure, site-wide hydrogeologic characterization, and ER/Long-Term Stewardship (LTS) activities.

2.0 Environmental Restoration Operations Work Completed

2.1 Mixed Waste Landfill

A draft plan was completed in June 2012 for reclamation of the MWL Borrow Pit in Technical Area (TA) III (Figure I-1). It defines the scope of work required to adequately stabilize the site and close the National Pollution Discharge Elimination System (NPDES) Construction Permit. The NPDES Permit was established through a Storm Water Pollution Prevention Plan submitted to the U.S. Environmental Protection Agency (EPA) in 2006 as part of the MWL evapotranspirative cover (ET Cover) project. Once the plan is finalized, the stabilization work will be contracted and performed just prior to the 2013 monsoon season (July 2013).

Groundwater monitoring activities for the MWL are discussed in Section I.2.3.4 of this ER Quarterly Report.

Figure I-1
View to the North of MWL Borrow Pit,
June 2012

2.1.1 **MWL Evapotranspirative Cover Supplemental Watering Activities**

Three supplemental watering events were performed for the MWL ET Cover this reporting period during the month of June. For each watering event, approximately 56,000 gallons of water was applied over a 3-day period to stimulate a ½-inch rainfall event. Water was applied during the morning hours to minimize evaporation.

A comprehensive summary report of all supplemental watering performed prior to 2012 is provided in the revised MWL Long-Term Monitoring and Maintenance Plan (LTMMMP) (SNL/NM March 2012a).

2.1.2 **MWL Evapotranspirative Cover Maintenance Activities**

Cover maintenance activities performed during this reporting period at the MWL included the application of pre-emergent and post-emergent herbicides on small (less than 200-square-foot) test plots at the south end of the ET Cover. The testing was informally approved by the New Mexico Environment Department (NMED) on March 29, 2012, to determine the effectiveness of common herbicides in controlling Russian thistle and other common invasive annual weed species. The pre-emergent and post-emergent herbicides were applied on April 13 and June 4, 2012.

A comprehensive summary report of all cover maintenance activities performed prior to 2012 is presented in the revised MWL LTMMMP (SNL/NM March 2012a).

2.2 **Project Management and Site Closure**

ER sites currently undergoing regulatory closure activities are addressed in this section. The two permit modification requests in process with the NMED at this time are summarized in Sections I.2.2.1 and I.2.2.2. In April 2010, the U.S. Department of Energy (DOE) and Sandia Corporation (Sandia), hereafter referred to as DOE/Sandia, received formal written communication from the NMED regarding its decisions on these sites (NMED April 2010). The decisions, presented in the NMED letter dated April 8, 2010, are summarized in Section I.2.2.3.

2.2.1 **Permit Modification Request Submitted in March 2006**

This report contains 36 potential release sites that require corrective action under the Permit and Compliance Order on Consent (Table I-1); of these 36 sites, 26 sites were submitted to the NMED for the final determination of Corrective Action Complete (CAC) in March 2006 (Wagner March 2006). The sites included 19 Solid Waste Management Units (SWMUs)

and 7 Areas of Concern (AOCs). The NMED issued the “Notice of Public Comment Period and Intent to Approve a Class 3 Permit Modification of the Resource Conservation and Recovery Act (RCRA) Permit for Sandia National Laboratories” for these 26 sites in December 2007 (NMED December 2007). The NMED public review and comment period ended in February 2008. The following SWMUs and AOCs were included in this permit modification request:

- SWMUs 4, 5, 46, 49, 52, 68, 91, 101, 116, 138, 140, 147, 149, 150, 154, 161, 196, 233, and 234
- AOCs 1090, 1094, 1095, 1114, 1115, 1116, and 1117

2.2.2 **Permit Modification Request Submitted in January 2008**

Five sites were submitted for the final regulatory determination of CAC in a permit modification request submitted in January 2008 (Wagner January 2008). This permit modification included all remaining SNL/NM ER sites with the exception of three active sites (SWMUs 83, 84, and 240), the MWL (SWMU 76), and three groundwater investigation sites (TA-V, Burn Site Groundwater [BSG], and Tijeras Arroyo Groundwater [TAG]). The four SWMUs and one AOC included in the January 2008 permit modification request are:

- SWMUs 8, 28-2, 58, and 105
- AOC 1101

2.2.3 **Status of Permit Modification Requests Submitted in March 2006 and January 2008**

In April 2010, DOE/Sandia received a letter from the NMED entitled, “Class 3 Permit Modification Requests for Granting Corrective Action Complete Status for 26 SWMUs/AOCs (Request of March 1, 2006) and 5 Other SWMUs/AOCs (Request of January 7, 2008), Sandia National Laboratories, EPA ID #NM5890110518, HWB-SNL-06-007 and HWB-SNL-08-001” (NMED April 2010). This letter included four main sections as follows: (1) “SWMUs Requiring Additional Corrective Action,” (2) “SWMUs/AOCs to be Subject to Groundwater Monitoring Controls,” (3) “SWMUs/AOCs to be Restricted to Industrial Land Use,” and (4) “SWMUs/AOCs that do not Require Corrective Action. The NMED requirements stated in this letter are summarized as follows:

- The section titled, “SWMUs Requiring Additional Corrective Action,” specifies additional characterization requirements for SWMU 68 (Old Burn Site), SWMU 149 (Building 9930 Septic System), SWMU 154 (Building 9960 Septic System and Seepage Pits), and SWMUs 8/58 (Open Dump [Coyote Canyon Blast Area]/Coyote Canyon Blast Area). Activities associated with these requirements are summarized in Section I.2.3 of this ER Quarterly Report. Analytical results for groundwater sampling at these SWMUs are presented in Sections III and IV of this ER Quarterly Report.

- The section titled, “SWMUs/AOCs to be Subject to Groundwater Monitoring Controls,” specifies that annual groundwater monitoring is to be conducted at SWMUs 49 and 116. Groundwater monitoring results are summarized in Sections I.2.3.8 and I.2.3.9, respectively, of this ER Quarterly Report.

- The section titled, “SWMUs/AOCs to be Restricted to Industrial Land Use,” indicates that the NMED intends to restrict the future land use of the following SWMUs/AOCs to industrial:
 1. SWMU 4 – Liquid Waste Disposal System Surface Impoundments
 2. SWMU 46 – Old Acid Waste Line Outfall
 3. SWMU 91 – Lead Firing Site
 4. SWMU 196 – Building 6597 Cistern (TA-V)
 5. SWMU 234 – Storm Drain System Outfall
 6. AOC 1090 – Building 6721 Septic System (TA-III)

- The section titled, “SWMUs/AOCs that do not Require Corrective Action,” includes the following 25 SWMUs/AOCs:
 1. SWMU 4 – Liquid Waste Disposal System Surface Impoundments
 2. SWMU 5 – Liquid Waste Disposal System Drainfield
 3. SWMU 28-2 – Mine Shaft
 4. SWMU 46 – Old Acid Waste Line Outfall
 5. SWMU 49 – Building 9820 Drains (Lurance Canyon)
 6. SWMU 91 – Lead Firing Site
 7. SWMU 101 – Building 9926/9926A Septic System and Seepage Pit (Coyote Test Field [CTF])
 8. SWMU 105 – Mercury Spill (Building 6536)
 9. SWMU 116 – Building 9990 Septic System (CTF)
 10. SWMU 138 – Building 6630 Septic Systems (TA-III)
 11. SWMU 140 – Building 9965 Septic System and Drywell (Thunder Range)
 12. SWMU 147 – Building 9925 Septic Systems (CTF)
 13. SWMU 150 – Building 9939/9939A Septic System and Drainfield (CTF)

14. SWMU 161 – Building 6636 Septic System (TA-III)
 15. SWMU 196 – Building 6597 Cistern (TA-V)
 16. SWMU 233 – Storm Drain System Outfall
 17. SWMU 234 – Storm Drain System Outfall
 18. AOC 1090 – Building 6721 Septic System (TA-III)
 19. AOC 1094 – Live Fire Range East Septic System (Lurance Canyon)
 20. AOC 1095 – Building 9938 Seepage Pit (CTF)
 21. AOC 1101 – Building 885 Septic System
 22. AOC 1114 – Building 9978 Drywell (CTF)
 23. AOC 1115 – Former Offices Septic System (Solar Tower Complex)
 24. AOC 1116 – Building 9981A Seepage Pit (Solar Tower Complex)
 25. AOC 1117 – Building 9982 Drywell (Solar Tower Complex)
- SWMU 52, The Liquid Waste Disposal System (LWDS), was addressed in the April 2010 NMED letter as a request for additional information to aid the NMED in determining the status of SWMU 52 (Brandwein December 2009a and 2009b). In December 2011, SNL/NM ER personnel provided the requested information to the NMED along with a proposal to address NMED concerns about the future use of this LWDS site (SNL/NM December 2011).

2.3 **Site-Wide Hydrogeologic Characterization**

The following sections present site-wide hydrogeologic characterization activities conducted at three groundwater investigation sites (TA-V, BSG, and TAG), the MWL, the Chemical Waste Landfill (CWL), and the seven SWMUs subject to additional corrective action and groundwater monitoring controls as discussed in Section I.2.2.3 of this ER Quarterly Report.

Analytical results for groundwater monitoring at TA-V, BSG, TAG, the MWL, the CWL, and SWMUs 68, 149, 154, 8/58, 49, and 116 will be presented in the SNL/NM Calendar Year (CY) 2012 Annual Groundwater Monitoring Report (anticipated submittal to the NMED in summer 2013).

Perchlorate analysis of groundwater samples for the BSG and SWMUs 8/58, 68, 149, and 154 is discussed in Section II of this ER Quarterly Report.

Analytical results for the CWL groundwater monitoring will be presented and discussed in the CWL Annual Post-Closure Care Report for CY 2012.

Analytical results for the April 2012 groundwater sampling of monitoring wells at SWMUs 8/58 (CCBA-MW-1 and CCBA-MW-2) and SWMU 68 (OBS-MW-1, OBS-MW-2, and OBS-MW-3) are presented in Section IV of this ER Quarterly Report.

Analytical results for the June 2012 groundwater sampling of monitoring wells at SWMU 149 (CTF-MW-3) and SWMU 154 (CTF-MW-2) are presented in Section III of this ER Quarterly Report.

2.3.1 **Technical Area V Groundwater**

Groundwater sampling at TA-V was conducted in May and June 2012.

2.3.2 **Burn Site Groundwater**

The groundwater monitoring well installation report for the BSG groundwater monitoring wells CYN-MW9, CYN-MW10, CYN-MW11, and CYN-MW12 and collection of subsurface soil samples at Boreholes BSG-BH001 through BSG-BH010 (SNL/NM January 2012) was approved by the NMED in June 2012 (NMED June 2012).

The Monitoring Well Plug and Abandonment Plan and Well Construction Plan for the BSG groundwater monitoring wells 12AUP01, CYN-MW1D, CYN-MW2S, and CYN-MW13 (SNL/NM February 2012) was approved by the NMED in April 2012 (NMED April 2012a).

Groundwater sampling for the BSG investigation was conducted in April 2012.

2.3.3 **Tijeras Arroyo Groundwater**

Groundwater sampling for the TAG investigation was conducted in June 2012.

2.3.4 **Mixed Waste Landfill Groundwater**

No MWL groundwater monitoring activities were performed during this reporting period.

2.3.5 **Chemical Waste Landfill Groundwater**

No CWL groundwater monitoring activities were performed during this reporting period.

2.3.6 **SWMUs 8/58 Groundwater**

Groundwater sampling for SWMUs 8/58 was conducted in April 2012.

The groundwater monitoring well installation report for the SWMUs 8/58 groundwater monitoring wells CCBA-MW1 and CCBA-MW2 (SNL/NM November 2011) was approved by the NMED in April 2012 (NMED April 2012b).

2.3.7 **SWMU 68 Groundwater**

Groundwater sampling for SWMU 68 was conducted in April 2012.

The groundwater monitoring well installation report for the SWMU 68 groundwater monitoring wells OBS-MW1, OBS-MW2, and OBS-MW3 (SNL/NM November 2011) was approved by the NMED in April 2012 (NMED April 2012b).

2.3.8 **SWMU 49 Groundwater**

No SWMU 49 groundwater monitoring activities were performed during this reporting period.

2.3.9 **SWMU 116 Groundwater**

No SWMU 116 groundwater monitoring activities were performed during this reporting period.

2.3.10 **SWMU 149 Groundwater**

Groundwater sampling for SWMU 149 was conducted in June 2012.

2.3.11 **SWMU 154 Groundwater**

Groundwater sampling for SWMU 154 was conducted in June 2012.

2.4 **Environmental Restoration Operations Documents Submitted to the NMED Pending Regulatory Review and Approval**

This section lists the ER documents that have been submitted to the NMED and are, as of this reporting period, still pending review and approval:

- The TA-V Groundwater Corrective Measures Evaluation (CME) Work Plan, submitted to the NMED on May 11, 2004 (SNL/NM April 2004).
- The BSG Interim Measures Work Plan, submitted to the NMED on May 26, 2005 (SNL/NM May 2005).
- The CME Report for the TAG Investigation, submitted to the NMED on September 1, 2005 (SNL/NM August 2005).
- The BSG Current Conceptual Model of Groundwater Flow and Contaminant Transport, submitted to the NMED on April 9, 2008 (SNL/NM March 2008).
- The TA-V Geophysical Logs and Slug Test Results Report, submitted to the NMED on November 24, 2010 (SNL/NM November 2010).
- Summary Report for TA-V Groundwater and Soil-Vapor Monitoring Well Installation submitted to the NMED on June 30, 2011 (SNL/NM June 2011).
- MWL Groundwater Monitoring Report for CY 2010 submitted to the NMED on September 30, 2011 (SNL/NM September 2011).
- MWL LTMMP submitted to the NMED on March 26, 2012 (SNL/NM March 2012a).

3.0 **Long-Term Stewardship Work Completed**

3.1 **Chemical Waste Landfill**

The CWL Post-Closure Care Permit (PCCP) (NMED October 2009) became effective on June 2, 2011, when the NMED approved the CWL Final RCRA Closure Report (Kieling June 2011), transitioning the CWL from SNL/NM ER to LTS. A summary of post-closure care activities at the CWL for this reporting period is provided in this ER Quarterly Report. More detailed documentation of ongoing activities under the PCCP will be reported in the CWL Annual Post-Closure Care Report (due to the NMED in March 2013).

- Quarterly inspection of the CWL ET Cover surface, storm-water diversion structures, and security fence was performed in June 2012. A request was submitted to SNL/NM Facilities to clear a storm water drainage channel of debris (primarily accumulated weeds) that was blocking greater than 1/3 of the drainage channel. This repair work will

be completed during the next reporting period. No other maintenance or repairs were required.

- A meeting was held at the NMED District 1 Office in Albuquerque on June 27, 2012, to discuss CWL Permit issues. Discussion topics included updating the NMED website version of the CWL Permit to reflect the February 2012 permit modification request approval (Kieling February 2012), correcting the February 2012 NMED approval replacement attachment, and addressing DOE/Sandia plans for another minor permit modification request to be submitted in 2012. Follow-up discussion of these topics is planned for the next reporting period.
- The final semiannual groundwater monitoring event will be performed in July 2012. All wells were inspected and no maintenance or repairs were required.
- No cover maintenance was performed on the CWL ET Cover during this reporting period.

3.2 **Corrective Action Management Unit**

Corrective Action Management Unit (CAMU) post-closure care operations consist of vadose zone monitoring, leachate removal, and post-closure inspections, as required in the PCCP. Activities for this reporting period (April through June 2012) include the following:

- Quarterly monitoring of the Vadose Zone Monitoring System was conducted in June 2012. The results will be presented in the 2012 CAMU Vadose Zone Monitoring System Annual Monitoring Results Report (anticipated submittal to the NMED in September 2012).
- Composite leachate sampling for waste characterization was conducted on May 22, 2012.
- Weekly pumping of leachate from the leachate collection and removal system was performed. Waste management associated with the leachate collection and removal system during this reporting period is outlined in Section I.3.2.1.
- Weekly inspections of the RCRA less-than-90-day accumulation area were conducted.
- Quarterly inspection of the site was performed on June 21 and June 28, 2012, which included the containment cell cover, storm-water diversion structures, security fences,

gates, signs, and benchmarks. Any findings not already dealt with will be addressed during the next reporting period. The inspection findings are as follows:

- Six four-wing saltbush plants were identified growing on the containment cell vegetative cover. Because these plants can develop extensive root systems that could damage the high-density polyethylene fabric that is part of the cover system, they were removed when they were identified. Figure I-2 presents a photograph of the native grasses and gravel mulch surface of the CAMU vegetative cover.

**Figure I-2
Corrective Action Management
Unit Vegetative Cover**

- Signs on the north and south gate were noted as fading and need to be replaced.
- A warning sign on the fence north of monitoring location CSS-1 needs to be repaired.
- A bush at the westernmost benchmark needs to be trimmed so the benchmark is visible from the road.
- Windblown plywood debris inside the north gate needs to be removed.

3.2.1 CAMU Waste Management Activities

Waste management data for the CAMU are reported in this section for the reporting period of April through June 2012. Solid waste (i.e., personal protective equipment, paper wipes, and plastic drum pump) generated during this reporting period does not exceed 10 pounds.

- Leachate waste stored on site as of April 1, 2012:
 - 17 gallons
- Leachate waste generated on site during the reporting period:
 - 96 gallons

- Leachate waste removed from the site by Hazardous Waste Handling Facility personnel on May 31, 2012:
 - 76 gallons
- Leachate waste remaining on site at the end of this reporting period:
 - 37 gallons

3.2.2 CAMU Regulatory Activities

No regulatory activities occurred during this quarter.

3.3 Long-Term Stewardship Documents Submitted to the NMED Pending Regulatory Review and Approval

- One LTS document that has been submitted to the NMED is, as of this reporting period, still pending review and approval. The “Chemical Waste Landfill Annual Post-Closure Care Report – Calendar Year 2011” was submitted to the NMED on March 26, 2012 (SNL/NM March 2012b).

SECTION II

PERCHLORATE SCREENING QUARTERLY GROUNDWATER MONITORING REPORT, APRIL – JUNE 2012

1.0 Introduction

Section IV.B of the Compliance Order on Consent (the Order), between the New Mexico Environment Department (NMED), the U.S. Department of Energy (DOE), and Sandia Corporation (Sandia), hereafter referred to as DOE/Sandia, for Sandia National Laboratories, New Mexico (SNL/NM), effective on April 29, 2004, stipulates that a select group of groundwater monitoring wells at SNL/NM be sampled for perchlorate (NMED April 2004). This section of the Environmental Restoration Operations (ER) Consolidated Quarterly Report (ER Quarterly Report) summarizes the perchlorate screening groundwater monitoring completed during the Second Quarter of Calendar Year (CY) 2012 (April, May, and June) in response to the requirements of the Order. The outline of this report is based on the required elements of a “Periodic Monitoring Report” described in Section X.D. of the Order (NMED April 2004).

In November 2005, DOE/Sandia submitted a letter report on the status of perchlorate screening in groundwater at SNL/NM monitoring wells (SNL/NM November 2005). The purpose of the letter report was to summarize previous correspondence and sampling results and to outline proposed future work to comply with NMED requirements for perchlorate screening of groundwater. As specified in the letter report, quarterly reports will be submitted for wells active in the perchlorate-screening monitoring well network.

Based on the NMED response (NMED January 2006), DOE/Sandia will submit each quarterly report within 90 days following the quarter that the data represent. In November 2008, DOE/Sandia received approval from the NMED to proceed to semiannual reporting (NMED November 2008); however, upon further consideration, the NMED once more required quarterly reporting (NMED April 2009). This did not alter the previously negotiated frequency for monitoring well CYN-MW6, an existing Burn Site Groundwater (BSG) study area monitoring well that has been under the sampling and reporting requirements of the Order since the well was installed, which remains at a semiannual frequency for sampling and reporting. In September 2011, DOE/Sandia requested an extension of the submittal dates by one month for ER Quarterly Reports (SNL/NM September 2011). The request was approved by the NMED (September 2011), which allows DOE/Sandia to submit perchlorate quarterly reports within 120 days following the quarter that the data represent.

This report is the twenty-sixth to be submitted since the November 2005 letter report; the previous reports were submitted for Fourth Quarter of CY 2005 through the First Quarter of CY 2012 (SNL/NM February 2006, June 2006, September 2006, December 2006, March 2007, June 2007, September 2007, December 2007, March 2008, June 2008, September 2008, December 2008, June 2009, September 2009, December 2009, March 2010, June 2010a, September 2010a, December 2010, March 2011, June 2011, October 2011, January 2012a, April 2012, and July 2012).

Groundwater at BSG monitoring well CYN-MW6 has been sampled 19 times; Coyote Test Field (CTF) wells CTF-MW2 and CTF-MW3 have been sampled six times; Solid Waste Management Units (SWMUs) 8/58 wells CCBA-MW1 and CCBA-MW2 have been sampled three times; and SWMU 68 wells OBS-MW1, OBS-MW2, and OBS-MW3 have been sampled three times. (The Order requires that new wells be sampled for perchlorate for a minimum of four quarters [NMED April 2004]). Reporting will continue as long as groundwater monitoring wells remain active in the perchlorate-screening monitoring well network unless otherwise negotiated with the NMED.

2.0 **Scope of Activities**

This report provides perchlorate screening groundwater monitoring analytical results for the Second Quarter of CY 2012 (April, May, and June) for the wells currently active in the perchlorate-screening program as shown on Figure II-1 and listed in Table II-1. In accordance with the requirements of Table XI-1 of the Order, a well with four consecutive quarters of nondetects (NDs) for perchlorate at the screening level/method detection limit (MDL) of 4 micrograms per liter ($\mu\text{g/L}$) is removed from the requirement of continued monitoring for perchlorate.

Data for numerous wells identified in the Order have satisfied this requirement; therefore, these wells have been removed from the perchlorate-screening program. The perchlorate results for these wells have been provided in previous reports and are not discussed in this current report. Wells discussed in previous perchlorate-screening reports include the following: CYN-MW1D, CYN-MW5 (recently reinstated, discussed in Section II.3.0), CYN-MW7, CYN-MW8, CYN-MW9, CYN-MW10, CYN-MW11, CYN-MW12, LWDS-MW1, MRN-2, MRN-3D, MWL-BW1, MWL-BW2, MWL-MW1, MWL-MW7, MWL-MW8, MWL-MW9, NwTA3-MW2, SwTA3-MW4, TA1-W-03, TA1-W-06, TA1-W-08, TA2-W-01, TA2-W-27, TAV-MW11, TAV-MW12, TAV-MW13, and TAV-MW14.

SNL/NM personnel performed groundwater sampling for perchlorate at eight wells on the dates listed in Table II-1. Several of the wells were installed after the Order was finalized and were therefore required to be sampled for perchlorate as “new” wells; the other wells were sampled to meet other regulatory requirements (discussed in Section II.3.0). Groundwater sampling activities were conducted in accordance with procedures outlined in the following investigation-specific sampling and analysis plans (SAPs) entitled:

- “SWMUs 8/58 Groundwater Monitoring, Mini-SAP for Third Quarter, Fiscal Year 2012” (SNL/NM March 2012a).
- “SWMU 68 Groundwater Monitoring, Mini-SAP for Third Quarter, Fiscal Year 2012” (SNL/NM March 2012b).
- “Burn Site Groundwater Monitoring, Mini-SAP for Third Quarter, Fiscal Year 2012” (SNL/NM March 2012c).
- “SWMU 149 Groundwater Monitoring, Mini-SAP for Third Quarter, Fiscal Year 2012” (SNL/NM May 2012a).
- “SWMU 154 Groundwater Monitoring, Mini-SAP for Third Quarter, Fiscal Year 2012” (SNL/NM May 2012b).

As described in the Mini-SAPs, groundwater sampling was performed in accordance with current SNL/NM Environmental Management, Long-Term Stewardship Project Field Operating Procedures (FOPs). A portable Bennett™ groundwater sampling system was used to collect the groundwater samples. The sampling pump and tubing bundle were decontaminated prior to insertion into monitoring wells in accordance with procedures described in FOP 05-03, “Groundwater Monitoring Equipment Decontamination” (SNL/NM January 2012b). With the exception on CYN-MW6, each well was purged a minimum of one saturated screen volume before sampling in accordance with FOP 05-01, “Groundwater Monitoring Well Sampling and Field Analytical Measurements” (SNL/NM January 2012c). Well CYN-MW6 is a low-yield monitoring well and was purged dry and allowed to recover before sampling to ensure a representative groundwater sample.

Field water-quality measurements for turbidity, pH, temperature, specific conductance (SC), oxidation-reduction potential (ORP), and dissolved oxygen (DO) were obtained from the well prior to collecting groundwater samples. Groundwater temperature, SC, ORP, DO, and pH were measured with a YSI™ Model 6920 water quality meter. Turbidity was measured with a HACH™ Model 2100Q turbidity meter. Purging continued until four stable

measurements for turbidity, pH, temperature, and SC were obtained. Groundwater stability is considered acceptable when the following parameters are achieved:

- Turbidity measurements are less than 5 nephelometric turbidity units (NTU) or within 10% for turbidity values greater than 5 NTU.
- pH is within 0.1 units
- Temperature is within 1.0 degree Celsius
- SC is within 5%.

Field Measurement Logs documenting details of well purging and water quality measurements have been submitted to the SNL/NM Records Center.

The groundwater samples were submitted to GEL Laboratories LLC (GEL) for chemical analysis of perchlorate using U.S. Environmental Protection Agency Method 314.0 (EPA November 1999). The sample identification, Analysis Request/Chain-of-Custody form number, and the associated groundwater investigation are provided in Table II-2. The analytical report from GEL, including certificates of analyses (COA) (Appendix A), analytical methods, MDLs, practical quantitation limits, dates of analyses, and results of quality control (QC) analyses, and the data validation findings (Appendix B), have been submitted to the SNL/NM Records Center.

3.0 **Regulatory Criteria**

For a given monitoring well, four consecutive ND results using the screening level/MDL of 4 µg/L are considered by the NMED as evidence of the absence of perchlorate, such that additional monitoring for perchlorate in that well is not required. If perchlorate is detected using the screening level/MDL of 4 µg/L in a specific well, then monitoring will continue at that well at a frequency negotiated with the NMED. The Order (NMED April 2004) also requires that for detections equal to or greater than 4 µg/L, DOE/Sandia will evaluate the nature and extent of perchlorate contamination, based on a screening level/MDL of 4 µg/L, and incorporate the results of this evaluation into a Corrective Measures Evaluation (CME). Section VII.C of the Order clarifies that the CME process will be initiated where there is a documented release to the environment and where corrective measures are necessary to protect human health and the environment.

In March 2007, DOE/Sandia received a letter of approval from the NMED, which stated the requirement that DOE/Sandia “determine the nature and extent of the contamination and complete a CME for the perchlorate-impacted groundwater in the vicinity of CYN-MW6” (NMED March 2007). As this was based solely on the four quarters of monitoring results, DOE/Sandia submitted a letter to the NMED in April 2007 (SNL/NM April 2007), which recommended further characterization through continued quarterly monitoring of CYN-MW6 for four additional quarters, ending in December 2007, to ensure appropriate characterization of this well. In January 2008, DOE/Sandia requested a meeting with the NMED to discuss the need for continued monitoring or additional characterization work and, potentially, a CME.

In preparation for discussing the perchlorate-impacted groundwater in the vicinity of CYN-MW6 and to show that the requirement “to determine the nature and extent of contamination” (NMED March 2007) has been met, DOE/Sandia provided supporting information to the NMED (SNL/NM March 2008). Perchlorate in surface soil has been characterized at SWMUs in the study area (SNL/NM June 2006 and March 2008). Based on these data, DOE/Sandia consider that the nature and extent of perchlorate in groundwater at the Burn Site has been sufficiently characterized. Since 2004, groundwater samples from four other monitoring wells in the vicinity of the Burn Site have been analyzed for perchlorate, including CYN-MW1D, CYN-MW5, CYN-MW7, and CYN-MW8. All these wells were sampled for four quarters and all results were ND for perchlorate (SNL/NM March 2008).

In accordance with the requirements of Section VI.K.1.b of the Order (NMED April 2004), a human health risk assessment has been performed to evaluate the potential for adverse health effects from the concentrations of perchlorate detected in CYN-MW6 groundwater samples. The maximum perchlorate concentration to date of 8.93 $\mu\text{g/L}$ was used in the risk assessment. The calculated hazard quotient (HQ) of 0.35 is less than the NMED target level of a hazard index (the sum of all HQs) of 1.0 (NMED June 2006, SNL/NM March 2008).

Because perchlorate concentrations in samples from monitoring well CYN-MW6 have exceeded the screening level, DOE/Sandia initiated a negotiation process with the NMED (SNL/NM March 2007) to determine the frequency of continued monitoring. In November 2008, DOE/Sandia received approval from the NMED to proceed with semiannual monitoring of perchlorate in CYN-MW6 and proceed with semiannual reporting of all perchlorate results (NMED November 2008). Upon further consideration, the NMED once more required that DOE/Sandia resume quarterly reporting of perchlorate results with the exception of CYN-MW6 (NMED April 2009).

In April 2009, DOE/Sandia received a letter from the NMED requiring DOE/Sandia to characterize the nature and extent of the perchlorate contamination in soil and groundwater in the BSG study area (NMED April 2009). A characterization work plan was prepared and submitted to the NMED (SNL/NM November 2009), approved by the NMED (February 2010), and implemented in July 2010. In the April 2009 letter, the NMED had also requested that DOE/Sandia monitor perchlorate concentrations for a minimum of four quarters at several Tijeras Arroyo Groundwater and Technical Area V monitoring wells (NMED April 2009); all these wells have been sampled for four consecutive monitoring events with no perchlorate detections and have since been removed from the perchlorate sampling list.

During the First Quarter of CY 2011, four monitoring wells were added to the perchlorate monitoring network based on the NMED letter of April 8, 2010, entitled, “Class 3 Permit Modification Requests for Granting Corrective Action Complete Status for 26 SWMUs/AOCs (Request of March 1, 2006) and 5 Other SWMUs/AOCs (Request of January 7, 2008), Sandia National Laboratories, EPA ID #NM5890110518 HWB-SNL-06-007 and HWB-SNL-08-001” (NMED April 2010). The NMED letter required work plans and groundwater monitoring at the following SWMUs:

- SWMU 49—Annual sampling of existing monitoring well CYN-MW5. This well was sampled four times from May 2004 through February 2005. Based on four consecutive ND results, CYN-MW5 was removed from the perchlorate monitoring network (SNL/NM November 2005).
- SWMU 116—Annual sampling of existing monitoring well CTF-MW1.
- SWMU 149—Submittal of a SAP and quarterly sampling of existing monitoring well CTF-MW3 for a minimum of eight quarters.
- SWMU 154—Submittal of a SAP and quarterly sampling of existing monitoring well CTF-MW2 for a minimum of eight quarters.

To fulfill the requirements of the April 2010 NMED letter, DOE/Sandia submitted a SAP for CTF-MW2 and CTF-MW3 (SNL/NM June 2010b) that was subsequently approved (with modifications) by the NMED (December 2010).

The NMED letter of April 8, 2010, also required work plans, installation of groundwater monitoring wells, and groundwater monitoring at the following SWMUs:

- SWMUs 8/58—Two groundwater monitoring wells must be installed (CCBA-MW1 and CCBA-MW2) and sampled quarterly for a minimum of eight quarters.
- SWMU 68—Three groundwater monitoring wells must be installed (OBS-MW1, OBS-MW2, and OBS-MW3) and sampled quarterly for a minimum of eight quarters.

To fulfill the requirements of the April 2010 NMED letter, DOE/Sandia submitted a Well Installation Plan/SAP for CCBA-MW1, CCBA-MW2, OBS-MW1, OBS-MW2, and OBS-MW3 (SNL/NM September 2010b) that was subsequently approved (with modification) by the NMED (January 2011).

4.0 **Monitoring Results**

Table II-3 summarizes current and historical perchlorate results for wells currently in the perchlorate-screening monitoring network. The analytical laboratory COA for the Second Quarter of CY 2012 perchlorate data is provided in Appendix A. Consistent with historical analytical results, no perchlorate was detected above the screening level in any samples collected from CCBA-MW1, CCBA-MW2, CTF-MW2, CTF-MW3, OBS-MW1, OBS-MW2, or OBS-MW3. Also consistent with historical analytical results, perchlorate was detected above the screening level in the sample from CYN-MW6.

As shown in Table II-3, the April 2012 perchlorate concentrations reported for well CYN-MW6 environmental and duplicate environmental samples are 7.31 and 7.32 $\mu\text{g/L}$, which are consistent with the average concentration detected since sampling began in March 2006 (Figure II-2). The hydrograph for well CYN-MW6 (Figure II-2) shows that the water table is rapidly declining.

Table II-4 summarizes the stabilized water-quality values measured immediately before the groundwater samples were collected. The field water quality measurements include turbidity, pH, temperature, SC, ORP, and DO.

The analytical data were reviewed and validated in accordance with Administrative Operating Procedure 00-03, "Data Validation Procedure for Chemical and Radiochemical Data," Revision 3 (SNL/NM May 2011). No problems were identified with the analytical data that resulted in qualification of the data as unusable. The data are acceptable, and reported QC measures are adequate. The data validation sample findings summary sheets for the perchlorate data are provided in Appendix B.

No variances or nonconformances in perchlorate sampling field activities or field conditions from requirements in the groundwater monitoring Mini-SAPs (SNL/NM March 2012a, March 2012b, March 2012c, May 2012a, and May 2012b) were identified during the Second Quarter of CY 2012 sampling activities.

5.0 **Summary and Conclusions**

Based on the analytical data presented in Table II-3 and in previous reports, the following statements can be made:

- No perchlorate was detected in the environmental samples from groundwater monitoring wells CCBA-MW1, CCBA-MW2, CTF-MW2, CTF-MW3, OBS-MW1, OBS-MW2, or OBS-MW3 at the screening level/MDL of 4 µg/L.
- Since June 2004 (the start of sampling as required by the Order), perchlorate was detected above the screening level/MDL (4 µg/L) in groundwater samples from only one of the wells (CYN-MW6) in the perchlorate-screening monitoring well network.
- The perchlorate concentrations for well CYN-MW6 for the Second Quarter of CY 2012 sampling event are 7.31 and 7.32 µg/L (Table II-3), which are consistent with the average concentration reported since the inception of perchlorate sampling at well CYN-MW6 in March 2006 (Figure II-2).
- A human health risk assessment was performed to evaluate the potential for adverse health effects from the concentrations of perchlorate detected in CYN-MW6 groundwater samples. The maximum concentration of perchlorate in CYN-MW6 samples to date (8.93 µg/L) was used in the assessment. The calculated HQ of 0.35 is less than the NMED target level of a hazard index (the sum of all HQs) of 1.0 (NMED June 2006 and SNL/NM March 2008).

DOE/Sandia will continue annual monitoring of perchlorate for CTF-MW1 and CYN-MW5, semiannual monitoring for CYN-MW6, and quarterly monitoring for wells CCBA-MW1, CCBA-MW2, CTF-MW2, CTF-MW3, OBS-MW1, OBS-MW2, and OBS-MW3.

Groundwater Elevations and Perchlorate Concentrations over Time in CYN-MW6

Tables

Table II-1
Current Perchlorate Screening Monitoring Well Network
Second Quarter, CY 2012
(April – June 2012)

| Well | Date Sampled | Number of Consecutive Sampling Events ^a | Remaining Number of Sampling Events ^b | Sampling Equipment |
|----------|--------------|--|--|--------------------|
| CCBA-MW1 | 23-Apr-12 | 3 | 5 | Bennett™ Pump |
| CCBA-MW2 | 24-Apr-12 | 3 | 5 | Bennett™ Pump |
| CTF-MW2 | 19-Jun-12 | 6 | 2 | Bennett™ Pump |
| CTF-MW3 | 16-Jun-12 | 6 | 2 | Bennett™ Pump |
| CYN-MW6 | 16-Apr-12 | 19 | TBD ^c | Bennett™ Pump |
| OBS-MW1 | 18-Apr-12 | 3 | 5 | Bennett™ Pump |
| OBS-MW2 | 19-Apr-12 | 3 | 5 | Bennett™ Pump |
| OBS-MW3 | 17-Apr-12 | 3 | 5 | Bennett™ Pump |

Notes

^aIncludes this sampling event.

^bPer the requirements of Table XI-1 of the Order (NMED April 2004), a well will be removed from the perchlorate-screening monitoring well network after four quarters unless perchlorate is detected above the screening level/MDL of 4 µg/L. However, the eight wells currently in the network are being sampled for a minimum of eight events based on site-specific NMED requirements (NMED April 2010).

^cTBD = To be determined. This well has been sampled for the required initial four quarters. Because perchlorate concentrations in this well have exceeded the screening level, DOE/Sandia and the NMED have agreed to further characterization requirements in the BSG study area (NMED February 2010).

µg/L = Microgram(s) per liter.

BSG = Burn Site Groundwater.

CCBA = Coyote Canyon Blast Area.

CTF = Coyote Test Field.

CY = Calendar Year.

CYN = Canyons (Burn Site).

DOE = U.S. Department of Energy.

MDL = Method detection limit.

MW = Monitoring well.

NMED = New Mexico Environment Department.

OBS = Old Burn Site.

Sandia = Sandia Corporation.

Table II-2
Sample Details for Second Quarter, CY 2012 Perchlorate Sampling

| Well | Sample Identification | AR/COC Number | Associated Groundwater Investigation |
|----------|--------------------------|---------------|--------------------------------------|
| CCBA-MW1 | 092291-020 | 614155 | SWMUs 8/58 |
| CCBA-MW2 | 092296-020 092297-020 | 614157 | |
| CTF-MW2 | 092538-020 | 614255 | SWMU 154 |
| CTF-MW3 | 092535-020 | 614254 | SWMU 149 |
| CYN-MW6 | 091990-020 091991-020 | 614071 | BSG |
| OBS-MW1 | 092022-020 092023-020 | 614081 | SWMU 68 |
| OBS-MW2 | 092025-020 | 614082 | |
| OBS-MW3 | 092018-020 | 614079 | |

Notes

AR/COC = Analysis Request/Chain of Custody.
 BSG = Burn Site Groundwater.
 CCBA = Coyote Canyon Blast Area.
 CTF = Coyote Test Field.
 CY = Calendar Year.
 CYN = Canyons (Burn Site).
 MW = Monitoring Well.
 OBS = Old Burn Site.
 SWMU = Solid Waste Management Unit.

Notes

AR/COC = Analysis Request and Chain of Custody.
 CCBA = Coyote Canyon Blast Area.
 CFR = Code of Federal Regulations.
 CTF = Coyote Test Field.
 CY = Calendar Year.
 CYN = Canyons (Burn Site).
 EPA = U.S. Environmental Protection Agency.
 ID = Identification.
 MW = Monitoring well.
 OBS = Old Burn Site.

^aResult

ND = Not detected (at MDL).
 µg/L = Micrograms per liter.

^bMDL

Method detection limit. The minimum concentration that can be measured and reported with 99% confidence that the analyte is greater than zero; analyte is matrix-specific.

^cPQL

Practical quantitation limit. The lowest concentration of analytes in a sample that can be reliably determined within specified limits of precision and accuracy by the indicated method under routine laboratory operating conditions.

^dMCL

Maximum contaminant level. Established by the U.S. Environmental Protection Agency Primary Water Regulations (40 CFR 141.11, Subpart B) and subsequent amendments or Title 20, Chapter 7, Part 1 of the New Mexico Administrative Code, incorporating 40 CFR 141.

NE = Not established.

Table II-3 (Concluded)
Summary of Perchlorate Screening Analytical Results for the
Current Monitoring-Well Network, as of Second Quarter, CY 2012

Notes (continued)

^gLaboratory Qualifier

- H = Analytical holding time was exceeded.
- h = Preparation holding time was exceeded.
- J = Estimated value, the analyte concentration fell above the effective MDL and below the effective PQL.
- U = Analyte is absent or below the method detection limit.

^fValidation Qualifier

If cell is blank, then all quality control samples meet acceptance criteria with respect to submitted samples and no qualifier was assigned.

- HT = The holding time was exceeded for the associated sample analysis.
- J = The associated value is an estimated quantity.
- J- = The associated numerical value is an estimated quantity with a suspected negative bias.
- P2 = Insufficient Quality control data to determine laboratory precision.
- X1 = General data quality is suspect.

^gAnalytical Method

- EPA 314.0: EPA, November 1999, "Perchlorate in Drinking Water Using Ion Chromatography," EPA 815/R-00-014 (EPA November 1999).
- EPA 6850M: U.S. Environmental Protection Agency, April 2005, "Perchlorate in Water, Soils, and Solids Using High Performance Liquid Chromatography/Electrospray Ionization/Mass Spectrometry (HPLC/ESI/MS)," draft, Method 6850 (EPA April 2005).

Notes

^aField measurements obtained immediately before the groundwater sample was collected.

°C = Degrees Celsius.

% Sat = Percent saturation.

µmhos/cm = Micromhos per centimeter.

CCBA = Coyote Canyon Blast Area.

CTF = Coyote Test Field.

CY = Calendar Year.

CYN = Canyons (Burn Site).

ID = Identification.

mg/L = Milligrams per liter.

mV = Millivolt(s).

MW = Monitoring well.

NTU = Nephelometric turbidity unit.

OBS = Old Burn Site.

pH = Potential of hydrogen (negative logarithm of the hydrogen ion concentration).

Memorandum

Date: May 31, 2012
To: File
From: Ken Salaz
Subject: Inorganic Data Review and Validation – SNL
Site: Burn Site GWM
AR/COC: 614071
SDG: 302715
Laboratory: GEL
Project/Task: 146422.10.11.01
Analysis: General Chemistry

See the attached Data Validation Worksheets for supporting documentation on the data review and validation. This validation was performed according to SNL/NM ER Project AOP 00-03 Rev 3.

Summary

Two samples were prepared and analyzed with accepted procedures using methods EPA314.0 (Perchlorate), EPA9056 (Anions), and EPA353.2 (nitrate/nitrite as nitrogen). Data were reported for all required analytes. No problems were identified with the data package that result in the qualification of data.

Data are acceptable, and reported QC measures appear to be adequate. The following sections discuss the data review and validation.

Holding Times and Preservation

The samples were analyzed within the prescribed holding times and properly preserved.

Calibration

The initial and continuing calibrations met all QC acceptance criteria.

Blanks

No target analytes were detected in the blanks with the following exceptions.

Anions:

Chloride was detected in EB sample 302619-001 from COC 614070 associated with the samples in this SDG . All associated sample results were >5X the blank concentration and, therefore, will not be qualified.

Laboratory Control Sample (LCS)

All LCS recoveries met QC acceptance criteria.

Matrix Spike (MS)

All MS recoveries met QC acceptance criteria.

Laboratory Replicate

The replicate analyses met all QC acceptance criteria.

Detection Limits/Dilutions

All detection limits were properly reported. No samples were diluted with the following exceptions.

Anions:

The samples were diluted 10X for chloride & sulfate and 50X for nitrate/nitrite due to high concentrations. All associated matrix QC samples were analyzed at relative dilution factors $\leq 5X$ those of the samples.

Other QC

Field duplicate pairs were submitted on this COC(s). There are no “required” review criteria for field duplicate analyses comparability; no data will be qualified as a result.

No other specific issues that affect data quality were identified.

From: Ken Salaz

Subject: Inorganic Data Review and Validation – SNL
Site: SWMU 68 GWM (ER)
AR/COC: 614079, 614080
SDG: 302948
Laboratory: GEL
Project/Task: 98026.01.13
Analysis: General Chemistry

See the attached Data Validation Worksheets for supporting documentation on the data review and validation. This validation was performed according to SNL/NM ER Project AOP 00-03 Rev 3.

Summary

Two samples were prepared and analyzed with accepted procedures using methods EPA9012A (Total CN), EPA314.0 (Perchlorate), EPA9056 (Anions), EPA353.2 (nitrate/nitrite as nitrogen), EPA7196A (Cr+6), and SM2320B (Alkalinity). Data were reported for all required analytes. Problems were identified with the data package that result in the qualification of data.

Total CN:

1. The ICAL intercept was negative with an absolute value $>$ but $<$ 3X the MDL. Also, Total CN was detected in the ICB and CCB at negative concentrations with absolute values $>$ the MDL but $<$ the PQL. The associated sample results were all NDs and, therefore, will be **qualified UJ, I5, B4**.

Anions:

1. The ICAL intercept for chloride was $>$ the MDL. The associated result of sample 302788-019 was a detect $<$ 3X the intercept and, therefore, will be **qualified J+, I5**

Data are acceptable, and reported QC measures appear to be adequate. The following sections discuss the data review and validation.

Holding Times and Preservation

The samples were prepared and analyzed within the prescribed holding times and properly preserved.

Calibration

The initial and continuing calibrations met QC acceptance criteria except as noted above in the Summary Section and the following.

Anions:

The ICAL intercepts for chloride, fluoride, and sulfate were > the MDL. However, the associated sample results not qualified above in the Summary section were all either ND or >3X the intercept and, therefore, will not be qualified.

Blanks

No target analytes were detected in any of the blanks except as noted above in the Summary section and the following. In the EB, chloride was detected. However, this EB is associated with samples in another data package (COC 614081) and should not be applied to samples in this SDG.

Laboratory Control Sample (LCS)

All LCS recoveries met QC acceptance criteria.

Matrix Spike (MS)

All MS recoveries met QC acceptance criteria.

Anions, Perchlorate:

It should be noted that the MS analyses were performed on SNL samples of similar matrix from other SDGs. No sample data will be qualified as a result.

Laboratory Replicate

The replicate analyses met all QC acceptance criteria.

Anions, Perchlorate:

It should be noted that the Replicate analyses were performed on SNL samples of similar matrix from other SDGs. No sample data will be qualified as a result.

Detection Limits/Dilutions

All detection limits were properly reported. No samples were diluted with the following exceptions.

Anions & Nitrate/Nitrite as Nitrogen:

Sample 302788-005 was diluted 5X for chloride & sulfate, and sample -006 was diluted 10X for nitrate/nitrite as nitrogen due to high concentrations or matrix interference. All associated matrix QC samples were analyzed at relative dilution factors $\leq 5X$ those of the samples.

Other QC

One EB was submitted on the AR/COC.

No other specific issues that affect data quality were identified.

Subject: Inorganic Data Review and Validation – SNL
Site: SWMU 68 GWM (ER)
AR/COC: 614081
SDG: 302859
Laboratory: GEL
Project/Task: 98026.01.13
Analysis: General Chemistry

See the attached Data Validation Worksheets for supporting documentation on the data review and validation. This validation was performed according to SNL/NM ER Project AOP 00-03 Rev 3.

Summary

Two samples were prepared and analyzed with accepted procedures using methods EPA9012A (Total CN), EPA314.0 (Perchlorate), EPA9056 (Anions), EPA353.2 (nitrate/nitrite as nitrogen), EPA7196A (Cr+6), and SM2320B (Alkalinity). Data were reported for all required analytes. Problems were identified with the data package that result in the qualification of data.

Total CN:

1. The ICAL intercept was negative with an absolute value $>$ the MDL but $<$ 3X the MDL. Also, Total CN was detected in the ICB and CCB at negative concentrations with absolute values $>$ the MDL but $<$ the PQL. The associated sample results were all NDs and, therefore, will be **qualified UJ, I5, B4**.

Data are acceptable, and reported QC measures appear to be adequate. The following sections discuss the data review and validation.

Holding Times and Preservation

The samples were prepared and analyzed within the prescribed holding times and properly preserved.

Calibration

The initial and continuing calibrations met QC acceptance criteria except as noted above in the Summary Section and the following.

Anions:

The ICAL intercepts for fluoride, chloride, and sulfate were > the MDL. However, the associated sample results were all >3X the intercept and, therefore, will not be qualified.

Blanks

No target analytes were detected in any of the blanks except for the following.

Anions:

In EB sample 302788-019 from COC 614080, chloride was detected. However, this sample result was qualified U due to blank contamination and, therefore, will not be applied to sample results.

Laboratory Control Sample (LCS)

All LCS recoveries met QC acceptance criteria.

Matrix Spike (MS)

All MS recoveries met QC acceptance criteria.

Total cyanide, Anions, Perchlorate, & Nitrate/Nitrite as Nitrogen:

It should be noted that the MS analyses were performed on SNL samples of similar matrix from other SDGs. No sample data will be qualified as a result.

Laboratory Replicate

The replicate analyses met all QC acceptance criteria.

Total cyanide, Anions, Perchlorate, Total CN, & Nitrate/Nitrite as Nitrogen:

It should be noted that the Replicate analyses were performed on SNL samples of similar matrix from other SDGs. No sample data will be qualified as a result.

Detection Limits/Dilutions

All detection limits were properly reported. No samples were diluted with the following exceptions.

Anions & Nitrate/Nitrite as Nitrogen:

The samples were diluted 5X for chloride & sulfate and 10X for nitrate/nitrite as nitrogen due to high concentrations. All associated matrix QC samples were analyzed at relative dilution factors $\leq 5X$ those of the samples.

Other QC

A field duplicate pair was submitted on the COC. There are no "required" review criteria for field duplicate analyses comparability. No sample data will be qualified as a result.

No other specific issues that affect data quality were identified.

From: Ken Salaz

Subject: Inorganic Data Review and Validation – SNL
Site: SWMU 68 GWM (ER)
AR/COC: 614082
SDG: 302948
Laboratory: GEL
Project/Task: 98026.01.13
Analysis: General Chemistry

See the attached Data Validation Worksheets for supporting documentation on the data review and validation. This validation was performed according to SNL/NM ER Project AOP 00-03 Rev 3.

Summary

One sample was prepared and analyzed with accepted procedures using methods EPA9012A (Total CN), EPA314.0 (Perchlorate), EPA9056 (Anions), EPA353.2 (nitrate/nitrite as nitrogen), EPA7196A (Cr+6), and SM2320B (Alkalinity). Data were reported for all required analytes. Problems were identified with the data package that result in the qualification of data.

Total CN:

1. The ICAL intercept was negative with an absolute value > the MDL but < 3X the MDL. Also, Total CN was detected in the ICB and CCB at negative concentrations with absolute values > the MDL but < the PQL. The associated sample result was ND and, therefore, will be **qualified UJ, I5, B4**.

Data are acceptable, and reported QC measures appear to be adequate. The following sections discuss the data review and validation.

Holding Times and Preservation

The sample was prepared and analyzed within the prescribed holding times and properly preserved.

Calibration

The initial and continuing calibrations met QC acceptance criteria except as noted above in the Summary Section and the following.

Anions:

The ICAL intercepts for fluoride, chloride, and sulfate were > the MDL. However, the associated sample results were all >3X the intercept and, therefore, will not be qualified.

Blanks

No target analytes were detected in any of the blanks.

Laboratory Control Sample (LCS)

All LCS recoveries met QC acceptance criteria.

Matrix Spike (MS)

All MS recoveries met QC acceptance criteria.

Anions, Perchlorate, & Nitrate/Nitrite as Nitrogen:

It should be noted that the MS analyses were performed on SNL samples of similar matrix from other SDGs. No sample data will be qualified as a result.

Laboratory Replicate

The replicate analyses met all QC acceptance criteria.

Anions, Perchlorate, & Nitrate/Nitrite as Nitrogen:

It should be noted that the Replicate analyses were performed on SNL samples of similar matrix from other SDGs. No sample data will be qualified as a result.

Detection Limits/Dilutions

All detection limits were properly reported. No samples were diluted with the following exceptions.

Anions & Nitrate/Nitrite as Nitrogen:

The samples were diluted 5X for chloride, sulfate, and nitrate/nitrite as nitrogen due to high concentrations. All associated matrix QC samples were analyzed at relative dilution factors $\leq 5X$ those of the samples.

Other QC

No other specific issues that affect data quality were identified.

Memorandum

Date: June 23, 2012
To: File
From: Marcia Hilchey
Subject: Inorganic Data Review and Validation – SNL
Site: SWMU 8/58 GWM
AR/COC: 614155, -156, -157
SDG: 303091
Laboratory: GEL
Project/Task: 98026.01.12
Analysis: General Chemistry

See the attached Data Validation Worksheets for supporting documentation on the data review and validation. This validation was performed according to SNL/NM ER Project AOP 00-03 Rev 3.

Summary

Four samples were prepared and analyzed with accepted procedures using methods EPA 9056 (anions by ion chromatography); EPA 9012A (total cyanide); EPA 314.0 (perchlorate by IC); SM 2320B (alkalinity); and EPA 353.2 (nitrate/nitrite by Cd reduction). Data were reported for all required analytes. Problems were identified with the data package that results in the qualification of data.

Anions:

The ICAL intercept for chloride was positive and > the MDL. The associated result for sample 303091-018 was a detect < 3X the intercept value and will be **qualified J+, I5**.

Total cyanide:

The ICAL intercept for total cyanide was negative, with an absolute value > MDL but ≤2X the PQL. Also, total cyanide was detected in ICB and CCB at a negative value with absolute value > MDL. The total cyanide result for sample -048 was a detect < 5X the MDL and < 3X the absolute value of the intercept and will be **qualified NJ-, I5, B4**. The total cyanide results for samples -009, -023, and -036 were ND and will be **qualified UJ, I5, B4**.

Data are acceptable and reported QC measures appear to be adequate. The following sections discuss the data review and validation.

Holding Times and Preservation

The samples were prepared and analyzed within the prescribed holding times and properly preserved.

Calibration

All initial and continuing calibration met QC acceptance criteria except as noted above in the Summary section and as follows.

Anions:

The ICAL intercepts for fluoride and chloride were positive and > the MDL. Associated sample results that are ND or > 3X the intercept value will not be qualified.

Blanks

No target analytes were detected in the blanks except as noted above in the Summary section and as follows.

Anions:

Chloride was detected in the EB. Associated sample results were > 5X the EB concentration and will not be qualified.

Laboratory Control Sample (LCS)/Laboratory Control Sample Duplicate (LCSD)

All LCS/LCSD acceptance criteria were met.

Matrix Spike (MS)

All MS/PS recoveries met QC acceptance criteria.

Laboratory Replicate

The replicate analyses met all QC acceptance criteria.

Detection Limits/Dilutions

All detection limits were properly reported. No samples were diluted except as follows.

Nitrate/Nitrite:

Samples -005, -032, and -044 were diluted 10X, and sample -019 was diluted 5X.

Anions:

Sample -004 was diluted 5X for chloride and sulfate; samples -031 and -043 were diluted 10X for chloride and sulfate.

All associated batch QC samples were analyzed at dilution factors that resulted in relative dilution factors to the sample that were $\leq 5X$. No sample data will be qualified as a result.

Other QC

EBs and field duplicates were submitted on the AR/COC(s). There are no "required" review criteria for field duplicate analyses comparability; no data will be qualified as a result. No other specific issues that affect data quality were identified.

See the attached Data Validation Worksheets for supporting documentation on the data review and validation. This validation was performed according to SNL/NM ER Project AOP 00-03 Rev 3.

Summary

One sample was prepared and analyzed with accepted procedures using methods EPA9056 (Anions), EPA353.2 (Nitrate/Nitrite), SM2320B (Alkalinity), and EPA314.0 (perchlorate). Data were reported for all required analytes. A problem was identified with the data package that resulted in the qualification of data.

Data are acceptable, and reported QC measures appear to be adequate. The following sections discuss the data review and validation.

Holding Times and Preservation

The sample was prepared and analyzed within the prescribed holding times and properly preserved.

Calibration

The initial and continuing calibrations met QC acceptance criteria except as follows.

Anions:

The ICAL intercepts for chloride, fluoride, and sulfate were > the MDL. All associated sample results were >3X the intercept values and will not be qualified.

Blanks

No target analytes were detected in the blanks.

Laboratory Control Sample (LCS)

All LCS recoveries met QC acceptance criteria.

Matrix Spike (MS)

All MS recoveries met QC acceptance criteria.

Laboratory Replicate

The replicate analyses met all QC acceptance criteria.

Detection Limits/Dilutions

All detection limits were properly reported. The sample was not diluted except as follows.

Anions and Nitrate/Nitrite:

Samples were diluted.

Other QC

No other specific issues that affect data quality were identified.

Anions:

The ICAL intercept for sulfate was > the MDL. The associated sample result was >3X the intercept value and will not be qualified.

Blanks

No target analytes were detected in the blanks.

Laboratory Control Sample (LCS)

All LCS recoveries met QC acceptance criteria.

Matrix Spike (MS)

All MS recoveries met QC acceptance criteria.

Laboratory Replicate

The replicate analyses met all QC acceptance criteria.

Detection Limits/Dilutions

All detection limits were properly reported. The sample was not diluted except as follows.

Anions and Nitrate/Nitrite:

Samples were diluted.

Other QC

No other specific issues that affect data quality were identified.

SECTION III

SOLID WASTE MANAGEMENT UNITS 149 AND 154 QUARTERLY GROUNDWATER MONITORING REPORT, APRIL – JUNE 2012

1.0 Introduction

This section of the Environmental Restoration Operations (ER) Consolidated Quarterly Report (ER Quarterly Report) has been prepared pursuant to the “U.S. Department of Energy (DOE)/Sandia Corporation (Sandia) Response to the New Mexico Environment Department (NMED) letter of April 8, 2010, entitled, *Class 3 Permit Modification Requests for Granting Corrective Action Complete Status for 26 SWMUs/AOCs (Request of March 1, 2006) and 5 Other SWMUs/AOCs (Request of January 7, 2008), Sandia National Laboratories EPA ID #NM5890110518 HWB-SNL-06-007 and HWB-SNL-08-001*” (SNL/NM June 2010). The activities associated with the groundwater monitoring task for Solid Waste Management Units (SWMUs) 149 and 154 at Sandia National Laboratories, New Mexico (SNL/NM) are summarized in this section.

Monitoring wells CTF-MW2 and CTF-MW3 were installed in August 2001. Prior to the June 2012 sampling event, CTF-MW2 and CTF-MW3 had been sampled 16 and 17 times, respectively, for a variety of constituents. Monitoring well CTF-MW3 is located approximately 290 feet to the west and downgradient of SWMU 149 (Figure III-1). Monitoring well CTF-MW2 is located approximately 260 feet to the southwest and downgradient of SWMU 154 (Figure III-2). Both wells are screened in Precambrian bedrock.

This report summarizes the sixth of eight quarterly groundwater sampling events for Coyote Test Field (CTF) monitoring well CTF-MW3, located near SWMU 149 (Building 9930 Septic System), and monitoring well CTF-MW2, located near SWMU 154 (Building 9960 Septic System and Seepage Pits). This groundwater characterization at the two SWMUs is designed to address the requirements of Section VII.D.6 of the Compliance Order on Consent (the Order) (NMED April 2004) and the letter dated April 8, 2010, from the NMED Hazardous Waste Bureau (NMED April 2010). The analytical results discussed in this section correspond to the reporting period of April through June 2012. Monitoring wells CTF-MW3 and CTF-MW2 were sampled on June 16 and June 19, 2012, respectively.

This groundwater sampling event was conducted in conformance with procedures outlined in the “Sampling and Analysis Plan for Collection and Analysis of Additional

Groundwater Samples Collected from Monitoring Well CTF-MW3, Located Near SNL/NM SWMU 149” (SNL/NM June 2010, Attachment 1) and “Sampling and Analysis Plan for Collection and Analysis of Additional Groundwater Samples Collected from Monitoring Well CTF-MW2, Located Near SNL/NM SWMU 154” (SNL/NM June 2010, Attachment 2). These Sampling and Analysis Plans (SAPs) were approved by the NMED in December 2010 (NMED December 2010).

The samples from CTF-MW3 were analyzed for the required constituents, consisting of general chemistry parameters, volatile organic compounds (VOCs), perchlorate, Target Analyte List (TAL) metals, and nitrate plus nitrite (NPN). The samples from CTF-MW2 were analyzed for the required constituents, consisting of general chemistry parameters, VOCs, semivolatile organic compounds (SVOCs), high explosive (HE) compounds, perchlorate, TAL metals, NPN, gross alpha/beta activity, radionuclides by gamma spectroscopy, and uranium.

Analytical results for the June 2012 groundwater samples were compared with the U.S. Environmental Protection Agency (EPA) maximum contaminant levels (MCLs) for drinking water (EPA 2009). No analytical results for the CTF-MW3 groundwater samples exceed the corresponding MCLs. Except for arsenic, none of the analytical results for the CTF-MW2 groundwater samples exceed the MCLs. Arsenic was detected above the MCL of 0.010 milligrams per liter (mg/L) in CTF-MW2 groundwater samples at concentrations of 0.0433 mg/L in the unfiltered sample and 0.0276 mg/L in the filtered sample. These values are comparable to previous sampling results for this monitoring well. The elevated concentrations of arsenic in the groundwater samples are most likely attributable to background because monitoring well CTF-MW2 is screened in a fault-gouge zone in the Precambrian granite. Because of the fine-grained nature and disrupted texture of the rock surrounding CTF-MW2, naturally-occurring arsenic may be more likely to be present in the local groundwater.

Quality control (QC) samples consisting of two trip blank (TB) samples were also submitted for analysis during this quarterly sampling event. The following sections provide descriptions of the field methods used and discussions of the analytical and QC sampling results.

This groundwater sampling event represents the sixth of eight supplemental quarterly events for monitoring wells CTF-MW3 and CTF-MW2. The seventh of the eight supplemental quarterly groundwater sampling events will be conducted during the upcoming quarter (July – September 2012).

2.0 Field Methods and Measurements

The quarterly groundwater sampling field measurements were collected in conformance with the DOE/Sandia Response to the NMED letter of April 8, 2010 (SNL/NM June 2010). Groundwater monitoring at CTF-MW3 and CTF-MW2 was performed according to the SAPs submitted as Attachments 1 and 2 to the DOE/Sandia Response (SNL/NM June 2010) and SNL/NM Administrative Operating Procedures (AOPs) (SNL/NM May 2011) and Field Operating Procedures (FOPs) (SNL/NM January 2012a and January 2012b). Groundwater samples were analyzed for relevant parameters, listed in Table III-1. Table III-2 presents the details for groundwater samples collected from CTF-MW3 and CTF-MW2 during the Second Quarter of Calendar Year (CY) 2012.

2.1 Equipment Decontamination

A portable Bennett™ groundwater sampling system was used to collect the groundwater samples from both wells. The Bennett™ sampling pump and tubing bundle were decontaminated prior to installation into the monitoring wells in accordance with the procedures described in SNL/NM FOP 05-03, “Groundwater Monitoring Equipment Decontamination” (SNL/NM January 2012a).

2.2 Well Evacuation

In accordance with procedures described in SNL/NM FOP 05-01, “Groundwater Monitoring Well Sampling and Field Analytical Measurements” (SNL/NM January 2012b), all wells were purged a minimum of one saturated casing volume (the volume of one length of the saturated screen plus the borehole annulus around the saturated screen interval) and monitored for stability of water quality parameters.

Field water-quality measurements for turbidity, pH, temperature, specific conductance (SC), oxidation-reduction potential (ORP), and dissolved oxygen (DO) were obtained from the wells prior to collecting groundwater samples. Groundwater temperature, SC, ORP, DO, and pH were measured with a YSI™ Model 6920 water quality meter. Turbidity was measured with a HACH™ Model 2100P turbidity meter. Purging continued until four stable measurements for turbidity, pH, temperature, and SC were obtained. Groundwater stability is considered acceptable when the following parameters are achieved:

- Turbidity measurements are within 10%, or less than 5 nephelometric turbidity units
- pH is within 0.1 units

- Temperature is within 1.0 degree Celsius
- SC is within 5% as micromhos per centimeter

Table III-3 summarizes the temperature, pH, SC, and turbidity measurements, which are discussed in Section III.3.1. Field Measurement Logs (Appendix A) documenting details of well purging and water quality measurements have been submitted to the SNL/NM Records Center.

2.3 **Groundwater Sample Collection**

All groundwater samples were collected directly from the sample discharge tubing into laboratory-prepared sample containers. Chemical preservatives for samples intended for chemical analyses were added to the sample containers at the laboratory prior to shipment to SNL/NM. The groundwater samples were submitted to GEL Laboratories LLC (GEL) for chemical analysis using methods outlined in Table III-1. Table III-1 also lists the sample containers and preservation requirements. Section III.3.0 summarizes the analytical results.

The sample identification number, Analysis Request/Chain-of-Custody form number, and the associated groundwater investigation are provided in Table III-2. Chain-of-custody forms are provided in Appendix B.

3.0 **Analytical Results**

Groundwater samples were submitted to GEL for chemical and radiological analyses. Samples were analyzed in accordance with applicable EPA analytical methods (EPA 1980, 1984, 1986, and 1999; Clesceri, et al. 1998; DOE 1990). Groundwater sampling results are compared with established EPA MCLs for drinking water (EPA 2009). Analytical results and method detection limits (MDLs) for samples collected from wells CTF-MW3 and CTF-MW2 are shown in tabulated form in Tables III-4 through III-15. Analytical reports, including certificates of analyses, analytical methods, MDLs, minimum detectable activity (MDA), critical level, practical quantitation limits, dates of analyses, results for QC analyses, and data validation findings are filed in the SNL/NM Records Center.

The analytical data were reviewed and qualified in accordance with AOP 00-03, "Data Validation Procedure for Chemical and Radiochemical Data," Revision 3 (SNL/NM May 2011). Other than the rejected results for potassium-40 in the sample from CTF-MW2 (SWMU 154), no problems were identified with the analytical data that resulted in qualification of the data as unusable. The data are acceptable, and reported QC measures are adequate. The data validation sample findings summary sheets are provided in Appendix C.

3.1 **Field Water Quality Measurements**

SWMU 149, CTF-MW3. Table III-3 summarizes field water quality measurements (turbidity, pH, temperature, SC, ORP, and DO) collected prior to sampling well CTF-MW3.

SWMU 154, CTF-MW2. Table III-3 summarizes field water quality measurements (turbidity, pH, temperature, SC, ORP, and DO) collected prior to sampling well CTF-MW2.

3.2 **Volatile Organic Compounds**

SWMU 149, CTF-MW3. No VOCs were detected at concentrations above established MCLs. The compounds bromodichloromethane, chloroform, dibromochloromethane, and toluene were detected above laboratory MDLs. The VOC dibromochloromethane was qualified as an estimated value during data validation because the initial calibration intercept was below the MDL. Table III-4 summarizes detected VOCs in environmental groundwater samples, and Table III-5 lists the VOC MDLs.

SWMU 154, CTF-MW2. No VOCs were detected at concentrations above established MCLs in the CTF-MW2 environmental sample. The VOC toluene was detected at a concentration of 0.580 micrograms per liter ($\mu\text{g/L}$). Table III-4 summarizes VOCs detected in the environmental sample and Table III-6 lists the VOC MDLs.

3.3 **Semivolatile Organic Compounds**

SWMU 149, CTF-MW3. Analysis of SVOCs is not required for CTF-MW3.

SWMU 154, CTF-MW2. No SVOCs were detected at concentrations above established MCLs in the CTF-MW2 environmental sample. No SVOCs were reported above laboratory MDLs. The SVOC results for 3,3-dichlorobenzidine and

hexachlorocyclopentadiene were qualified as unusable because associated matrix spike and matrix spike duplicate samples were recovered outside acceptance criteria. Table III-6 lists the SVOC MDLs.

3.4 High Explosive Compounds

SWMU 149, CTF-MW3. Analysis of HE compounds is not required for CTF-MW3.

SWMU 154, CTF-MW2. No HE compounds were detected in the CTF-MW2 groundwater sample at concentrations above laboratory MDLs, except RDX [hexahydro-1,3,5-trinitro-1,3,5-triazine]. RDX was detected in the environmental sample collected from CTF-MW2 at a concentration of 0.199 µg/L. Table III-4 summarizes the HE compounds detected in the environmental groundwater sample, and Table III-7 lists the HE compound MDLs.

3.5 Nitrate Plus Nitrite

SWMU 149, CTF-MW3. Table III-8 summarizes NPN results. NPN values were compared with the nitrate MCL of 10 mg/L. No NPN was detected above the nitrate MCL. The result for NPN was reported at a concentration of 5.39 mg/L in the CTF-MW3 environmental sample.

SWMU 154, CTF-MW2. Table III-8 summarizes NPN results for CTF-MW2. NPN values were compared with the nitrate MCL of 10 mg/L. No NPN was detected above the nitrate MCL. NPN was reported at a concentration of 0.278 mg/L in the CTF-MW2 environmental sample.

3.6 Anions and Alkalinity

SWMU 149, CTF-MW3. Table III-9 summarizes alkalinity and major anion (as bromide, chloride, fluoride, and sulfate) results for CTF-MW3. No parameters were detected above established MCLs.

SWMU 154, CTF-MW2. Table III-9 summarizes alkalinity and major anion (as bromide, chloride, fluoride, and sulfate) results for CTF-MW2. No parameters were detected above established MCLs.

3.7 Perchlorate

SWMU 149, CTF-MW3. Perchlorate was not detected above the NMED-specified screening level/MDL of 4 µg/L (0.004 mg/L) in the sample from CTF-MW3. Table III-10 presents the perchlorate results.

SWMU 154, CTF-MW2. Perchlorate was not detected above the NMED-specified screening level/MDL of 4 µg/L (0.004 mg/L) in the sample from CTF-MW2. Table III-10 presents the perchlorate results.

Perchlorate results are discussed in more detail in Section II of this ER Quarterly Report.

3.8 Metals

Metal analyses were conducted for filtered and unfiltered groundwater samples. Groundwater samples obtained for total metal analyses are collected without filtering, and dissolved metal samples are collected by filtering the sample prior to analysis. TAL metals in both the unfiltered and filtered fractions were analyzed for all samples. The sample from CTF-MW2 also included analysis of uranium in both the unfiltered and filtered fractions.

SWMU 149, CTF-MW3. No metal parameters were detected above established MCLs in any groundwater sample. Metal results for both unfiltered and filtered samples from CTF-MW3 are summarized in Tables III-11 and III-12, respectively.

SWMU 154, CTF-MW2. No metals were detected above established MCLs in the CTF-MW2 groundwater sample, except for arsenic. Arsenic was detected above the MCL of 0.010 mg/L with total arsenic reported at a concentration of 0.0433 mg/L, and dissolved arsenic at 0.0276 mg/L. The elevated concentrations of arsenic in the groundwater sample are most likely attributable to background because monitoring well CTF-MW2 is screened in a fault-gouge zone in the Precambrian granite, as noted in Section III.1.0. Unfiltered and filtered metal results for CTF-MW2 are summarized in Tables III-13 and III-14, respectively. In addition, arsenic concentrations since March 2002 are plotted on Figure III-3.

3.9 **Gamma Spectroscopy and Radioisotopic Analyses**

SWMU 149, CTF-MW3. Gamma spectroscopy analysis is not required for CTF-MW3.

SWMU 154, CTF-MW2. The CTF-MW2 groundwater sample was screened for gamma-emitting radionuclides and gross alpha/beta activity (EPA 1980 and DOE 1990). An additional sample for isotopic uranium was collected to support evaluation of gross alpha activity results. The results for gamma spectroscopy, gross alpha/beta activity, and isotopic uranium are presented in Table III-15.

Gamma spectroscopy activities for short-list radionuclides are less than the associated MDAs, except for potassium-40. The result for potassium-40 activity was qualified as unusable during data validation because the peak could not be identified.

Radioisotopic analyses included gross alpha, gross beta, and isotopic uranium analyses. Gross alpha activity is measured as a screening tool and, according to Title 40, Code of Federal Regulations, Parts 9, 141, and 142, Table I-4, does not include uranium, which is measured independently. Therefore, gross alpha activity measurements were corrected by subtracting out the uranium activity.

The corrected gross alpha activity is below the MCL of 15 picocuries per liter (pCi/L). Gross beta results do not exceed established MCLs. Isotopic uranium-233/234 was reported at 56.9 ± 7.48 pCi/L, uranium-235/236 at 1.02 ± 0.376 pCi/L, and uranium-238 at 8.96 ± 1.47 pCi/L. In this region, naturally occurring uranium in groundwater is elevated due to contact with bedrock, which contains minerals high in uranium.

3.10 **Sample Results Exceeding Maximum Contaminant Levels**

Table III-16 lists the results for all constituents that have been detected at concentrations exceeding the EPA MCLs (EPA 2009) during all quarterly sampling events. The only constituent exceeding MCLs in samples collected during this quarter consists of arsenic, which was detected in the CTF-MW2 samples. Figure III-3 shows the concentrations of arsenic and groundwater elevations over time for CTF-MW2. The elevated concentrations of arsenic in the groundwater samples are most likely attributable to background because monitoring well CTF-MW2 is screened in a fault-gouge zone in the Precambrian granite.

4.0 **Quality Control Samples**

Field and laboratory QC samples are prepared to determine the accuracy of the methods used and to detect inadvertent sample contamination that may have occurred during the sampling and analysis process. The following sections discuss each sample type.

4.1 **Field Quality Control Samples**

Field QC samples included TB samples. According to the approved SAPs for SWMUs 149 and 154 (SNL/NM June 2010, Attachments 1 and 2), QC samples for environmental duplicate, field blank, and equipment blank samples were not required during this sampling event. The TB samples were submitted for analysis along with the groundwater samples in accordance with QC procedures specified in the SAPs.

TB samples are submitted whenever samples are collected for VOC analyses to assess whether contamination of the samples has occurred during shipment and storage. TB samples consist of laboratory reagent-grade water with hydrochloric acid preservative contained in 40-milliliter volatile organic analysis vials prepared by the analytical laboratory, which accompany the empty sample containers supplied by the laboratory. The TB samples were brought to the field and accompanied each sample shipment.

TB samples were submitted with the samples collected during the June 2012 sampling event. No VOCs were detected above associated laboratory MDLs in the TB samples.

4.2 **Laboratory Quality Control Samples**

Internal laboratory QC samples, including method blanks and duplicate laboratory control samples, were analyzed concurrently with all groundwater samples. All chemical data were reviewed and qualified in accordance with AOP 00-03, "Data Validation Procedure for Chemical and Radiochemical Data" (SNL/NM May 2011).

Although some analytical results were qualified during the data validation process, no significant data quality problems were noted for project constituents of concern. The data validation sample findings summary sheets are provided in Appendix C. The data are acceptable, and reported QC measures are adequate.

4.3 **Variations and Nonconformances**

No variations or nonconformances from the requirements in the Groundwater Monitoring SAPs for SWMUs 149 and 154 (SNL/NM June 2010, Attachments 1 and 2) or project-specific issues were identified during the June 2012 sampling activities at CTF-MW3 and CTF-MW2.

5.0 **Summary**

During the Second Quarter of CY 2012, samples were collected from monitoring well CTF-MW3, located near SWMU 149, and CTF-MW2, located near SWMU 154, representing the sixth of eight required quarterly groundwater sampling events. Sampling results were compared with EPA MCL guidelines for drinking water (EPA 2009).

Analytical parameters for CTF-MW3 samples include VOCs, NPN, major anions, alkalinity, TAL total metals, and perchlorate. No parameters were detected above established MCLs. All groundwater monitoring data for CTF-MW3 are comparable to previous results.

Analytical parameters for CTF-MW2 include VOCs, SVOCs, HE compounds, NPN, major anions, alkalinity, TAL total metals plus uranium, perchlorate, radionuclides by gamma spectroscopy, gross alpha/beta activity, and isotopic uranium. No parameters were detected above established MCLs, except for arsenic. Arsenic detections exceed the MCL of 0.010 mg/L in the CTF-MW2 groundwater sample at concentrations of 0.0433 mg/L in the unfiltered sample and 0.0276 mg/L in the filtered samples. The elevated concentrations of arsenic in the groundwater samples are most likely attributable to background because monitoring well CTF-MW2 is screened in a fault-gouge zone in the Precambrian granite. These values are comparable to previous results.

Table III-1

Laboratory Analytical Methods, Container Types, and Preservation Requirements for SWMUs 149 and 154 Groundwater Samples

| Analysis | Analytical Method^a | Volume and Container Type/ Preservation Requirements |
|---|--------------------------------------|---|
| Volatile Organic Compounds | EPA 8260B | 3 x 40-mL glass, HCl, 4°C |
| Semivolatile Organic Compounds | EPA 8270C | 3 x 1-L Amber Glass, 4°C |
| High Explosives | EPA 8321A | 4 x 1-L Amber Glass, 4°C |
| Metals ^b | EPA 6010/6020/7470 | 1 x 500-mL polyethylene, HNO ₃ , 4°C |
| Perchlorate | EPA 314.0 | 1 x 250-mL polyethylene, 4°C |
| Major Anions and Cations ^c | EPA 6020/7470/9056 | 1 x 500-mL polyethylene, 4°C |
| Alkalinity as Total, Carbonate, and Bicarbonate | SM 2320B | 1 x 500-mL polyethylene, 4°C |
| Nitrate plus Nitrite | EPA 353.2 | 1 x 250-mL polyethylene, H ₂ SO ₄ , 4°C |
| Gross Alpha/Beta | EPA 900.0 | 1 x 1-L polyethylene, HNO ₃ , 4°C |
| Gamma Spectroscopy ^d | EPA 901.0 | 1 x 1-L polyethylene, HNO ₃ , 4°C |
| Isotopic Uranium | ASTM D3972-09 | 1 x 1-L polyethylene, HNO ₃ , 4°C |

^bMetals = filtered and unfiltered samples, TAL metals including barium, calcium, magnesium, potassium, and sodium, plus uranium.

^cMajor anions include bromide, chloride, fluoride, and sulfate.

^dGamma spectroscopy = Americium-241, Cesium-137, Cobalt-60, and Potassium-40.

°C = Degrees Celsius.

EPA = U.S. Environmental Protection Agency.

H₂SO₄ = Sulfuric acid.

HCl = Hydrochloric acid.

HNO₃ = Nitric acid.

L = Liter

mL = Milliliter(s).

SM = Standard Method.

SWMU = Solid Waste Management Unit.

TAL = Target Analyte List.

Table III-2
Sample Details for Second Quarter, CY 2012 Groundwater Sampling
Solid Waste Management Units 149 and 154 Groundwater Monitoring Quarterly Assessment
April – June 2012

| Well | Sample Identification | AR/COC Number | Associated Groundwater Investigation |
|-------------|------------------------------|----------------------|---|
| CTF-MW3 | 092535 | 614254 | SWMU 149 |
| CTF-MW2 | 092538 | 614255 | SWMU 154 |

Notes

AR/COC = Analysis Request/Chain of Custody.
CTF = Coyote Test Field.
CY = Calendar Year
MW = Monitoring well.
SWMU = Solid Waste Management Unit.

Table III-3
Summary of Field Water Quality Measurements^a
Solid Waste Management Units 149 and 154 Groundwater Monitoring
Quarterly Assessment, April – June 2012

| Well ID | Sample Date | Temperature (°C) | Specific Conductivity (µmhos/cm) | Oxidation Reduction Potential (mV) | pH | Turbidity (NTU) | Dissolved Oxygen (% Sat) | Dissolved Oxygen (mg/L) |
|-----------------|-------------|------------------|----------------------------------|------------------------------------|------|-----------------|--------------------------|-------------------------|
| SWMU 149 | | | | | | | | |
| CTF-MW3 | 16-Jun-12 | 20.09 | 1530 | 178.7 | 6.89 | 0.19 | 87.4 | 7.84 |
| SWMU 154 | | | | | | | | |
| CTF-MW2 | 19-Jun-12 | 19.58 | 3310 | 34.1 | 6.03 | 0.83 | 1.3 | 0.12 |

Notes

^aField measurements collected prior to sampling.

°C = Degrees Celsius.

% Sat = Percent saturation.

µmhos/cm = Micromhos per centimeter.

CTF = Coyote Test Field.

ID = Identification.

mg/L = Milligrams per liter.

mV = Millivolts.

MW = Monitoring well.

NTU = Nephelometric turbidity units.

pH = Potential of hydrogen (negative logarithm of the hydrogen ion concentration).

SWMU = Solid Waste Management Unit.

Table III-4
Summary of Detected Volatile Organic, Semivolatile Organic, and High Explosive Compounds
Solid Waste Management Units 149 and 154 Groundwater Monitoring
Quarterly Assessment, April – June 2012

| Well ID | Analyte | Result (µg/L) | MDL (µg/L) | PQL (µg/L) | MCL (µg/L) | Laboratory Qualifier ^a | Validation Qualifier ^b | Sample Number | Analytical Method ^c |
|----------------------|----------------------|---------------|------------|------------|------------|-----------------------------------|-----------------------------------|---------------|--------------------------------|
| SWMU 149 | | | | | | | | | |
| CTF-MW3 16-Jun-12 | Bromodichloromethane | 0.500 | 0.300 | 1.00 | NE | J | | 092535-001 | SW846-8260B |
| | Chloroform | 0.710 | 0.300 | 1.00 | NE | J | | 092535-001 | SW846-8260B |

| SWMU 154 | | | | | | | | | |
| CTF-MW2 19-Jun-12 | Toluene | 0.580 | 0.300 | 1.00 | 1000 | J | | 092538-001 | SW846-8260B |
| | RDX | 0.199 | 0.821 | 0.256 | NE | J | | 092538-024 | SW846-8321A |

Notes

µg/L = Micrograms per liter.

CFR = Code of Federal Regulations.

CTF = Coyote Test Field.

EPA = U.S. Environmental Protection Agency.

ID = Identification.

MCL = Maximum contaminant level. Established by the EPA Primary Water Regulations (40 CFR 141.11, Subpart B), National Primary Drinking Water Standards (EPA, 2009).

MDL = Method detection limit. The minimum concentration that can be measured and reported with 99% confidence that the analyte is greater than zero; analyte is matrix-specific.

MW = Monitoring well.

NE = Not established.

PQL = Practical quantitation limit. The lowest concentration of analytes in a sample that can be reliably determined within specified limits of precision and accuracy by that indicated method under routine laboratory operating conditions.

RDX = Hexahydro-trinitro-triazine.

SWMU = Solid Waste Management Unit.

^aLaboratory Qualifier

J = Estimated value, the analyte concentration fell above the effective MDL and below the effective PQL.

^bValidation Qualifier

If cell is blank, then all quality control samples met acceptance criteria with respect to submitted samples.

J+ = The associated numerical value is an estimated quantitation with a suspected positive bias.

^cAnalytical Method

U.S. Environmental Protection Agency, 1986 (and updates), "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods," SW-846, 3rd ed.

U.S. Environmental Protection Agency, 1984, "Methods for Chemical Analysis of Water and Wastes," EPA 600-4-79-020.

Table III-5
Method Detection Limits for Volatile Organic Compounds (EPA Method 8260)
Solid Waste Management Unit 149 Groundwater Monitoring
Quarterly Assessment, April – June 2012

| Analyte | MDL (µg/L) |

Table III-6 (Concluded)
Method Detection Limits for Volatile and Semivolatile Organic Compounds
Solid Waste Management Unit 154 Groundwater Monitoring
Quarterly Assessment, April – June 2012

Notes

^aU.S. Environmental Protection Agency, 1986 (and updates), "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods," SW-846, 3rd ed.

U.S. Environmental Protection Agency, 1984, "Methods for Chemical Analysis of Water and Wastes," EPA 600-4-79-020.

µg/L = Micrograms per liter.

MDL = Method detection limit. The minimum concentration that can be measured and reported with 99% confidence that the analyte is greater than zero; analyte is matrix-specific.

Table III-7
Method Detection Limits for High Explosive Compounds (EPA Method 8321A)
Solid Waste Management Unit 154 Groundwater Monitoring
Quarterly Assessment, April – June 2012

| Analyte | MDL ($\mu\text{g/L}$) |
|------------------------------|----------------------------|
| 1,3,5-Trinitrobenzene | 0.0821 |
| 1,3-Dinitrobenzene | 0.0821 |
| 2,4,6-Trinitrotoluene | 0.0821 |
| 2,4-Dinitrotoluene | 0.0821 |
| 2,6-Dinitrotoluene | 0.0821 |
| 2-Amino-4,6-dinitrotoluene | 0.0821 |
| 2-Nitrotoluene | 0.0841 |
| 3-Nitrotoluene | 0.0821 |
| 4-Amino-2,6-dinitrotoluene | 0.0821 |
| 4-Nitrotoluene | 0.154 |
| HMX | 0.0821 |
| Nitro-benzene | 0.0821 |
| Pentaerythritol tetranitrate | 0.103 |
| RDX | 0.0821 |
| Tetryl | 0.0821 |

Notes

$\mu\text{g/L}$ = Micrograms per liter.
EPA = U.S. Environmental Protection Agency.
HMX = Tetrahexamine tetranitramine.
MDL = Method detection limit. The minimum concentration that can be measured and reported with 99% confidence that the analyte is greater than zero; analyte is matrix-specific.
RDX = Hexahydro-trinitro-triazine.
Tetryl = 2,4,6-trinitrophenylmethylnitramine.

Table III-8
Summary of Nitrate Plus Nitrite Results
Solid Waste Management Units 149 and 154 Groundwater Monitoring
Quarterly Assessment, April – June 2012

| Well ID | Analyte | Result (mg/L) | MDL (mg/L) | PQL (mg/L) | MCL (mg/L) | Laboratory Qualifier ^a | Validation Qualifier ^b | Sample Number | Analytical Method ^c |

SWMU = Solid Waste Management Unit.

^a**Laboratory Qualifier**

U = Analyte is absent or below the method detection limit.

^b**Validation Qualifier**

If cell is blank, then all quality control samples met acceptance criteria with respect to submitted samples.

U = The analyte was analyzed for, but not detected. The associated numerical value is the sample quantitation limit.

Table III-9 (Concluded)
Summary of Anion and Alkalinity Results
Solid Waste Management Units 149 and 154 Groundwater Monitoring
Quarterly Assessment, April – June 2012

Notes (continued)

°Analytical Method

U.S. Environmental Protection Agency, 1986 (and updates), "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods," SW-846, 3rd ed.

U.S. Environmental Protection Agency, 1984, "Methods for Chemical Analysis of Water and Wastes," EPA 600-4-79-020, U.S. Environmental Protection Agency, Washington, D.C. or Clesceri, Greenburg, and Eaton, 1998, *Standard Methods for the Examination of Water and Wastewater*, 20th ed., Method 2320B.

Table III-10
Summary of Perchlorate Results
Solid Waste Management Units 149 and 154 Groundwater Monitoring
Quarterly Assessment, April – June 2012

| Well ID | Perchlorate Result (mg/L) | MDL (mg/L) | PQL (mg/L) | MCL (mg/L) | Laboratory Qualifier ^a | Validation Qualifier ^b | Sample Number | Analytical Method ^c |
|----------------------|---------------------------|------------|------------|------------|-----------------------------------|-----------------------------------|---------------|--------------------------------|
| SWMU 149 | | | | | | | | |
| CTF-MW3 16-Jun-12 | ND | 0.004 | 0.012 | NE | U | | 092535-020 | EPA 314.0 |
| SWMU 154 | | | | | | | | |
| CTF-MW2 19-Jun-12 | ND | 0.004 | 0.012 | NE | U | | 092538-020 | EPA 314.0 |

Notes

- CFR = Code of Federal Regulations.
- CTF = Coyote Test Field.
- EPA = U.S. Environmental Protection Agency.
- ID = Identification.
- MCL = Maximum contaminant level. Established by the EPA Primary Water Regulations (40 CFR 141.11, Subpart B), National Primary Drinking Water Standards (EPA, 2009).
- MDL = Method detection limit. The minimum concentration that can be measured and reported with 99% confidence that the analyte is greater than zero; analyte is matrix-specific.
- mg/L = Milligrams per liter.
- MW = Monitoring well.
- ND = Not detected (at MDL).
- NE = Not established.
- PQL = Practical quantitation limit. The lowest concentration of analytes in a sample that can be reliably determined within specified limits of precision and accuracy by that indicated method under routine laboratory operating conditions.
- SWMU = Solid Waste Management Unit.

^aLaboratory Qualifier

U = Analyte is absent or below the method detection limit.

^bValidation Qualifier

If cell is blank, then all quality control samples met acceptance criteria with respect to submitted samples.

^cAnalytical Method

U.S. Environmental Protection Agency, 1999 (and updates), "Perchlorate in Drinking Water Using Ion Chromatography," EPA 815/R-00-014.

| ID | = Identification. |
| MCL | = Maximum contaminant level. Established by the EPA Primary Water Regulations (40 CFR 141.11, Subpart B), National Primary Drinking Water Standards (EPA, 2009). |
| MDL | = Method detection limit. The minimum concentration that can be measured and reported with 99% confidence that the analyte is greater than zero; analyte is matrix-specific. |
| mg/L | = Milligrams per liter. |
| MW | = Monitoring well. |
| ND | = Not detected (at MDL). |
| ND | = Not detected (at MDL). |
| NE | = Not established. |
| PQL | = Practical quantitation limit. The lowest concentration of analytes in a sample that can be reliably determined within specified limits of precision and accuracy by that indicated method under routine laboratory operating conditions. |

^aLaboratory Qualifier

| | |
|---|--|
| J | = Estimated value, the analyte concentration fell above the effective MDL and below the effective PQL. |
| U | = Analyte is absent or below the method detection limit. |

^bValidation Qualifier

If cell is blank, then all quality control samples met acceptance criteria with respect to submitted samples.

| | |
|----|---|
| J- | = The associated numerical value is an estimated quantity with a suspected negative bias. |
|----|---|

^cAnalytical Method

| | Uranium-238 | 8.96 ± 1.47 | 0.368 | 0.149 | NE | | | 092538-035 | HASL-300 |

Notes

CFR = Code of Federal Regulations

CTF = Coyote Test Field.

EPA = U.S. Environmental Protection Agency.

HASL = Health and Safety Laboratory.

ID = Identification.

MCL = Maximum contaminant level. The following are the MCLs for gross alpha particles and beta particles in community water systems:

15 pCi/L = Gross alpha particle activity, excluding total uranium (40 CFR Parts 9, 141, and 142, Table I-4)

4 mrem/yr = any combination of beta and/or gamma emitting radionuclides (as dose rate).

MDA = The minimal detectable activity or minimum measured activity in a sample required to ensure a 95% probability that the measured activity is accurately quantified above the critical level.

mrem/yr = Millirem per year.

MW = Monitoring well.

NA = Not applicable for gross alpha activities. The MDA or critical level could not be calculated as the gross alpha activity was corrected by subtracting out the total uranium activity.

NE = Not established.

pCi/L = Picocuries per liter.

^aActivities of zero or less are considered to be not detected. Gross alpha activity measurements were corrected by subtracting out the total uranium activity (40 CFR Parts 9, 141, and 142, Table I-4).

^bThe lowest concentration of analytes in a sample that can be reliably determined within specified limits of precision and accuracy by that indicated method under routine laboratory operating conditions. The minimum activity that can be measured and reported with 99% confidence that the analyte is greater than zero; analyte is matrix-specific.

Table III-15 (Concluded)
Summary of Gamma Spectroscopy, Gross Alpha, Gross Beta, and Isotopic Uranium Results
Solid Waste Management Unit 154 Groundwater Monitoring
Quarterly Assessment, April – June 2012

Notes (continued)

^cLaboratory Qualifier

NA = Not applicable.
U = Analyte is absent or below the method detection limit.
X = Data rejected due to peak not meeting identification criteria.

^dValidation Qualifier

If cell is blank, then all quality control samples met acceptance criteria with respect to submitted samples.

BD = Below detection limit as used in radiochemistry to identify results that are not statistically different from zero.
J = The associated value is an estimated quantity.
None = No data validation for corrected gross alpha activity.
R = The data are unusable. Resampling and reanalysis are necessary for verification.

Sample Findings Summary

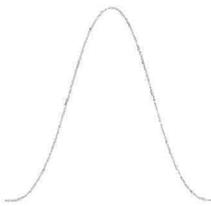

AR/COC: 614254

Page 1 of 1

| Analytical Method | Sample ID | Analyte Name (CAS#) | Qualifier, RC |
|--------------------|--------------------|---------------------------------|---------------|
| SW846 8260B DOE-AL | 092535-001/CTF-MW3 | Dibromochloromethane (124-48-1) | J+, I5 |

All other analyses met QC acceptance criteria; no further data should be qualified.

Memorandum

Date: July 27, 2012
To: File
From: Marcia Hilchey
Subject: Inorganic Data Review and Validation – SNL
Site: SWMU 149 GWM
AR/COC: 614254
SDG: 306314
Laboratory: GEL
Project/Task: 98026.01.14
Analysis: General Chemistry

See the attached Data Validation Worksheets for supporting documentation on the data review and validation. This validation was performed according to SNL/NM ER Project AOP 00-03 Rev 3.

Summary

One sample was prepared and analyzed with accepted procedures using methods EPA9056 (Anions), EPA353.2 (Nitrate/Nitrite), SM2320B (Alkalinity), and EPA314.0 (perchlorate). Data were reported for all required analytes. A problem was identified with the data package that resulted in the qualification of data.

Data are acceptable, and reported QC measures appear to be adequate. The following sections discuss the data review and validation.

Holding Times and Preservation

The sample was prepared and analyzed within the prescribed holding times and properly preserved.

Calibration

The initial and continuing calibrations met QC acceptance criteria except as follows.

Anions:

The ICAL intercepts for chloride, fluoride, and sulfate were > the MDL. All associated sample results were >3X the intercept values and will not be qualified.

Blanks

No target analytes were detected in the blanks.

Laboratory Control Sample (LCS)

All LCS recoveries met QC acceptance criteria.

Matrix Spike (MS)

All MS recoveries met QC acceptance criteria.

Laboratory Replicate

The replicate analyses met all QC acceptance criteria.

Detection Limits/Dilutions

All detection limits were properly reported. The sample was not diluted except as follows.

Anions and Nitrate/Nitrite:
Samples were diluted.

Other QC

No other specific issues that affect data quality were identified.

Memorandum

Date: July 27, 2012
To: File
From: Marcia Hilchey
Subject: Inorganic Data Review and Validation – SNL
Site: SWMU 149 GWM
AR/COC: 614254
SDG: 306414 and 306415
Laboratory: GEL
Project/Task: 98026.01.14
Analysis: Metals

See the attached Data Validation Worksheets for supporting documentation on the data review and validation. This validation was performed according to SNL/NM ER Project AOP 00-03 Rev 3.

Summary

Two samples were prepared and analyzed with approved procedures using methods EPA 6020 (ICP-MS metals), EPA 6010B (ICP metals), and EPA 7470A (CVAA mercury). Data were reported for all required analytes. No problems were identified with the data package that resulted in the qualification of data.

Data are acceptable and reported QC measures appear to be adequate. The following sections discuss the data review and validation.

Holding Times and Preservation

The samples were prepared and analyzed within the prescribed holding times and properly preserved.

ICP-MS Instrument Tune

All instrument tune requirements were met.

Calibration

All initial and continuing calibration met QC acceptance criteria.

Reporting Limit Verification

All CRA/CRI recoveries met QC acceptance criteria.

Blanks

No target analytes were detected in the blanks.

ICP -MS Internal Standards

All internal standards met QC acceptance criteria.

Matrix Spike (MS)

The parent sample concentrations for Ca, Mg, and Na were >4X the spike. However, an MS analysis is not required for these analytes. Therefore, no sample data will be qualified.

ICP; CVAA:

The MS analysis associated with sample 306414-002 was performed on a sample of similar matrix from another SNL SDG. No sample data were qualified as a result.

ICP-MS; CVAA:

The MS analysis associated with sample 306415-001 was performed on a sample of similar matrix from another SNL SDG. No sample data were qualified as a result.

Laboratory Replicate

All replicates met QC acceptance criteria.

ICP; CVAA:

The MS analysis associated with sample 306414-002 was performed on a sample of similar matrix from another SNL SDG. No sample data were qualified as a result.

ICP-MS; CVAA:

The MS analysis associated with sample 306415-001 was performed on a sample of similar matrix from another SNL SDG. No sample data were qualified as a result.

Laboratory Control Sample (LCS)

All LCS QC acceptance criteria were met.

Detection Limits/Dilutions

All detection limits were properly reported. The samples were diluted 10X for Na and Ca.

ICP Interference Check Sample (ICS A and AB)

Results of the ICS A and AB analyses were not evaluated because the concentrations of Al, Ca, Fe, and Mg in the samples were < those in the ICS solutions. No sample data will be qualified as a result.

ICP Serial Dilution

The serial dilution analyses met all QC acceptance criteria.

Other QC

No other specific issues that affect data quality were identified.

Memorandum

Date: July 27, 2012
To: File
From: Marcia Hilchey
Subject: GC/MS Organic Data Review and Validation – SNL
Site: SWMU 149 GWM
AR/COC: 614254
SDG: 306314
Laboratory: GEL
Project/Task: 98026.01.14
Analysis: VOCs

See the attached Data Validation Worksheets for supporting documentation on the data review and validation. Data are evaluated using SNL/NM SMO AOP 00-03 Rev 3.

Summary

Two samples were prepared and analyzed with accepted procedures using method EPA 8260B (VOCs). All compounds were successfully analyzed. A problem was identified with the data package that resulted in the qualification of data.

- 1) The initial calibration intercept for dibromochloromethane was > MDL but < 3X MDL. Associated detected sample results that were < 3X the value of the intercept will be **qualified J+, I5**.

Data are acceptable and reported QC measures appear to be adequate. The following sections discuss the data review and validation.

Holding Times

The samples were analyzed within the prescribed holding times and properly preserved.

Instrument Tune

All instrument tune requirements were met.

Calibration

The initial calibration and continuing calibration data met QC acceptance criteria except as noted above in the Summary section and as follows.

The initial calibration intercept for dibromochloromethane was > MDL but < 3X MDL. Associated ND sample results will not be qualified.

The initial calibration RSD for bromoform was > 15% but < 40%. All associated sample results were ND, and there were no other associated calibration infractions. No sample results were qualified.

The ICV and/or CCV %Ds for vinyl acetate, bromoform, acetone, and 2-hexanone were >20% but < 40% with positive bias. All associated sample results were ND and will not be qualified.

Blanks

No target analytes were detected in the blanks.

Surrogates

All surrogate recoveries met QC acceptance criteria.

Internal Standards

All internal standards met QC acceptance criteria.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

All MS/MSD acceptance criteria were met.

Laboratory Control Sample (LCS)

All LCS acceptance criteria were met.

Detection Limits/Dilutions

All detection limits were properly reported. The samples were not diluted.

Tentatively Identified Compounds (TICs)

TIC reports were not required.

Other QC

A TB was submitted on the AR/COC(s).

No other specific issues that affect data quality were identified.

Sample Findings Summary

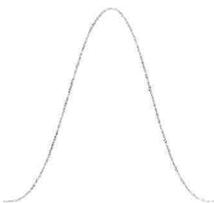

AR/COC: 614255

Page 1 of 1

| Analytical Method | Sample ID | Analyte Name (CAS#) | Qualifier, RC |
|---------------------------|--------------------|-------------------------------------|---------------|
| DOE EML HASL-300, U-02-RC | 092538-035/CTF-MW2 | Uranium-235/236 (13982-70-2) | J, FR7 |

Analysis: General Chemistry

See the attached Data Validation Worksheets for supporting documentation on the data review and validation. This validation was performed according to SNL/NM ER Project AOP 00-03 Rev 3.

Summary

One sample was prepared and analyzed with accepted procedures using methods EPA9056 (Anions), EPA353.2 (Nitrate/Nitrite), SM2320B (Alkalinity), and EPA314.0 (perchlorate). Data were reported for all required analytes. A problem was identified with the data package that resulted in the qualification of data.

Data are acceptable, and reported QC measures appear to be adequate. The following sections discuss the data review and validation.

Holding Times and Preservation

The sample was prepared and analyzed within the prescribed holding times and properly preserved.

Calibration

The initial and continuing calibrations met QC acceptance criteria except as follows.

Anions:

The ICAL intercept for sulfate was > the MDL. The associated sample result was >3X the intercept value and will not be qualified.

Blanks

No target analytes were detected in the blanks.

Laboratory Control Sample (LCS)

All LCS recoveries met QC acceptance criteria.

Matrix Spike (MS)

All MS recoveries met QC acceptance criteria.

Laboratory Replicate

The replicate analyses met all QC acceptance criteria.

Detection Limits/Dilutions

All detection limits were properly reported. The sample was not diluted except as follows.

Anions and Nitrate/Nitrite:

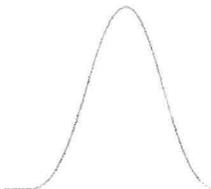

Samples were diluted.

Other QC

No other specific issues that affect data quality were identified.

See the attached Data Validation Worksheets for supporting documentation on the data review and validation. Data are evaluated using SNL/NM SMO AOP 00-03 Rev 3.

Summary

One sample was prepared and analyzed with accepted procedures using method EPA 8321A Mod (HE by LCMSMS). All compounds were successfully analyzed. Problems were identified with the data package that result in the qualification of data.

- 1) M-nitrotoluene and p-nitrotoluene had initial calibration response factors of < 0.05 but > 0.01 . All associated sample results were ND and will be **qualified UJ, I4**.

Data are acceptable and reported QC measures appear to be adequate. The following sections discuss the data review and validation.

Holding Times

The sample was extracted and analyzed within the prescribed holding times and properly preserved.

Calibration

All initial and continuing calibration met QC acceptance criteria except as noted above in the Summary section.

Reporting Limit Verification

All CRI recoveries met QC acceptance criteria.

Blanks

No target analytes were detected in the blanks with the following exception. HMX was detected in the MB at > PQL. The associated sample result was ND and will not be qualified.

Surrogates

All surrogate recoveries met QC acceptance criteria.

Internal Standards

All internal standards met QC acceptance criteria.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The MS/MSD analyses met QC acceptance criteria.

Laboratory Control Sample (LCS)

All LCS QC acceptance criteria were met.

Detection Limits/Dilutions

All detection limits were properly reported. According to laboratory procedure, all sample and QC extracts were diluted 2X with HPLC grade water.

Other QC

No other specific issues that affect data quality were identified.

See the attached Data Validation Worksheets for supporting documentation on the data review and validation. This validation was performed according to SNL/NM ER Project AOP 00-03 Rev 3.

Summary

One sample was prepared and analyzed with approved procedures using methods EPA 901.1 (gamma spec – short list), EPA 900.0 (gross alpha/beta), and HASL 300, U-02-RC Mod (Alpha Spec U). Problems were identified with the data package that result in the qualification of data.

Gamma Spec, Iso-U; Gross Alpha/Beta:

- 1) All sample results which were either < the associated 2-sigma TPU or < the associated MDA will be **qualified BD, FR3**.
- 2) The U-235/236 sample result was > MDA but <3X the associated MDA and will be **qualified J, FR7**.

Gamma Spec:

- 1) The K-40 result for sample 306356-009 was X-flagged by the laboratory due to the peak not meeting identification criteria and will be **qualified R, Z2**.

Data are acceptable, except as noted above, and reported QC measures appear to be adequate. The following sections discuss the data review and validation.

Holding Times and Preservation

The samples were analyzed within the prescribed holding times and properly preserved.

Quantification

All quantification criteria were met except as noted above in the Summary section.

Calibration

The case narratives stated that the instruments used were properly calibrated.

Blanks

No target analytes were detected in the blanks at concentrations > the MDA and 2-sigma TPU.

Tracer/Carrier Recovery

All tracer/carrier recoveries met QC acceptance criteria.

Matrix Spike (MS)

All MS recoveries met QC acceptance criteria.

Laboratory Replicate

All replicate error ratio acceptance criteria were met.

Laboratory Control Sample (LCS)

All LCS recoveries met QC acceptance criteria.

Detection Limits/Dilutions

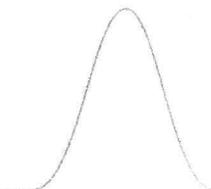

All required detection limits were met. No dilutions were required.

Other QC

No other specific issues that affect data quality were identified.

See the attached Data Validation Worksheets for supporting documentation on the data review and validation. Data are evaluated using SNL/NM SMO AOP 00-03 Rev 3.

Summary

One sample was prepared and analyzed with accepted procedures using method EPA 8270C (SVOCs). All compounds were successfully analyzed. Problems were identified with the data package that resulted in the qualification of data.

- 1) The MS and/or MSD recoveries for di-n-butylphthalate; diethylphthalate; and 4-chloroaniline were < the LAL but > 10%. All associated sample results were ND and will be **qualified UJ, MS3**.
- 2) The MS/MSD RPD for 4-chloroaniline was > the UAL. The associated sample result was ND and will be **qualified UJ, MS5**.
- 3) The MS and MSD recoveries for 3,3'-dichlorobenzidine and hexachlorocyclopentadiene were < 10%. The associated sample results were ND and will be **qualified R, MS3**.

Data are acceptable, except as noted above, and reported QC measures appear to be adequate. The following sections discuss the data review and validation.

Holding Times

The sample was prepared and analyzed within the prescribed holding times and properly preserved.

Instrument Tune

All instrument tune requirements were met.

Calibration

The initial calibration and continuing calibration data met QC acceptance criteria except as follows.

The ICAL intercepts for 2,4-dinitrophenol; pentachlorophenol; and 2-methyl-4,6-dinitrophenol were > the MDL. The associated sample results were all NDs and will not be qualified.

The CCV %Ds for seven target compounds were >20% but <40% with negative bias. The associated sample results were ND, with no other calibration infractions, and will not be qualified.

Blanks

No target analytes were detected in the blank.

Surrogates

All surrogate recoveries met QC acceptance criteria.

Internal Standards

All internal standards met QC acceptance criteria.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

All MS/MSD acceptance criteria were met except as noted above in the Summary section.

The MS/MSD analyses were performed on a sample of similar matrix from another SNL SDG. No sample data were qualified as a result.

Laboratory Control Sample (LCS)

All LCS acceptance criteria were met with the following exceptions. The LCS %Rs for 2-nitrophenol and hexachlorocyclopentadiene were < the LAL. These infractions are within the allowable marginal exceedances. No sample results will be qualified.

Detection Limits/Dilutions

All detection limits were properly reported. The sample was not diluted.

Tentatively Identified Compounds (TICs)

TIC reports were not required.

Other QC

An EB was submitted on the AR/COC(s). No other specific issues that affect data quality were identified.

SECTION IV

SOLID WASTE MANAGEMENT UNITS 8/58 AND 68 QUARTERLY GROUNDWATER MONITORING REPORT, APRIL – JUNE 2012

1.0 Introduction

This section of the Environmental Restoration Operations (ER) Consolidated Quarterly Report (ER Quarterly Report) has been prepared pursuant to the “SWMU 68 and SWMUs 8/58 Groundwater Characterization Work Plans – U.S. Department of Energy (DOE)/Sandia Corporation (Sandia) Response to the New Mexico Environment Department (NMED) letter of April 8, 2010, entitled, *Class 3 Permit Modification Requests for Granting Corrective Action Complete Status for 26 SWMUs/AOCs (Request of March 1, 2006) and 5 Other SWMUs/AOCs (Request of January 7, 2008), Sandia National Laboratories, EPA ID #NM5890110518 HWB-SNL-06-007 and HWB-SNL-08-001*” (SNL/NM September 2010) and the NMED approval of “Solid Waste Management Units 8 and 58, Proposed Groundwater Monitoring Well Location Adjustment” (NMED June 2011). The activities associated with the groundwater monitoring task for Solid Waste Management Units (SWMUs) 8/58 and 68 at Sandia National Laboratories, New Mexico (SNL/NM) are summarized in this section.

The third of eight quarterly groundwater sampling events occurred in April 2012 for Coyote Canyon Blast Area (CCBA) monitoring wells CCBA-MW1 and CCBA-MW2, located within SWMUs 8/58, and monitoring wells OBS-MW1, OBS-MW2, and OBS-MW3, located within SWMU 68 (Old Burn Site). Monitoring wells CCBA-MW1, CCBA-MW2, OBS-MW1, OBS-MW2, and OBS-MW3 were installed in August 2011 (SNL/NM November 2011). CCBA-MW1 is located at the southwestern corner of SWMU 8, approximately 0.2 miles north of the ephemeral channel in Lurance Canyon and approximately 0.7 miles east of Coyote Springs (Figure IV-1). CCBA-MW2 is located near the center of SWMU 58, approximately 0.4 miles north of the ephemeral channel in Lurance Canyon and approximately 1 mile northeast of Coyote Springs (Figure IV-1). OBS-MW1, OBS-MW2, and OBS-MW3 are located at SWMU 68 in the Coyote Test Field, approximately 0.6 miles southwest of the Starfire Optical Range (Figure IV-2).

The supplemental groundwater monitoring at the five newly installed monitoring wells is designed to address the requirements of Section VII.D.6 of the Compliance Order on Consent (the Order) (NMED April 2004) and the letter dated April 8, 2010, from the NMED Hazardous Waste Bureau (NMED April 2010). The analytical results discussed in

this report correspond to the Second Quarter, Calendar Year (CY) 2012 reporting period (April – June 2012).

This groundwater sampling event was conducted in conformance with procedures outlined in the “Groundwater Characterization Work Plan for SWMU 8 – Open Dump (Coyote Canyon Blast Area) and SWMU 58 – Coyote Canyon Blast Area, Foothills Test Area” and “Groundwater Characterization Work Plan for SWMU 68, Old Burn Site” (SNL/NM September 2010). These Work Plans were approved by the NMED in January 2011 (NMED January 2011).

Monitoring wells CCBA-MW1 and CCBA-MW2 were sampled on April 23 and April 24, 2012, respectively. The samples were analyzed for the required constituents, consisting of volatile organic compounds (VOCs), semivolatile organic compounds (SVOCs), high explosive (HE) compounds, nitrate plus nitrite (NPN), major anions (as bromide, chloride, fluoride, and sulfate), major cations (as calcium, magnesium, potassium, and sodium), alkalinity, Target Analyte List (TAL) metals plus uranium, perchlorate, total cyanide, radionuclides by gamma spectroscopy, gross alpha/beta activity, and isotopic uranium.

Monitoring wells OBS-MW1, OBS-MW2, and OBS-MW3 were sampled from April 17 to April 19, 2012. The samples were analyzed for the required constituents, consisting of VOCs, SVOCs, HE compounds, NPN, major anions (as bromide, chloride, fluoride, and sulfate), major cations (as calcium, magnesium, potassium, and sodium), alkalinity, TAL metals plus uranium, hexavalent chromium, perchlorate, total cyanide, radionuclides by gamma spectroscopy, gross alpha/beta activity, and isotopic uranium.

Analytical results for the groundwater samples were compared with the U.S. Environmental Protection Agency (EPA) maximum contaminant levels (MCLs) for drinking water (EPA 2009). Except for fluoride, none of the analytical results for the groundwater samples from SWMUs 8/58 exceed the MCLs. Fluoride was detected above the established MCL of 4.0 milligrams per liter (mg/L) in the CCBA-MW1 environmental sample at a concentration of 4.93 mg/L. Fluoride in both the CCBA-MW2 environmental sample and the duplicate environmental sample exceed the method detection limit (MDL) at a concentration of 1.54 mg/L. No analytical results for the SWMU 68 groundwater samples exceed the corresponding MCLs.

Quality control (QC) samples consisting of duplicate environmental, equipment blank (EB), trip blank (TB), and field blank (FB) samples were also submitted for analysis

during this quarterly sampling event. The following sections provide descriptions of the field methods used and discussions of the analytical and QC sampling results.

This groundwater sampling event represents the third of eight supplemental quarterly events for the five monitoring wells. The fourth of the eight supplemental quarterly groundwater sampling events will be conducted during the upcoming quarter (July to September 2012).

2.0 **Field Methods and Measurements**

The quarterly groundwater sampling field measurements were collected in conformance with the DOE/Sandia Response to the NMED letter of April 8, 2010 (SNL/NM September 2010). Groundwater monitoring at SWMUs 8/58 and 68 was performed according to the Work Plans submitted as Attachments A and B to the DOE/Sandia Response (SNL/NM September 2010) and SNL/NM Administrative Operating Procedures (AOPs) (SNL/NM May 2011) and Field Operating Procedures (FOPs) (SNL/NM January 2012a and January 2012b). Groundwater samples were analyzed for relevant parameters, listed in Table IV-1. Table IV-2 presents the details for groundwater samples collected from all five monitoring wells during Second Quarter, CY 2012.

2.1 **Equipment Decontamination**

A portable Bennett™ groundwater sampling system was used to collect the groundwater samples from both wells. The Bennett™ sampling pump and tubing bundle were decontaminated prior to installation into the monitoring wells in accordance with the procedures described in SNL/NM FOP 05-03, “Groundwater Monitoring Equipment Decontamination” (SNL/NM January 2012a). Section IV.4.1.2 discusses the QC results for the EB samples.

2.2 **Well Evacuation**

In accordance with procedures described in SNL/NM FOP 05-01, “Groundwater Monitoring Well Sampling and Field Analytical Measurements” (SNL/NM January 2012b), all wells were purged a minimum of one saturated casing volume (the volume of one length of the saturated screen plus the borehole annulus around the saturated screen interval) and monitored for stability of water quality parameters, if applicable.

Field water-quality measurements for turbidity, pH, temperature, specific conductance (SC), oxidation-reduction potential (ORP), and dissolved oxygen (DO) were obtained from the wells prior to collecting groundwater samples. Groundwater temperature, SC, ORP, DO, and pH were measured with a YSI™ Model 6920 water quality meter. Turbidity was measured with a HACH™ Model 2100P turbidity meter. Purging continued until four stable measurements for turbidity, pH, temperature, and SC were obtained. Groundwater stability is considered acceptable when the following parameters are achieved:

- Turbidity measurements are within 10%, or less than 5 nephelometric turbidity units
- pH is within 0.1 units
- Temperature is within 1.0 degree Celsius
- SC is within 5% as micromhos per centimeter

Table IV-3 summarizes the temperature, pH, SC, and turbidity measurements, which are discussed in Section IV.3.1. Field Measurement Logs (Appendix A) documenting details of well purging and water quality measurements have been submitted to the SNL/NM Records Center.

2.3 **Groundwater Sample Collection**

All groundwater samples were collected directly from the sample discharge tubing into laboratory-prepared sample containers. Chemical preservatives for samples intended for chemical analyses were added to the sample containers at the laboratory prior to shipment to SNL/NM. The groundwater samples were submitted to GEL Laboratories LLC (GEL) for chemical analysis using methods outlined in Table IV-1. Table IV-1 also lists the sample containers and preservation requirements. Section IV.3.0 summarizes the analytical results.

The sample identification number, Analysis Request/Chain-of-Custody form number, and the associated groundwater investigation are provided in Table IV-2. Chain-of-custody forms are included in Appendix B.

3.0 **Analytical Results**

Groundwater samples were submitted to GEL for chemical and radiological analyses. Samples were analyzed in accordance with applicable EPA analytical methods (EPA 1980, 1984, 1986, and 1999; Clesceri, et al. 1998; DOE 1990). Table IV-4 lists the MDLs

for VOCs and SVOCs analyzed and Table IV-5 lists the MDLs for HE compounds analyzed. Groundwater sampling results are compared with established EPA MCLs for drinking water (EPA 2009). Analytical results for samples collected from all five monitoring wells are shown in tabulated form in Tables IV-6 through IV-13. Analytical reports, including certificates of analyses, analytical methods, MDLs, minimum detectable activity (MDA), critical level, practical quantitation limits, dates of analyses, results of QC analyses, and data validation findings are filed in the SNL/NM Records Center.

The analytical data were reviewed and qualified in accordance with AOP 00-03, "Data Validation Procedure for Chemical and Radiochemical Data," Revision 3 (SNL/NM May 2011). No problems were identified with the analytical data that resulted in qualification of the data as unusable. The data are acceptable, and reported QC measures are adequate. The data validation sample findings summary sheets are provided as Appendix C.

3.1 **Field Water Quality Measurements**

SWMUs 8/58, CCBA-MW1 and CCBA-MW2. Table IV-3 summarizes field water quality measurements (turbidity, pH, temperature, SC, ORP, and DO) collected prior to sampling.

SWMU 68, OBS-MW1, OBS-MW2, and OBS-MW3. Table IV-3 summarizes field water quality measurements (turbidity, pH, temperature, SC, ORP, and DO) collected prior to sampling.

3.2 **Volatile Organic Compounds**

SWMUs 8/58, CCBA-MW1 and CCBA-MW2. No VOCs were detected above laboratory MDLs in any groundwater sample from SWMUs 8/58. Table IV-4 lists MDLs for associated VOCs analyzed.

SWMU 68, OBS-MW1, OBS-MW2, and OBS-MW3. No VOCs were detected above laboratory MDLs in any groundwater sample from SWMU 68. Table IV-4 lists MDLs for associated VOCs analyzed.

3.3 Semivolatile Organic Compounds

SWMUs 8/58, CCBA-MW1 and CCBA-MW2. No SVOCs were detected above laboratory MDLs in any groundwater sample from SWMUs 8/58. Table IV-4 lists MDLs for associated SVOCs analyzed.

SWMU 68, OBS-MW1, OBS-MW2, and OBS-MW3. No SVOCs were detected above laboratory MDLs in any groundwater sample from SWMU 68. Table IV-4 lists MDLs for associated SVOCs analyzed.

3.4 High Explosive Compounds

SWMUs 8/58, CCBA-MW1 and CCBA-MW2. No HE compounds were detected above laboratory MDLs in any groundwater sample from SWMUs 8/58. Table IV-5 lists MDLs for associated HE compounds analyzed.

SWMU 68, OBS-MW1, OBS-MW2, and OBS-MW3. No HE compounds were detected above laboratory MDLs in any groundwater sample from SWMU 68. Table IV-5 lists MDLs for associated HE compounds analyzed.

3.5 Nitrate Plus Nitrite

SWMUs 8/58, CCBA-MW1 and CCBA-MW2. Table IV-6 summarizes NPN results. NPN values were compared with the nitrate MCL of 10 mg/L. NPN was not detected above the MCL in any groundwater sample. NPN was reported at a maximum concentration of 3.72 mg/L in the CCBA-MW2 environmental sample.

SWMU 68, OBS-MW1, OBS-MW2, and OBS-MW3. Table IV-6 summarizes NPN results. NPN values were compared with the nitrate MCL of 10 mg/L. NPN was not detected above the MCL in any groundwater sample. NPN was reported at a maximum concentration of 1.85 mg/L in the OBS-MW1 duplicate environmental sample.

3.6 Anions and Alkalinity

SWMUs 8/58, CCBA-MW1 and CCBA-MW2. Table IV-7 summarizes alkalinity, major anion (as bromide, chloride, fluoride, and sulfate), and total cyanide results. Fluoride was detected above the established MCL of 4.0 mg/L in the sample from CCBA-MW1 at a concentration of 4.93 mg/L. This detection is most likely attributable to the mineralization of the Precambrian bedrock in which the well is completed and not associated with SNL/NM testing activities. Fluoride was reported in both the

CCBA-MW2 environmental and duplicate environmental samples at a concentration of 1.54 mg/L, which is below the MCL. No other anions or total cyanide were detected above established MCLs. Total cyanide was reported below the MCL of 0.200 mg/L in the CCBA-MW2 duplicate environmental sample. This value was qualified as an estimated value during data validation due to negative values associated with laboratory calibration blank samples. Total cyanide was not detected above the laboratory MDL in the CCBA-MW1 or CCBA-MW2 environmental samples. There are no established MCLs for bromide, chloride, sulfate, or alkalinity.

SWMU 68, OBS-MW1, OBS-MW2, and OBS-MW3. Table IV-7 summarizes alkalinity, major anion (as bromide, chloride, fluoride, and sulfate) and total cyanide results. No parameters were detected above established MCLs in groundwater samples from the SWMU 68 monitoring wells.

3.7 **Perchlorate**

SWMUs 8/58, CCBA-MW1 and CCBA-MW2. Perchlorate was not detected above the NMED-specified screening level/MDL of 4 micrograms per liter ($\mu\text{g/L}$) (0.004 mg/L) in any groundwater sample from SWMUs 8/58. Table IV-8 presents perchlorate results.

SWMU 68, OBS-MW1, OBS-MW2, and OBS-MW3. Perchlorate was not detected above the NMED-specified screening level/MDL of 4 $\mu\text{g/L}$ (0.004 mg/L) in any groundwater sample from SWMU 68. Table IV-8 presents perchlorate results.

Perchlorate results are discussed in more detail in Section II of this ER Quarterly Report.

3.8 **Hexavalent Chromium**

SWMUs 8/58, CCBA-MW1 and CCBA-MW2. Analysis of hexavalent chromium is not required for SWMUs 8/58.

SWMU 68, OBS-MW1, OBS-MW2, and OBS-MW3. Hexavalent chromium results for SWMU 68 are summarized in Table IV-9. No hexavalent chromium was detected above laboratory MDLs. No MCL is established for this analyte.

3.9 **Metals**

SWMUs 8/58, CCBA-MW1 and CCBA-MW2. TAL metals plus uranium were analyzed in samples from both monitoring wells at SWMUs 8/58. Metal results for

SWMUs 8/58 are summarized in Table IV-10. No metal parameters were detected above established MCLs in any groundwater sample.

SWMU 68, OBS-MW1, OBS-MW2, and OBS-MW3. TAL metals plus uranium were analyzed in samples from all SWMU 68 monitoring wells. No metal parameters were detected above established MCLs in any groundwater sample. Metal results for SWMU 68 are summarized on Table IV-11.

3.10 Cations

SWMUs 8/58, CCBA-MW1 and CCBA-MW2. Filtered fractions for major cations as calcium, magnesium, potassium, and sodium were analyzed in all groundwater samples from SWMUs 8/58. There are no established MCLs for these analytical parameters. The results are presented in Table IV-12.

SWMU 68, OBS-MW1, OBS-MW2, and OBS-MW3. Filtered fractions for major cations as calcium, magnesium, potassium, and sodium were analyzed in all SWMU 68 groundwater samples. There are no established MCLs for these analytical parameters. The results are presented in Table IV-12.

3.11 Gamma Spectroscopy and Radioisotopic Analyses

All groundwater samples collected from SWMUs 8/58 and 68 were screened for gamma-emitting radionuclides and gross alpha/beta activity (EPA 1980 and DOE 1990). Additional samples for isotopic uranium were collected to support evaluation of gross alpha activity results. The results for gamma spectroscopy, gross alpha/beta activity, and isotopic uranium are presented in Table IV-13.

Radioisotopic analyses included gross alpha, gross beta, and isotopic uranium analyses. Gross alpha activity is measured as a screening tool and, according to Title 40, Code of Federal Regulations, Parts 9, 141, and 142, Table I-4, does not include uranium, which is measured independently. Therefore, gross alpha activity measurements were corrected by subtracting out the uranium activity.

SWMUs 8/58, CCBA-MW1 and CCBA-MW2. Gamma spectroscopy activity results for short-list radionuclides are less than the associated MDAs for all groundwater samples. The result for potassium-40 activity was qualified as unusable during data validation in the CCBA-MW1 and CCBA-MW2 environmental samples because the laboratory was unable to meet peak identification criteria.

The corrected gross alpha activity was reported below the MCL of 15 picocuries per liter (pCi/L) in all samples. Gross beta activity results do not exceed established MCLs. Isotopic uranium activities range from 0.0382 ± 0.0358 pCi/L for uranium-235/236 to 7.15 ± 0.906 pCi/L for uranium-233/234.

SWMU 68, OBS-MW1, OBS-MW2, and OBS-MW3. Gamma spectroscopy activity results for short-list radionuclides are less than the associated MDAs, except for potassium-40. The results for potassium-40 activity in the OBS-MW1 duplicate environmental sample and the OBS-MW2 environmental sample were qualified as unusable during data validation as the laboratory could not meet identification criteria.

The corrected gross alpha activity reported is below the MCL of 15 pCi/L in all samples. Gross beta activity results do not exceed established MCLs. Isotopic uranium activities range from 0.197 ± 0.0604 pCi/L for uranium-235/236 to 20.6 ± 2.66 pCi/L for uranium-233/234. In this region, groundwater contacts bedrock, which contains material high in naturally occurring uranium.

3.12 **Sample Results Exceeding Maximum Contaminant Levels**

Table IV-14 lists the results for all constituents that have been detected at concentrations exceeding the EPA MCLs (EPA 2009) during the quarterly sampling events at SWMUs 8/58 and 68. The only constituent exceeding the MCL in samples collected during this quarter consists of fluoride, which was detected in the CCBA-MW1 environmental sample from SWMUs 8/58. This detection is most likely attributable to the mineralization of the Precambrian bedrock in which the well is completed and not associated with SNL/NM testing activities.

4.0 **Quality Control Samples**

Field and laboratory QC samples are prepared to determine the accuracy of the methods used and to detect inadvertent sample contamination that may have occurred during the sampling and analysis process. The following sections discuss each sample type.

4.1 **Field Quality Control Samples**

Field QC samples for this sampling event included duplicate environmental, EB, TB, and FB samples. The field QC samples were submitted for analysis along with the

groundwater samples in accordance with QC procedures specified in the Groundwater Characterization Work Plans for SWMUs 8/58 and 68 (SNL/NM September 2010).

4.1.1 **Duplicate Environmental Samples**

Duplicate environmental samples were collected from CCBA-MW2 and OBS-MW1 and analyzed to estimate the overall reproducibility of the sampling and analytical process. The duplicate environmental samples were collected immediately after the original environmental sample to reduce variability caused by time and/or sampling mechanics. Duplicate environmental samples were analyzed for all parameters.

Table IV-15 summarizes the results for duplicate sample analyses and calculated relative percent difference (RPD) values for CCBA-MW2 and OBS-MW1. RPD values were calculated only for detected parameters. The Work Plans for SWMUs 8/58 and 68 do not specify QC acceptance criteria for duplicate environmental sample data; however, duplicate sample results show good correlation (RPD values of less than 20 for organic compounds and less than 35 for inorganic analytes) for all calculated parameters.

4.1.2 **Equipment Blank Samples**

A portable Bennett[™] groundwater sampling system was used to collect groundwater samples from all wells. The sampling pump and tubing bundle were decontaminated prior to installation into monitoring wells according to procedures described in SNL/NM FOP 05-03 “Groundwater Monitoring Equipment Decontamination,” (SNL/NM January 2012a). In accordance with SNL/NM FOP 05-03, the following solutions were pumped through the sampling system: 5 gallons of deionized (DI) water mixed with 20 milliliters (mL) nonphosphate laboratory detergent; 5 gallons of DI water; 5 gallons of DI water mixed with 20 mL reagent-grade nitric acid; and 15 gallons of DI water. In addition, the outside of the pump tubing was rinsed with DI water. EB samples are collected to verify the effectiveness of the equipment decontamination process. EB samples were collected prior to sampling monitoring wells CCBA-MW2 and OBS-MW1 and were submitted for all analyses.

SWMUs 8/58, CCBA-MW2. Bicarbonate alkalinity, bromodichloromethane, chloroform, chloride, copper, dibromochloromethane, and sodium were detected above the laboratory MDLs. Copper was detected in the CCBA-MW2 samples at concentrations less than five times the associated EB result, and the results was qualified as not detected during data validation. No corrective action was necessary for bicarbonate alkalinity, bromodichloromethane, chloroform, chloride, dibromochloromethane, or sodium as these

analytes were either not detected in environmental samples or detected at concentrations greater than five times the blank result.

SWMU 68, OBS-MW1. Antimony, bromodichloromethane, chloroform, copper, dibromochloromethane, and chloride were detected above laboratory MDLs. No corrective action was necessary for bromodichloromethane, chloroform, dibromochloromethane, or chloride as these analytes were either not detected in environmental samples or detected at concentrations greater than five times the blank result. Antimony in the OBS-MW1 duplicate environmental sample and copper in both OBS-MW1 environmental samples were detected at concentrations less than five times the associated EB result, and the results were qualified as not detected during data validation.

4.1.3 Trip Blank Samples

TB samples are submitted whenever samples are collected for VOC analyses to assess whether contamination of the samples has occurred during shipment and storage. TB samples consist of laboratory reagent-grade water with hydrochloric acid preservative contained in 40-mL volatile organic analysis vials prepared by the analytical laboratory, which accompany the empty sample containers supplied by the laboratory. TBs were brought to the field and accompanied each sample shipment.

SWMUs 8/58. A total of three TB samples were submitted with the samples collected during the April 2012 sampling event. No VOCs were detected above associated laboratory MDLs.

SWMU 68. A total of four TB samples were submitted with the samples collected during the April 2012 sampling event. No VOCs were detected above associated laboratory MDLs.

4.1.4 Field Blank Samples

FB samples were collected for VOC analysis to assess whether contamination of the samples resulted from ambient field conditions. FB samples are prepared by pouring DI water into sample containers at the sampling point (CCBA-MW2 and OBS-MW3) to simulate the transfer of environmental samples from the sampling system to the sample container.

SWMUs 8/58, CCBA-MW1. The VOC compounds bromodichloromethane, chloroform, and dibromochloromethane were detected above associated laboratory MDLs. No corrective action was required as these compounds were not detected in the associated environmental sample.

SWMU 68, OBS-MW2. The VOC compounds bromodichloromethane, chloroform, and dibromochloromethane were detected above the laboratory MDLs. No corrective action was necessary as these compounds were not detected in the associated environmental samples.

4.2 **Laboratory Quality Control Samples**

Internal laboratory QC samples, including method blanks and duplicate laboratory control samples, were analyzed concurrently with all groundwater samples. All chemical data were reviewed and qualified in accordance with AOP 00-03, "Data Validation Procedure for Chemical and Radiochemical Data" (SNL/NM May 2011).

Some analytical results were qualified during the data validation process and the results for potassium-40 activity in the CCBA-MW1 and CCBA-MW2 environmental samples, the OBS-MW1 duplicate environmental sample, and the OBS-MW2 environmental sample were qualified as unusable. No other significant data quality problems were noted. The data validation sample findings summary sheets are provided in Appendix C.

4.3 **Variations and Nonconformances**

No variations or nonconformances from requirements in the Groundwater Characterization Work Plans for SWMUs 8/58 and 68 (SNL/NM September 2010) occurred during the April 2012 sampling activities.

5.0 **Summary**

During the Second Quarter of CY 2012, samples were collected from monitoring wells CCBA-MW1 and CCBA-MW2, located within SWMUs 8/58; and OBS-MW1, OBS-MW2, and OBS-MW3, located within SWMU 68. Sampling results were compared with EPA MCL guidelines for drinking water (EPA 2009).

Analytical parameters for CCBA-MW1 and CCBA-MW2 consist of VOCs, SVOCs, HE compounds, NPN, major anions, major cations, alkalinity, TAL metals plus uranium,

perchlorate, total cyanide, radionuclides by gamma spectroscopy, gross alpha/beta activity, and isotopic uranium. No parameters were detected above established MCLs, except for fluoride. Fluoride was detected above the established MCL of 4.0 mg/L in the CCBA-MW1 environmental sample at a concentration of 4.93 mg/L. This detection is most likely attributable to the mineralization of the Precambrian bedrock in which the well is completed and not associated with SNL/NM testing activities.

Analytical parameters for OBS-MW1, OBS-MW2, and OBS-MW3 consist of VOCs, SVOCs, HE compounds, NPN, major anions, major cations, alkalinity, TAL metals plus uranium, hexavalent chromium, perchlorate, total cyanide, radionuclides by gamma spectroscopy, gross alpha/beta activity, and isotopic uranium. No parameters were detected above established MCLs in groundwater samples collected from SWMU 68 monitoring wells.

Table IV-2

**Sample Details for Second Quarter, CY 2012 Groundwater Sampling
Solid Waste Management Units 8/58 and 68 Groundwater Monitoring Quarterly Assessment
April – June 2012**

| Well | Sample Identification | AR/COC Number | Associated Groundwater Investigation |
|----------------|------------------------------|----------------------|---|
| CCBA-MW1 | 092291 | 614155 | SWMUs 8/58 |
| CCBA-MW2 | 092296 | 614157 | |
| CCBA-MW2 (dup) | 092297 | | |
| OBS-MW1 | 092022 | 614081 | SWMU 68 |
| OBS-MW1 (dup) | 092023 | | |
| OBS-MW2 | 092025 | 614082 | |
| OBS-MW3 | 092018 | 614079 | |

Notes

AR/COC = Analysis Request/Chain of Custody.
CCBA = Coyote Canyon Blast Area.
CY = Calendar Year.
dup = Duplicate environmental sample.
MW = Monitoring well.
OBS = Old Burn Site.
SWMU = Solid Waste Management Unit.

Table IV-3
Summary of Field Water Quality Measurements^a
Solid Waste Management Units 8/58 and 68 Groundwater Monitoring
Quarterly Assessment, April – June 2012

| Well ID | Sample Date | Temperature (°C) | Specific Conductivity (µmhos/cm) | Oxidation Reduction Potential (mV) | pH | Turbidity (NTU) | Dissolved Oxygen (% Sat) | Dissolved Oxygen (mg/L) |
|-------------------|-------------|------------------|----------------------------------|------------------------------------|------|-----------------|--------------------------|-------------------------|
| SWMUs 8/58 | | | | | | | | |
| CCBA-MW1 | 23-Apr-12 | 16.51 | 509 | 112.5 | 6.96 | 0.40 | 28.8 | 2.80 |
| CCBA-MW2 | 24-Apr-12 | 18.90 | 610 | 102.0 | 7.87 | 0.48 | 63.5 | 5.86 |
| SWMU 68 | | | | | | | | |
| OBS-MW1 | 18-Apr-12 | 17.70 | 531 | 99.5 | 7.75 | 0.47 | 39.0 | 3.71 |
| OBS-MW2 | 19-Apr-12 | 17.54 | 531 | 100.7 | 7.73 | 0.46 | 39.2 | 3.74 |
| OBS-MW3 | 17-Apr-12 | 16.39 | 531 | 30.6 | 7.74 | 0.52 | 43.4 | 4.24 |

Notes

^aField measurements collected prior to sampling.

°C = Degrees Celsius.

% Sat = Percent saturation.

µmhos/cm = Micromhos per centimeter.

CCBA = Coyote Canyon Blast Area.

ID = Identification.

mg/L = Milligrams per liter.

mV = Millivolts.

MW = Monitoring well.

NTU = Nephelometric turbidity units.

OBS = Old Burn Site.

pH = Potential of hydrogen (negative logarithm of the hydrogen ion concentration).

SWMU = Solid Waste Management Unit.

| Tetryl | 0.0833 – 0.0899 | 0.0833 – 0.0894 |

Notes

µg/L = Micrograms per liter.
EPA = U.S. Environmental Protection Agency.
HMX = Tetrahexamine tetranitramine.
MDL = Method detection limit. The minimum concentration that can be measured and reported with 99% confidence that the analyte is greater than zero; analyte is matrix-specific.
PETN = Pentaerythritol tetranitrate.
RDX = Hexahydro-trinitro-triazine.
SWMU = Solid Waste Management Unit.
Tetryl = 2,4,6-trinitrophenylmethyl nitramine.

Notes

CCBA = Coyote Canyon Blast Area.

CFR = Code of Federal Regulations.

EPA = U.S. Environmental Protection Agency.

ID = Identification.

MCL = Maximum contaminant level. Established by the EPA Primary Water Regulations (40 CFR 141.11, Subpart B), National Primary Drinking Water Standards (EPA, 2009).

MDL = Method detection limit. The minimum concentration that can be measured and reported with 99% confidence that the analyte is greater than zero; analyte is matrix-specific.

mg/L = Milligrams per liter.

MW = Monitoring well.

N = Nitrogen.

OBS = Old Burn Site.

PQL = Practical quantitation limit. The lowest concentration of analytes in a sample that can be reliably determined within specified limits of precision and accuracy by that indicated method under routine laboratory operating conditions.

SWMU = Solid Waste Management Unit.

Table IV-7 (Concluded)
Summary of Alkalinity, Anion, and Total Cyanide Results
Solid Waste Management Units 8/58 and 68 Groundwater Monitoring
Quarterly Assessment, April – June 2012

Notes

| | |
|------|--|
| CCBA | = Coyote Canyon Blast Area. |
| CFR | = Code of Federal Regulations. |
| EPA | = U.S. Environmental Protection Agency. |
| ID | = Identification. |
| MCL | = Maximum contaminant level. Established by the EPA Primary Water Regulations (40 CFR 141.11, Subpart B), National Primary Drinking Water Standards (EPA, 2009). |
| MDL | = Method detection limit. The minimum concentration that can be measured and reported with 99% confidence that the analyte is greater than zero; analyte is matrix-specific. |
| mg/L | = Milligrams per liter. |
| MW | = Monitoring well. |
| ND | = Not detected (at MDL). |
| NE | = Not established. |
| OBS | = Old Burn Site. |
| PQL | = Practical quantitation limit. The lowest concentration of analytes in a sample that can be reliably determined within specified limits of precision and accuracy by that indicated method under routine laboratory operating conditions. |
| SM | = Standard Method. |
| SW | = Solid Waste. |
| SWMU | = Solid Waste Management Unit. |

^aLaboratory Qualifier

| | |
|---|--|
| J | = Estimated value, the analyte concentration fell above the effective MDL and below the effective PQL. |
| U | = Analyte is absent or below the method detection limit. |

^bValidation Qualifier

If cell is blank, then all quality control samples met acceptance criteria with respect to submitted samples.

| | |
|-----|--|
| NJ- | = Presumptive evidence of the presence of the material at an estimated quantity with a suspected negative bias. |
| UJ | = The analyte was analyzed for but was not detected. The associated value is an estimate and may be inaccurate or imprecise. |

^cAnalytical Method

U.S. Environmental Protection Agency, 1986 (and updates), "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods," SW-846, 3rd ed.

Table IV-10 (Concluded)
Summary of Unfiltered Total Metal Results
Solid Waste Management Units 8/58 Groundwater Monitoring
Quarterly Assessment, April – June 2012

Notes

| | |
|------|--|
| CCBA | = Coyote Canyon Blast Area. |
| CFR | = Code of Federal Regulations. |
| EPA | = U.S. Environmental Protection Agency. |
| ID | = Identification. |
| MCL | = Maximum contaminant level. Established by the EPA Primary Water Regulations (40 CFR 141.11, Subpart B), National Primary Drinking Water Standards (EPA, 2009). |
| MDL | = Method detection limit. The minimum concentration that can be measured and reported with 99% confidence that the analyte is greater than zero; analyte is matrix-specific. |
| mg/L | = Milligrams per liter. |
| MW | = Monitoring well. |
| ND | = Not detected (at MDL). |
| NE | = Not established. |
| PQL | = Practical quantitation limit. The lowest concentration of analytes in a sample that can be reliably determined within specified limits of precision and accuracy by that indicated method under routine laboratory operating conditions. |

^aLaboratory Qualifier

| | |
|---|--|
| B | = The analyte was detected in the blank above the effective method detection limit (MDL). |
| J | = Estimated value, the analyte concentration fell above the effective MDL and below the effective PQL. |
| U | = Analyte is absent or below the method detection limit. |

^bValidation Qualifier

If cell is blank, then all quality control samples met acceptance criteria with respect to submitted samples.

| | |
|----|--|
| J | = The associated value is an estimated quantity. |
| U | = The analyte was analyzed for but was not detected. The associated numerical value is the sample quantitation limit. |
| UJ | = The analyte was analyzed for but was not detected. The associated value is an estimate and may be inaccurate or imprecise. |

^cAnalytical Method

U.S. Environmental Protection Agency, 1986 (and updates), *“Test Methods for Evaluating Solid Waste, Physical/Chemical Methods,”* SW-846, 3rd ed.

Table IV-11 (Concluded)
Summary of Unfiltered Total Metal Results
Solid Waste Management Unit 68 Groundwater Monitoring
Quarterly Assessment, April – June 2012

Notes

CFR = Code of Federal Regulations.
EPA = U.S. Environmental Protection Agency.
ID = Identification.
MCL = Maximum contaminant level. Established by the EPA Primary Water Regulations (40 CFR 141.11, Subpart B), National Primary Drinking Water Standards (EPA, 2009).
MDL = Method detection limit. The minimum concentration that can be measured and reported with 99% confidence that the analyte is greater than zero; analyte is matrix-specific.
mg/L = Milligrams per liter.
MW = Monitoring well.
ND = Not detected (at MDL).
NE = Not established.
OBS = Old Burn Site.
PQL = Practical quantitation limit. The lowest concentration of analytes in a sample that can be reliably determined within specified limits of precision and accuracy by that indicated method under routine laboratory operating conditions.

^aLaboratory Qualifier

B = The analyte was detected in the blank above the effective method detection limit (MDL).
J = Estimated value, the analyte concentration fell above the effective MDL and below the effective PQL.
U = Analyte is absent or below the method detection limit.

^bValidation Qualifier

If cell is blank, then all quality control samples met acceptance criteria with respect to submitted samples.

J = The associated value is an estimated quantity.
U = The analyte was analyzed for but was not detected. The associated numerical value is the sample quantitation limit.
UJ = The analyte was analyzed for but was not detected. The associated value is an estimate and may be inaccurate or imprecise.

^cAnalytical Method

U.S. Environmental Protection Agency, 1986 (and updates), *“Test Methods for Evaluating Solid Waste, Physical/Chemical Methods,”* SW-846, 3rd ed.

Notes

- CCBA = Coyote Canyon Blast Area.
- CFR = Code of Federal Regulations.
- EPA = U.S. Environmental Protection Agency.
- HASL = Health and Safety Laboratory.
- MCL = Maximum contaminant level. The following are the MCLs for gross alpha particles and beta particles in community water systems:
15 pCi/L = Gross alpha particle activity, excluding total uranium (40 CFR Parts 9, 141, and 142, Table I-4)
4 mrem/yr = any combination of beta and/or gamma emitting radionuclides (as dose rate).
- MDA = The minimal detectable activity or minimum measured activity in a sample required to ensure a 95% probability that the measured activity is accurately quantified above the critical level.
- mrem/yr = Millirem per year.
- MW = Monitoring well.
- NA = Not applicable for gross alpha activities. The MDA or critical level could not be calculated as the gross alpha activity was corrected by subtracting out the total uranium activity.
- NE = Not established.
- OBS = Old Burn Site.
- pCi/L = Picocuries per liter.
- SWMU = Solid Waste Management Unit.

^aActivities of zero or less are considered to be not detected. Gross alpha activity measurements were corrected by subtracting out the total uranium activity (40 CFR Parts 9, 141, and 142, Table I-4).

^bThe lowest concentration of analytes in a sample that can be reliably determined within specified limits of precision and accuracy by that indicated method under routine laboratory operating conditions. The minimum activity that can be measured and reported with 99% confidence that the analyte is greater than zero; analyte is matrix-specific.

Table IV-13 (Concluded)
Summary of Gamma Spectroscopy, Gross Alpha, Gross Beta, and Isotopic Uranium Results
Solid Waste Management Units 8/58 and 68 Groundwater Monitoring
Quarterly Assessment, April – June 2012

Notes (continued)

^cLaboratory Qualifier

- NA = Not applicable.
- U = Analyte is absent or below the method detection limit.
- X = Data rejected due to peak not meeting identification criteria.

^dValidation Qualifier

If cell is blank, then all quality control samples met acceptance criteria with respect to submitted samples.

- BD = Below detection limit as used in radiochemistry to identify results that are not statistically different from zero.
- J = The associated value is an estimated quantity.
- R = The data are unusable, and resampling or reanalysis are necessary for verification.
- None = No data validation for corrected gross alpha activity.

^eAnalytical Method

U.S. Environmental Protection Agency, 1980, "*Prescribed Procedures for Measurement of Radioactivity in Drinking Water*," EPA-600/4-80-032, U.S. Environmental Protection Agency, Cincinnati, Ohio
U.S. Department of Energy, 1990, "*EML Procedures Manual*," 27th ed., Vol. 1, Rev. 1992, Environmental Measurements Laboratory HASL-300.

| CCBA-MW1 | 23-Apr-12 | Fluoride | 4.93 mg/L | 4.0 mg/L | | | 092291-016 | SW846 9056 |

Notes

CCBA = Coyote Canyon Blast Area.
CFR = Code of Federal Regulations.
EPA = U.S. Environmental Protection Agency.
ID = Identification.
MCL = Maximum contaminant level. Established by the EPA Primary Water Regulations (40 CFR 141.11, Subpart B), National Primary Drinking Water Standards (EPA, 2009).
mg/L = Milligrams per liter.
MW = Monitoring well.
SWMU = Solid Waste Management Unit.

^a**Laboratory Qualifier**

^b**Validation Qualifier**

If cell is blank, then all quality control samples met acceptance criteria with respect to submitted samples.

^c**Analytical Method**

U.S. Environmental Protection Agency, 1986 (and updates), "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods," SW-846, 3rd ed.

Notes

CCBA = Coyote Canyon Blast Area.
 ID = Identification.
 mg/L = Milligrams per liter.
 MW = Monitoring well.
 NC = Not calculated.
 OBS = Old Burn Site.
 pCi/L = Picocuries per liter.

^aRPD

RPD = Relative percent difference is calculated with the following equation and rounded to nearest whole number.

$$RPD = \frac{|R_1 - R_2|}{[(R_1 + R_2) / 2]} \times 100$$

where: R₁ = analysis result
 R₂ = duplicate analysis result

Memorandum

Date: June 23, 2012
To: File
From: Marcia Hilchey
Subject: Inorganic Data Review and Validation – SNL
Site: SWMU 8/58 GWM
AR/COC: 614155, -156, -157
SDG: 303091
Laboratory: GEL
Project/Task: 98026.01.12
Analysis: General Chemistry

See the attached Data Validation Worksheets for supporting documentation on the data review and validation. This validation was performed according to SNL/NM ER Project AOP 00-03 Rev 3.

Summary

Four samples were prepared and analyzed with accepted procedures using methods EPA 9056 (anions by ion chromatography); EPA 9012A (total cyanide); EPA 314.0 (perchlorate by IC); SM 2320B (alkalinity); and EPA 353.2 (nitrate/nitrite by Cd reduction). Data were reported for all required analytes. Problems were identified with the data package that results in the qualification of data.

Anions:

The ICAL intercept for chloride was positive and > the MDL. The associated result for sample 303091-018 was a detect < 3X the intercept value and will be **qualified J+, I5**.

Total cyanide:

The ICAL intercept for total cyanide was negative, with an absolute value > MDL but $\leq 2X$ the PQL. Also, total cyanide was detected in ICB and CCB at a negative value with absolute value > MDL. The total cyanide result for sample -048 was a detect < 5X the MDL and < 3X the absolute value of the intercept and will be **qualified NJ-, I5, B4**. The total cyanide results for samples -009, -023, and -036 were ND and will be **qualified UJ, I5, B4**.

Data are acceptable and reported QC measures appear to be adequate. The following sections discuss the data review and validation.

Holding Times and Preservation

The samples were prepared and analyzed within the prescribed holding times and properly preserved.

Calibration

All initial and continuing calibration met QC acceptance criteria except as noted above in the Summary section and as follows.

Anions:

The ICAL intercepts for fluoride and chloride were positive and > the MDL. Associated sample results that are ND or > 3X the intercept value will not be qualified.

Blanks

No target analytes were detected in the blanks except as noted above in the Summary section and as follows.

Anions:

Chloride was detected in the EB. Associated sample results were > 5X the EB concentration and will not be qualified.

Laboratory Control Sample (LCS)/Laboratory Control Sample Duplicate (LCSD)

All LCS/LCSD acceptance criteria were met.

Matrix Spike (MS)

All MS/PS recoveries met QC acceptance criteria.

Laboratory Replicate

The replicate analyses met all QC acceptance criteria.

Detection Limits/Dilutions

All detection limits were properly reported. No samples were diluted except as follows.

Nitrate/Nitrite:

Samples -005, -032, and -044 were diluted 10X, and sample -019 was diluted 5X.

Anions:

Sample -004 was diluted 5X for chloride and sulfate; samples -031 and -043 were diluted 10X for chloride and sulfate.

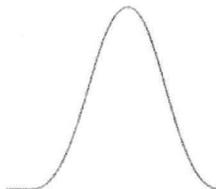

All associated batch QC samples were analyzed at dilution factors that resulted in relative dilution factors to the sample that were $\leq 5X$. No sample data will be qualified as a result.

Other QC

EBs and field duplicates were submitted on the AR/COC(s). There are no "required" review criteria for field duplicate analyses comparability; no data will be qualified as a result. No other specific issues that affect data quality were identified.

Memorandum

Date: June 22, 2012
To: File
From: Marcia Hilchey
Subject: LC/MS/MS Organic Data Review and Validation – SNL
Site: SWMU 8/58 GWM
AR/COC: 614155, -156, -157
SDG: 303091
Laboratory: GEL
Project/Task: 98026.01.12
Analysis: High Explosives (HE) by LCMSMS

See the attached Data Validation Worksheets for supporting documentation on the data review and validation. Data are evaluated using SNL/NM SMO AOP 00-03 Rev 3.

Summary

Four samples were prepared and analyzed with accepted procedures using method EPA 8321A Mod (HE by LCMSMS). All compounds were successfully analyzed. Problems were identified with the data package that result in the qualification of data.

- 1) M-nitrotoluene, o-nitrotoluene, and p-nitrotoluene had initial calibration response factors of < 0.05 but > 0.01 . All associated sample results were ND and should be **qualified UJ, I4**.
- 2) LCS recoveries for 4-amino-2,6-dinitrotoluene and 2,6-dinitrotoluene were $<$ the LAL but $> 10\%$. All associated sample results were ND and should be **qualified UJ, L3**.

Data are acceptable and reported QC measures appear to be adequate. The following sections discuss the data review and validation.

Holding Times

The samples were extracted and analyzed within the prescribed holding times and properly preserved.

Calibration

All initial and continuing calibration met QC acceptance criteria except as noted above in the Summary section.

Reporting Limit Verification

All CRI recoveries met QC acceptance criteria.

Blanks

No target analytes were detected in the blanks.

Surrogates

All surrogate recoveries met QC acceptance criteria.

Internal Standards

All internal standards met QC acceptance criteria.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The MS/MSD analyses met QC acceptance criteria.

It should be noted that MS/MSD analyses were performed on an SNL sample from another SDG. No sample data will be qualified as a result.

Laboratory Control Sample (LCS)

All LCS QC acceptance criteria were met except as noted above in the Summary section.

Detection Limits/Dilutions

All detection limits were properly reported. According to laboratory procedure, all sample and QC extracts were diluted 2X with HPLC grade water.

Other QC

An EB and a field duplicate were submitted with the AR/COC(s). There are no "required" review criteria for field duplicate analyses comparability; no data will be qualified as a result. No other specific issues that affect data quality were identified.

Analysis: Metals

See the attached Data Validation Worksheets for supporting documentation on the data review and validation. This validation was performed according to SNL/NM ER Project AOP 00-03 Rev 3.

Summary

Four samples were prepared and analyzed with approved procedures using methods EPA 6020 (ICP-MS metals), EPA 6010B (ICP-AES), and EPA 7470A (CVAA mercury). Four samples were prepared and analyzed with approved procedures using method EPA 6020 (ICP-MS anions). Data were reported for all required analytes. Problems were identified with the data package that resulted in the qualification of data.

ICP-MS SDG 303091:

- 1) TI was detected in the CCBs at < PQL. The associated result for sample 303091 -003 was a detect < 5X the CCB value and will be **qualified “0.0038U, B3”** at 5X the CCB value.
- 2) Ca and Cr were detected in the MB at < PQL. The Ca result for sample -017 was > MDL and < 5X the MB concentration and will be **qualified “0.03695U, B”** at 5X the MB value. The Cr results for samples -003, -017, -030, and -042 were > MDL and < 5X the MB concentration and will be **qualified “0.01885U, B”** at 5X the MB value.
- 3) Cu was detected in the EB associated with samples -030 and -042. Associated sample results were > MDL and < 5X the EB concentration and will be **qualified “0.00555U, B2”** at 5X the EB value.
- 4) The serial dilution %D was > 10% for Ca. The associated results for samples -003, -030, and -042 were detects and will be **qualified “J, D1”**. The associated result for sample -017 was a qualified ND (see item 1 above) and will be **qualified “0.03695UJ, B, D1”**.

ICP-MS SDG 303092:

- 1) Ca was detected in the MB at < PQL. The serial dilution %D was > 10% for Ca. The associated result for sample 303092-002 was a detect < 5X the MB concentration and will be **qualified 0.398UJ, B, D1”**. The

associated results for samples -001, -003, and -004 were detects > 5X the MB concentration and will be qualified "J, D1".

CVAA:

- 1) Hg was detected in CCBs associated with all samples at negative concentrations > MDL and < PQL. The associated sample results were ND and will be qualified "UJ, B4."

Data are acceptable and reported QC measures appear to be adequate. The following sections discuss the data review and validation.

Holding Times and Preservation

The samples were prepared and analyzed within the prescribed holding times and properly preserved.

ICP-MS Instrument Tune

All instrument tune requirements were met.

Calibration

All initial and continuing calibration met QC acceptance criteria.

Reporting Limit Verification

All CRA/CRI recoveries met QC acceptance criteria.

Blanks

No target analytes were detected in the blanks except as noted above in the Summary section and as follows.

ICP-MS:

U and Tl were detected in associated CCBs at <PQL. Ca was detected in the MBs at < PQL. All associated sample results that were ND or > 5X the associated blank concentration will not be qualified.

Ca, Cr, Cu, and Na were detected in one or both EBs associated with field samples in this data package. All associated sample results that were ND or > 5X the associated EB concentration will not be qualified. It should be noted that several results in the EB samples (303091-017 and 303092-002) were qualified U due to MB and CCB contamination and, therefore, will not be applied to associated sample results (see Summary section above).

ICP -MS Internal Standards

All internal standards met QC acceptance criteria.

Matrix Spike (MS)

All MS recoveries met QC acceptance criteria.

Laboratory Replicate

All replicates met QC acceptance criteria.

Laboratory Control Sample (LCS)

All LCS QC acceptance criteria were met.

Detection Limits/Dilutions

All detection limits were properly reported. No samples were diluted except as follows.

ICP-MS:

Samples 303291-003, -030, and -042 and 303092-001, -003, and -004 were diluted 5X for Na.

ICP Interference Check Sample (ICS A and AB)

Results of the ICS A and AB analyses were not evaluated because the concentrations of Al, Ca, Fe, and Mg in the samples were < those in the ICS solutions. No sample data will be qualified as a result.

ICP Serial Dilution

The serial dilution analyses met all QC acceptance criteria except as noted in the Summary section above.

Other QC

EBs and field duplicates were submitted on the AR/COC(s). There are no “required” review criteria for field duplicate analyses comparability; no data will be qualified as a result. No other specific issues that affect data quality were identified.

Memorandum

Date: June 23, 2012
To: File
From: Marcia Hilchey
Subject: Radiochemical Data Review and Validation – SNL
Site: SWMU 8/58 GWM
AR/COC: 614155, -156, -157
SDG: 303091
Laboratory: GEL
Project/Task: 98026.01.12
Analysis: RAD

See the attached Data Validation Worksheets for supporting documentation on the data review and validation. This validation was performed according to SNL/NM ER Project AOP 00-03 Rev 3.

Summary

Four samples were prepared and analyzed with approved procedures using methods EPA 901.1 (gamma spec – short list), EPA 900.0 (gross alpha/beta), and HASL 300, U-02-RC Mod (Alpha Spec U). Problems were identified with the data package that result in the qualification of data.

Gamma Spec, Iso-U; Gross Alpha/Beta:

- 1) All sample results which were either < the associated 2-sigma TPU or < the associated MDA will be **qualified “BD, FR3.”**
- 2) All sample results which were > MDA but <3X the associated MDA will be **qualified “J, FR7.”**

Gamma Spec:

- 1) The K-40 results for samples 303091-010 and -037 were X-flagged by the laboratory due to the peak not meeting identification criteria and will be **qualified “R, Z2.”**
- 2) According to the case narrative, no peaks were identified for Am-241 in sample -049. The associated sample result is considered a ND at the calculated MDA and will be **qualified “BD, Z2.”**

Data are acceptable and reported QC measures appear to be adequate. The following sections discuss the data review and validation.

Holding Times and Preservation

The samples were analyzed within the prescribed holding times and properly preserved.

Quantification

All quantification criteria were met except as noted above in the Summary section.

Calibration

The case narratives stated that the instruments used were properly calibrated.

Blanks

No target analytes were detected in the blanks at concentrations > the MDA and 2-sigma TPU.

Tracer/Carrier Recovery

All tracer/carrier recoveries met QC acceptance criteria.

Matrix Spike (MS)

All MS recoveries met QC acceptance criteria.

Laboratory Replicate

All replicate error ratio acceptance criteria were met except as follows.

Gamma Spec:

The RER for K-40 was > 1 and < 3. The parent sample result was X-qualified by the laboratory, therefore the associated RER was not applied to sample results.

Laboratory Control Sample (LCS)

All LCS recoveries met QC acceptance criteria.

Detection Limits/Dilutions

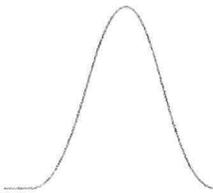

All required detection limits were met. No dilutions were required.

Other QC

EBs and field duplicates were submitted on the AR/COC(s). There are no "required" review criteria for field duplicate analyses comparability; no data will be qualified as a result. No other specific issues that affect data quality were identified.

Project/Task: 98026.01.12
Analysis: SVOCs

See the attached Data Validation Worksheets for supporting documentation on the data review and validation. Data are evaluated using SNL/NM SMO AOP 00-03 Rev 3.

Summary

Four samples were prepared and analyzed with accepted procedures using method EPA 8270C (SVOCs). All compounds were successfully analyzed. No problems were identified with the data package that resulted in the qualification of data.

Data are acceptable and reported QC measures appear to be adequate. The following sections discuss the data review and validation.

Holding Times

The samples were prepared and analyzed within the prescribed holding times and properly preserved.

Instrument Tune

All instrument tune requirements were met.

Calibration

The initial calibration and continuing calibration data met QC acceptance criteria except as follows.

The ICAL intercepts for 2,4-dinitrophenol; p-nitroaniline; and 2-methyl-4,6-dinitrophenol were > the MDL. However, the associated sample results were all NDs and, therefore, will not be qualified.

The CCV %D for bis(2-chloroisopropyl) ether was >20% but <40% with negative bias. The associated sample results were ND, with no other calibration infractions, and should not be qualified.

Blanks

No target analytes were detected in the blanks.

Surrogates

All surrogate recoveries met QC acceptance criteria.

Internal Standards

All internal standards met QC acceptance criteria.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

All MS/MSD acceptance criteria were met.

Laboratory Control Sample (LCS)

All LCS acceptance criteria were met with the following exception. The LCS %R for pyrene was > the UAL. All associated sample results were ND and should not be qualified.

Detection Limits/Dilutions

All detection limits were properly reported. The samples were not diluted.

Tentatively Identified Compounds (TICs)

TIC reports were not required.

Other QC

An EB was submitted on the AR/COC(s). No other specific issues that affect data quality were identified.

Project/Task: 98026.01.12
Analysis: VOCs

See the attached Data Validation Worksheets for supporting documentation on the data review and validation. Data are evaluated using SNL/NM SMO AOP 00-03 Rev 3.

Summary

Eight samples were prepared and analyzed with accepted procedures using method EPA 8260B (VOCs). All compounds were successfully analyzed. No problems were identified with the data package that resulted in the qualification of data.

Data are acceptable and reported QC measures appear to be adequate. The following sections discuss the data review and validation.

Holding Times

The samples were analyzed within the prescribed holding times and properly preserved.

Instrument Tune

All instrument tune requirements were met.

Calibration

The initial calibration and continuing calibration data met QC acceptance criteria except as follows.

The initial calibration RSD for bromoform was > 15% and < 40%. There were no other associated calibration infractions. Associated ND sample results will not be qualified.

The ICV %Ds for chloromethane and bromomethane were > 20% but < 40% with negative bias. The CCV %Ds for carbon disulfide, vinyl acetate, 2-butanone, and 2-hexanone were > 20% but < 40% with positive bias. All associated sample results were ND, with no other associated calibration infractions, and will not be qualified.

Blanks

No target analytes were detected in the blanks except as follows.

Bromodichloromethane, chloroform, and dichloromethane were detected in the FB and EB associated with some samples in this SDG. The associated sample results were ND and should not be qualified.

Surrogates

All surrogate recoveries met QC acceptance criteria.

Internal Standards

All internal standards met QC acceptance criteria.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

All MS/MSD acceptance criteria were met.

It should be noted that MS/MSD analyses were performed on an SNL sample of similar matrix from another SDG. No sample data will be qualified as a result.

Laboratory Control Sample (LCS)

All LCS acceptance criteria were met.

Detection Limits/Dilutions

All detection limits were properly reported. The samples were not diluted.

Tentatively Identified Compounds (TICs)

TIC reports were not required.

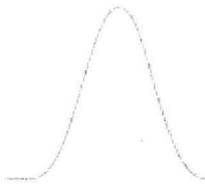

Other QC

TBs, FB, EB, and field duplicates were submitted on the AR/COC(s). There are no "required" review criteria for field duplicate analyses comparability; no data will be qualified as a result.

No other specific issues that affect data quality were identified.

From: Ken Salaz
Subject: Inorganic Data Review and Validation – SNL
Site: SWMU 68 GWM (ER)
AR/COC: 614081
SDG: 302859
Laboratory: GEL
Project/Task: 98026.01.13
Analysis: General Chemistry

See the attached Data Validation Worksheets for supporting documentation on the data review and validation. This validation was performed according to SNL/NM ER Project AOP 00-03 Rev 3.

Summary

Two samples were prepared and analyzed with accepted procedures using methods EPA9012A (Total CN), EPA314.0 (Perchlorate), EPA9056 (Anions), EPA353.2 (nitrate/nitrite as nitrogen), EPA7196A (Cr+6), and SM2320B (Alkalinity). Data were reported for all required analytes. Problems were identified with the data package that result in the qualification of data.

Total CN:

1. The ICAL intercept was negative with an absolute value > the MDL but < 3X the MDL. Also, Total CN was detected in the ICB and CCB at negative concentrations with absolute values > the MDL but < the PQL. The associated sample results were all NDs and, therefore, will be **qualified UJ, I5, B4**.

Data are acceptable, and reported QC measures appear to be adequate. The following sections discuss the data review and validation.

Holding Times and Preservation

The samples were prepared and analyzed within the prescribed holding times and properly preserved.

Calibration

The initial and continuing calibrations met QC acceptance criteria except as noted above in the Summary Section and the following.

Anions:

The ICAL intercepts for fluoride, chloride, and sulfate were > the MDL. However, the associated sample results were all >3X the intercept and, therefore, will not be qualified.

Blanks

No target analytes were detected in any of the blanks except for the following.

Anions:

In EB sample 302788-019 from COC 614080, chloride was detected. However, this sample result was qualified U due to blank contamination and, therefore, will not be applied to sample results.

Laboratory Control Sample (LCS)

All LCS recoveries met QC acceptance criteria.

Matrix Spike (MS)

All MS recoveries met QC acceptance criteria.

Total cyanide, Anions, Perchlorate, & Nitrate/Nitrite as Nitrogen:

It should be noted that the MS analyses were performed on SNL samples of similar matrix from other SDGs. No sample data will be qualified as a result.

Laboratory Replicate

The replicate analyses met all QC acceptance criteria.

Total cyanide, Anions, Perchlorate, Total CN, & Nitrate/Nitrite as Nitrogen:

It should be noted that the Replicate analyses were performed on SNL samples of similar matrix from other SDGs. No sample data will be qualified as a result.

Detection Limits/Dilutions

All detection limits were properly reported. No samples were diluted with the following exceptions.

Anions & Nitrate/Nitrite as Nitrogen:

The samples were diluted 5X for chloride & sulfate and 10X for nitrate/nitrite as nitrogen due to high concentrations. All associated matrix QC samples were analyzed at relative dilution factors $\leq 5X$ those of the samples.

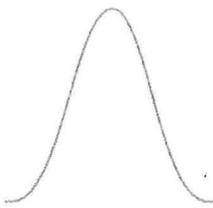

Other QC

A field duplicate pair was submitted on the COC. There are no "required" review criteria for field duplicate analyses comparability. No sample data will be qualified as a result.

No other specific issues that affect data quality were identified.

Analysis: High Explosives (HE)

See the attached Data Validation Worksheets for supporting documentation on the data review and validation. Data are evaluated using SNL/NM SMO AOP 00-03 Rev 3.

Summary

Two samples were prepared and analyzed with accepted procedures using method EPA 8321A Mod (HE by LCMSMS). All compounds were successfully analyzed. Problems were identified with the data package that result in the qualification of data.

1. The ICAL RFs for p-nitrotoluene, o-nitrotoluene, and m-nitrotoluene were <0.05 but >0.01 . The associated sample results were all NDs and, therefore, will be **qualified UJ, I4**.

Data are acceptable, and reported QC measures appear to be adequate. The following sections discuss the data review and validation.

Holding Times

The samples were extracted and analyzed within the prescribed holding times and properly preserved.

Instrument Tune

All instrument tune requirements were met.

Calibration

All initial and continuing calibrations met QC acceptance criteria except as noted above in the Summary section.

Reporting Limit Verification

All CRI recoveries met QC acceptance criteria.

Blanks

No target analytes were detected in any of the blanks.

Surrogates

All surrogate recoveries met QC acceptance criteria.

Internal Standards

The internal standards met all QC acceptance criteria.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The MS/MSD analyses met all QC acceptance criteria. It should be noted that the MS/MSD analyses were performed on an SNL sample of similar matrix from another SDG.

Laboratory Control Sample (LCS)

All LCS recoveries met QC acceptance criteria.

Detection Limits/Dilutions

All detection limits were properly reported. According to laboratory procedure, all sample and QC extracts were diluted 2X with HPLC grade water.

Other QC

One EB, sample 302788-024, was submitted on COC 614080. A field duplicate pair was submitted on the COC. There are no "required" review criteria for field duplicate analyses comparability. No sample data will be qualified as a result.

No other specific issues that affect data quality were identified.

Analysis: Metals

See the attached Data Validation Worksheets for supporting documentation on the data review and validation. This validation was performed according to SNL/NM ER Project AOP 00-03 Rev 3.

Summary

Two samples were prepared and analyzed with approved procedures using methods EPA 6010B (ICP-AES), EPA6020 (ICP-MS), and EPA 7470A (CVAA mercury). Two samples were prepared and analyzed with approved procedures using method EPA 6020 (ICP-MS metals/anions). Data were reported for all required analytes. Problems were identified with the data package that results in the qualification of data.

CVAA:

1. The ICAL intercept for Hg was negative with an absolute value > the MDL but < 3X the MDL. Also, Hg was detected in the ICB and CCB at negative concentrations with absolute values > the MDL but < the PQL. The associated sample results were all NDs and, therefore, will be **qualified UJ, I5, B4**.

ICP-MS:

1. In EB sample 302788-017 from COC 614080, Cu and Sb were detected. All Cu sample results and the Sb result of sample 302859-16 were detects <5X the blank concentration and, therefore, will be **qualified 0.0065U, B2 and 0.0064U, B2**, respectively.

Data are acceptable, and reported QC measures appear to be adequate. The following sections discuss the data review and validation.

Holding Times and Preservation

The samples were prepared and analyzed within the prescribed holding times and properly preserved.

ICP-MS Instrument Tune

The instrument tunes met all QC requirements.

Calibration

The initial and continuing calibrations met all QC acceptance criteria except as noted above in the Summary Section.

Reporting Limit Verification

All CRA/CRI recoveries met QC acceptance criteria.

Blanks

No target analytes were detected in the blanks except as noted above in the Summary section and the following.

ICP-MS:

In EB sample 302788-017 from COC 614080, Cr and Ca were detected. However, these sample results were qualified U due to blank contamination and, therefore, will not be applied to sample results.

ICP -MS Internal Standards

All internal standards met QC acceptance criteria.

Matrix Spike (MS)

All MS recoveries met QC acceptance criteria.

ICP-MS:

The parent sample concentrations for Ca, Mg, and Na were >4X the spike. However, an MS analysis is not required for Ca, Mg, and Na. Therefore, no sample data will be qualified.

Laboratory Replicate

The replicate analyses met all QC acceptance criteria.

Laboratory Control Sample (LCS)

All LCS recoveries met QC acceptance criteria.

Detection Limits/Dilutions

All detection limits were properly reported. No samples were diluted with the following exception.

ICP-MS:

All samples were diluted 5X for Ca due to over-range concentrations. All associated matrix QC samples were analyzed at relative dilution factors $\leq 5X$ those of the samples.

ICP Interference Check Sample (ICS A and AB)

Results of the ICS A and AB analyses were not evaluated because the concentrations of Al, Ca, Fe, and Mg in the samples were < those in the ICS solutions. No sample data will be qualified as a result.

ICP Serial Dilution

All serial dilution %Ds met QC acceptance criteria.

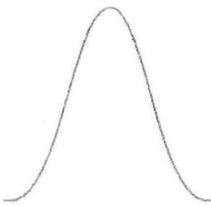

Other QC

A field duplicate pair was submitted on the COC. There are no “required” review criteria for field duplicate analyses comparability. No sample data will be qualified as a result.

No other specific issues that affect data quality were identified.

Summary

Two samples were prepared and analyzed with approved procedures using methods EPA 901.1 (gamma spec), EPA 900.0 (gross alpha/beta), and HASL 300 (Iso- U). Problems were identified with the data package that result in the qualification of data.

Gamma Spec:

1. No peaks were detected for K-40 in sample 302859-024 and, therefore, it will be **qualified BD, Z2**.
2. The K-40 result of sample -011 did not meet peak identification criteria and, therefore, will be **qualified R, Z2**.
3. All other gamma spec sample results were either < the associated 2-sigma TPU or < the associated MDA and, therefore, will be **qualified BD, FR3**.

Gross Alpha/Beta & Iso-U:

1. The U-235/236 result of sample 302859-013 and all gross beta sample results were > but <3X the MDA and, therefore, will be **qualified J, FR7**.

Data are acceptable, and reported QC measures appear to be adequate. The following sections discuss the data review and validation.

Holding Times and Preservation

The samples were analyzed within the prescribed holding times and properly preserved.

Quantification

Quantification criteria were met except as noted above in the Summary section.

Calibration

The case narratives stated that the instruments used were properly calibrated.

Blanks

No target analytes were detected in the blanks at concentrations > the MDA and 2-sigma TPU.

Tracer/Carrier Recovery

All tracer/carrier recoveries met QC acceptance criteria.

Matrix Spike (MS)

All MS recoveries met QC acceptance criteria.

Gross Alpha/Beta:

It should be noted that the MS analyses were performed on SNL samples of similar matrix from other SDGs. No sample data will be qualified as a result.

Laboratory Replicate

All replicate error ratios met QC acceptance criteria.

Gross Alpha/Beta:

It should be noted that the Replicate analyses were performed on SNL samples of similar matrix from other SDGs. No sample data will be qualified as a result.

Laboratory Control Sample (LCS)

All LCS recoveries met QC acceptance criteria.

Detection Limits/Dilutions

All required detection limits were met. The samples were not diluted.

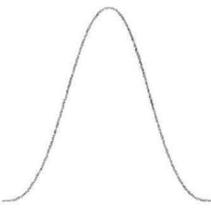

Other QC

One EB, samples 302788-025 to -027, was submitted on COC 614080. A field duplicate pair was submitted on the COC. There are no "required" review criteria for field duplicate analyses comparability. No sample data will be qualified as a result.

No other specific issues that affect data quality were identified except as noted above in the Summary section.

No target analytes were detected in the blanks.

Surrogates

All surrogate recoveries met QC acceptance criteria except for the following. The 2-fluorophenol surrogate %R for the MS sample was < the QC acceptance limit. Since this is a QC sample, no sample data will be qualified.

Internal Standards

The internal standards met all QC acceptance criteria.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The MS/MSD analyses met QC acceptance criteria. It should be noted that the MS/MSD analyses were performed on an SNL sample of similar matrix from another SDG.

Laboratory Control Sample (LCS)

All LCS recoveries met QC acceptance criteria.

Detection Limits/Dilutions

All detection limits were properly reported. The samples were not diluted.

Tentatively Identified Compounds (TICs)

TIC reports were not required.

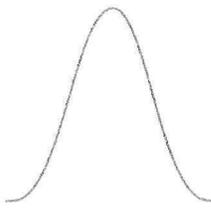

Other QC

One EB, sample 302788-016, was submitted on COC 614080. A field duplicate pair was submitted on the COC. There are no "required" review criteria for field duplicate analyses comparability. No sample data will be qualified as a result.

No other specific issues that affect data quality were identified.

Memorandum

Date: June 19, 2012
To: File
From: Ken Salaz
Subject: GC/MS Organic Data Review and Validation – SNL
Site: SWMU 68 GWM (ER)
AR/COC: 614081
SDG: 302859
Laboratory: GEL
Project/Task: 98026.01.13
Analysis: VOCs

See the attached Data Validation Worksheets for supporting documentation on the data review and validation. Data are evaluated using SNL/NM SMO AOP 00-03 Rev 3.

Summary

Three samples were prepared and analyzed with accepted procedures using method EPA 8260B (VOCs). All compounds were successfully analyzed. No problems were identified with the data package that result in the qualification of data.

Data are acceptable, and reported QC measures appear to be adequate. The following sections discuss the data review and validation.

Holding Times

The samples were analyzed within the prescribed holding times and properly preserved.

Instrument Tune

All instrument tune requirements were met.

Calibration

All initial and continuing calibration QC acceptance criteria were met with the following exceptions.

The initial calibration %RSD for bromoform was >15% but <40%, the ICV %Ds for chloromethane and bromomethane were >20% but <40% with negative bias, and the CCV %Ds for carbon disulfide, vinyl acetate, 2-butanone, and 2-hexanone were >20% with positive bias. However, the associated sample results were non-detects, and no other calibration infractions occurred for these analytes. Therefore, sample data will not be qualified.

Blanks

No target analytes were detected in the blanks, except for the following. Bromodichloromethane, chloroform, and dibromochloromethane were detected in the EB. However, the associated sample results were all NDs and, therefore, will not be qualified.

Surrogates

All surrogate recoveries met QC acceptance criteria.

Internal Standards

The internal standards met all QC acceptance criteria.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The MS/MSD analyses met all QC acceptance criteria.

Laboratory Control Sample (LCS)

All LCS recoveries met QC acceptance criteria.

Detection Limits/Dilutions

All detection limits were properly reported. The samples were not diluted.

Tentatively Identified Compounds (TICs)

TIC reports were not required.

Other QC

One EB, sample 302788-015, was submitted on COC 614080. A field duplicate pair was submitted on the COC. There are no "required" review criteria for field duplicate analyses comparability. No sample data will be qualified as a result.

No other specific issues that affect data quality were identified.
